Wanted- Old Police Motorcycle Radios and parts
I am looking for ANY and ALL vintage police motorcycle radios and parts of same. Anything pre 1965 is of inteers and the older the better. Most of these units were motorola's but others were RCA, Avia, Link Vetric. You got it, and I want it. Also interested in old police motorcycle sirens. Email me at mark@linkcycles.com
Thanks
Mark

## 2. Re: TS-830M info

Source record: 46230

The Kenwood specs for the rig and the scope pattern both agree with
your statements.

At 80 to 90 watts input (900V at 100mA), the output is right at 30 watts
into a 50 ohm load.

When modulated at 100% the total power delivered is right at 4X
the carrier (120 watts).

I have used the rig on 75 and 10 meter AM now for some time and the
signal reports confirm that the audio sounds very good. The reporting
stations could not tell that this was not high level modulation. The mic
being used is the Shure 444.

Thanks for the confirmation on the setup for AM.

Message-ID: <a0ramc$aec$1@news.chatlink.com>
Source record: 46232

I stumbled across a package of two new Weller No. 7250 soldering gun tips (used on the beefier Weller D550 gun). They are 3 3/8 x 7/8-inch in size.

I would like to trade for a pair of the smaller No. 7135W tips used on the Weller model 8200 gun.

I'd reccomend getting either Sprague or Cornell-Dublier caps as they
hold up much beter than the japanese made electrolytics. They also tend
to be bigger too. Just wire them in and you should be in business.
Just don't have a lot of extra capacity, as that may exceed the peak
current of yuor vacuum tube rectifiers.

Did Philmore even put the number on it? This is a three tube(50C5, 12AU6,
35W4) regenerative receiver kit. It has two bands, .55 - 1.65, 3 - 13MHz.
It's on page 450 of Osterman's "Shortwave Receivers Past & Present" book.

Good Luck!

Frank Dresser

## 11. Source for Tube Extender?

## 14. FS: Viking Valiant I (W4PNT paint)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-01 17:21:35 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3C31F01F.4E7126BC@erols.com>
Source record: 46242

I have a fully operative Valiant I to sell. After much deliberation, I've decided that one Valiant is enough. This one has a new panel and cabinet from W4PNT and has most of the "ER" audio mods. The VFO resistor has, of course, been changed. I have a folder of all documentation, also. This particular one is used regularly on 40 and 75 meters. I'm asking $600 for it (the paint was $275). I'll also include the 2-pin Amphenol mic plug and a spare set of finals. The catch on this one is that I won't ship it. After receiving 2 destroyed Valiants, I've learned that they're not happy with being stuffed in a box and sent off to the the Hinterlands. I'd be happy to demonstrate the rig at my QTH and/or deliver/meet a couple of hours distant from the MD/DC/NoVA area. I'll also consider trades for other AM transmitters of equal value (or I'd be willing to trade up), especially military (GRC-19, for example). If your interested, let me know. Thanks, de Jeep/K3HVG

Source record: 46157

I would think that they are definitely worth something to someone depending upon what types of radios and/or TVs or CBs or auto radios they cover. You might consider donating them to the local public library rather than using them for fire starting material.

<<Have a collection of around 700 in good condition are they worth anything more than fire starting material?>>

Take a look at ebay. If you do a search on "sams photofact" you get about 150 items listed so there seems to be some activity. Depending on what they cover there are lots of groups and collectors of older equipment that would also be interested.

Gary.

>they will not sell to anyone who has ANY negative comments.....
>
>AND, you will be unable to sell anything to the thousands of people that will
>never bid on an item from someone that has ANY negative comments.

I have seen some sellers/bidders that make such statements, but they
never seem to follow them 100%.

I have 1 negative feedback - which I received as a buyer several years ago.
I also have 3 feedbacks (all were positive originally) from people who are
no longer registered - so Ebay in their wisdom changed them to neutral.

Bidders that state that they will not bid on any item being sold by a
seller with negative feedback have bid on my auctions. And sellers who
say they will not accept bids by anyone with negative feedback all seem
to accept my bids - even with the one negative.

I think most just use it as a selective filter - an excuse to reject
a bidder if something does not look/feel right about their bidding
pattern.

I actually feel that most feedback should be neutral, unless something
exceptional was done by the bidder or seller. Positive feedback is almost
meaningless.

> winning the bid? In my post I said "bidders with negative feedback, go
> away". That didn't work... :(

You cannot, if they wait until the last to make their first bid. But
if they bid earlier, Ebay provides a mechanism to block certain bidders
and cancel their bid. I have done so one one bidder who had made 4 bids
and received negative feedback on all 4 bids - refusing to pay for any
of the items he won.

You can even refuse winning bids from such bidders - at the risk of
getting negative feedback from them.

According to the manuals, the IFs are the same, Mike - 1650 KHz and 50.5
KHz. The alignment instructions are identical.

## 39. 51J1 - VALUE FOR INSURANCE ???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-02 14:11:57 UTC
From: wrhood@exis.net
Message-ID: <3c3314c5.4332763@news.exis.net>
Source record: 46167

51J1 - VALUE FOR INSURANCE ??? I recently obtained a Collins 51J1 receiver, the serial number of #4 is stamped on the back of the chassis. After some cleaning and slow power up, it came to life on all bands. CCA condition is "Good Condition" ++, I have found an SO-239 added to the rear and it goes to a cap that is not connected. We know that insurance companies say that an old radio is worth less than the deductible. Therefore I would like to have comments to support a value, based on the collectors value that this radio has, in case it is lost. Thanks, Sonny, K4WYS

## 40. Re: 51J1 - VALUE FOR INSURANCE ???

Newsgroup: rec.radio.amateur.boatanchors

Source record: 46168

Get some prices that have sold on E-bay, and other places, then go to the insurance company, and explain that the unit is a, "collectible", they know about those, just like an "old" painting, or antique furniture, etc. The value that it should be insured for, is the amount needed to replace the unit, should it be lost, stolen,burned, flooded, etc.
Bottom line, anything can be insured, the price/premium/value, wil vary from one company to another.

# 48. Hallicrafters S-120 questions

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-02 19:24:32 UTC
From: kd7cdg@arrl.net
Message-ID: <Xns918A7FF2Fhatchdavidticom@157.170.133.115>
Source record: 46177

Greetings all,
I finally found a moment to dig into my Halli S-120. I downloaded a
manual/schematic from BAMA.

First complaint was an incessant 'motorboating' unless there is a
strong signal present. I understand that's usually caused by bad filter
caps, but they are all new. The selenium rectifier had been changed to
silicon, so the tubes are running a bit 'hot'. The 130V point is closer to
170V. The filter caps are rated 350V, so they didn't pop.
The 'motorboating' goes away when the BFO is turned on.
Several years ago I built a 120V DC supply (the radio is rated AC/DC)
and there was no low frequency oscillation.

After poking around to check things, I noticed some inconsistencies
in the schematic vs. actual components. They seem to all be int the audio
portion of the radio. On the schematic they are marked 'Part of Couplate
049-000225'. And what is actually in the radio is different. I can come up
with a list if anyone wants.

Ideas?

If I recall corrrectly, motorboating can be caused by a defective bypass
cap on the cathode of the audio output tube. Since it's an
electrolytic, they often fail on older radios.

Source record: 46180

I work for the Salvation Army . While stopping by the Salvation Army Thrift Store at lunch I saw a Oscilloscope sitting on the shelf . I bought it for $4.00 ! Yep, now it's sitting in the shack . It lights up but, hasn't been tested . It's in really good shape . No bad scratches dents or dings . The leather handle on top is really cracked and dry rotted , but it's still strong . All the white lettering is still good . Some of the Black plastic on a few of the knobs is cracked and chipped off . The paint on the chassis is dark green and there's no rust . Can anyone tell about how much this is worth ?? The metal plate on top of the scope reads :

Oscilloscope, VHF
made for
Federal Aviation Agency
Type FA-5196A Contract FA-878
Serial No. 509
Benrus Watch Co., Inc.
Watersburg, Conn.

Right, but I wouldn't trust any of the paper caps, either. Motorboating is a low frequency oscillation usually caused by a higher than normal common impedence. You say the electrolytics are all new. Are they all the correct value? No wiring errors? Motorboating can also be caused by replacing the coupling caps with much larger ones. Not likely, but don't take anything for granted. Is this a true hot chassis set, or does it have a floating ground? A

floating ground uses a common wire for the B- return and the chassis is isolated. If any of the electrolytics are connected to the chassis of a floating ground set, they are out of the circuit.

Frank Dresser

If it works, and gets a trace, and you have a use for it,
you got a fair deal.

If it doesn't work, perhaps you can use the case to put
something interesting into. The case alone is probably
worth a lot more than $4 as a project box.

However, if you have no use for it, you have just another piece of
junk that you paid not much money for, and can maybe trade
to someone for something you need after it sits on your
shelf for 5 years.....

Been there, done that, got the T shirt......
..... and I'm still doing it !!! (grin)

Some of us just can't resist..... Good Luck.

The original component is a 33 ohm 1 watt carbon composition resistor.
Heath part number was 1-14-1.

There is also a resistor in parallel with the relay coil. It is a 2000 ohm
7 watt part.
Heath number was 3-14-7.

Source record: 46191

I recently sold one of thes on eBay, and the purchaser is wondering how to connect it to the FT-101. Anybody here have one, or remember from the past? The ads in QST said each model was supplied with the needed, mating connector.

Apparently the original Ameco literature doesn't specify it, but there's
an exact replica project floating around the internet and it calls for a
320vac secondary (unloaded) on the pwr xfmr.

Yep. At one time, it was worth at least $4.00.

But, seriously, I don't know anything about this particular scope, but, if it works, you've got a bargain. I paid $100 for a TEK 561A. It works and does what I want to do (for the most part), but I think I overpaid. Wish I could have found a $4 bargain-basement special, but, search as I did, I didn't come up with anything I thought would work for me.

Good luck with it.

Barry - N4BUQ

## 72. Update-SAM's PHOTO FACTS Collection

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-03 05:34:28 UTC
From: K6ME <k6me@adelphia.net>
Message-ID: <E3SY7.1062$gO5.684700@news1.news.adelphia.net>
Source record: 46099

Thanks to all those that posted/emailed recommendations and information.

I did a reasonably good inventory of this Sams Photofact Estate collection today.

Set begins in 1946 with # 006 as 82 of the first 100 are missing.

Second set from 1950 beginning with #103 as 30 of 100 are missing.

Photo Facts beginning with number 201 through 699 "appear complete". #699 is dated 1964.

Missing Sets can be found on e-Bay, prices range from 25 cents to over $10.00 per folder?

Sets contain large and small table-top/consol/floor Radios, Phonographs, Amplifiers, large and
small Tube-TV's, Updates, etc. etc. Majority are as unused, in original sleeves and
look to have never been exposed to moisture. Some wrinkles on exposed folder ends.
I can provide more particulars and pictures via email if needed.

Sets are in I believe in Ten 14"x24" Cardboard boxes probably weighing about 30 pounds each
and are located in Susanville, CA. 96130 ( 80 miles NNW of Reno, NV on US-395)

Would prefer to unload whole collection together and not ship. Could meet in Reno, Sacramento,
Redding or Klamath Falls if offered reasonable price.

Thanks: K6ME, Terry

## 73. Sharp Multiband Deluxe

Its billed as a 15 watt (input) transmitter.
320-0-320 is really pushing a 6X5, but assuming thats a reasonable
number (once loaded) that comes to 50 or so ma...again pushing a 6V6 to
the max. From what I read, the typical output seems to range 5 to 8
watts.
One article mentions 40ma with a fresh 6V6 giving 5 watts out and 22ma
with an old 6V6 giving 2.5 watts out.

I have a large choke that measures 7.40H on a HP 4260A universal bridge
It appears to be out of an AM transmitter. It's about 6" tall, and 4.5" on each side, with two insulated stand offs at the bottom about 3/4" spaced apart.
Would this be in a plate modulated setup?
Thanks,
Dave/NS8S

Source record: 46111

Update on the Hallli S-120:

I replaced the cathode bypass on the audio power amp with a brand spankin'
new tantalum. Still motorboats. The main bulk filter caps are as follows:
Specified Replaced with
60 uF 66uF
40 uF x2 47uF x2
Shouldn't be much of a difference there.

I don't think this is a true 'hot chassis' radio. The schematic specifies
'ground' and 'chassis', with one of the antenna terminals to 'chassis'.
There is a 470K paralleled with 0.047 uF from 'ground' to 'chassis'.
All of the tuned input sections are connected to 'chassis'.
There is one screen on the I.F. amp tube (12BA6) tied through a 0.005uF
cap to 'chassis'.

I'm thinking that because the motorboating goes away with a strong signal,
there may be an issue in the AVC portion.

I still have no idea why actual circuit components don't match the schema.

Looks just fine. I'll assume they are grounded to the ground bus rather than the chassis. Also, It's worth checking to be sure the electrolytics are grounded to the same lugs as the originals. You want to avoid making a ground loop. Don't forget to check all voltages with reference to the ground bus rather the chassis.

>I don't think this is a true 'hot chassis' radio. The schematic specifies

>

Maybe. But because the gain goes down with increasing AVC voltage, the AVC may just be calming down the motorboating stage(s). Pure guesswork there. What is the AVC voltage range from a weak to strong signal? It's almost certain all the paper caps are in poor condition now and are worth replacing. Watch for caps replaced with wildly incorrect values. Mid '50's to '60's paper caps were usually encased in a tubular plastic shell. They still deteriorated about the same.

>I still have no idea why actual circuit components don't match the schema.
>--

Production changes? Repair with available parts? I'd check(change) the paper caps, and check for correct grounds and other possible wiring errors first. If that doesn't do it, it's worth another look.

5 years must be some sort of industry standard. I was given a piece of metalworking equipment (a South Bend 7" shaper) in what might be called "tentatively repairable" condition; my wife permitted it into the garage on condition that it has to produce a part within five years, or it's out of there. I thought the terms quite generous.

Ah, my first transmitter...I will guess 300-350 V. About 1975, I gave mine to classmate John WB8TTP; find him, he may still have it and can measure the voltage. It would be not unexpected of him!

Anyone know what the upper frequency limit (Vert amp) is of this old timer? When I tried to monitor my 75 meter sig it looked like the vert amp was rectifying instead of amplifying. Could it be that the freq limit is less than 4 mhz? I can go direct to plates but I don't like to have to tune a l/c to get the display height.

TIA Tony WA6LZH

Sounds like the IF is going into oscillation. As it does it generates AVC voltage which reduces the gain and stops the oscillation. When the AVC bleeds down the gain goes up and oscillation starts again. Look for AVC line bypass caps bad. Also some receivers used a "gimmick" capacitor made of a couple of turns of wire, to get enough feedback in an IF stage to be used as a BFO. This may be coupling when not wanted. Also a bad screen bypass cap can cause oscillation in the IF stages. Turn the audio gain way down and see if it still motorboats. If it quits the feed back may be on a power line (B+) which would mean a bad bypass cap probably on a voltage divider resistor.
It is better to try to find where the problem is than just replacing everything. first it is fun and second you learn how the thing works.

Source record: 46121

Hi Bob,

The #1254 I believe is a Weston/Schlumberger part number.
I do know that Weston/Schlumberger #1252 was labeled Heath/Schlumberger SM-118 so I assume the #1254 is the same as Heath/Schlumberger SM-128.
If they are one in the same which I think they are, then you have a 7 digit auto ranging counter good for 110 mHz.
The trouble with these units is they incorporate intelligent displays and naturally they have been obsolete for years. If you look inside you will only see about a dozen or so ICs because the rest of the circuitry is inside the digits. Pull off the front panel and you will see what I mean. Nearly every one I have heard about has trouble with these displays, including me. I have an SM-118 gathering dust.

I'm not sure what kind of information your looking for, but I have a schematic for the SM-118 and catalog with the specs for the SM-128.

Regards,
Gary.

As I'm finishing up my 51SB-B, I've a question to thow out to the group.

What type of SSB generator will produce the best sideband suppression,
filter or phasing?

I've several old ARRL handbooks and they address the cost, ease of
adjustment etc of both types, but really don't say which is better
at sideband suppression. They indicate both are equal.

OK, maybe that's what ought to be, but what have some of you
found to be realistic?

Well not likely as a Heising modulation choke, if that is what you
mean. How does it "appear to be out of an AM transmitter"? It could
be a typical supply choke for almost anything including a rcvr. Can
you discern whether it is a swinger?

I'd vote for considering the specifications of the filter (bandwidth vs suppression) vs the specs on the phasing option. At some point its going to be the "phase" accuracy (eg. how much is 90 degrees out/in of phase vs. 89.9 or so, whatever) vs how narrow, how steep, and how deep the sides are on the filter.

The caveats are: i) what are these specs compared to the FCC purity of signal minimums (and...is anyone measuring these?), and ii) why do you want to get the answer to this question? I thought all present ham rigs are filter so from a practical viewpoint, its a moot issue. No?

Probably because of the wide fluctuations caused by location, condition,
and whoever is interested
in buying that particular unit at that instant in time. One only has to
look to eBay for the ridiculous price
extremes to realize how hard it is to nail down the "worth" of an item these
days.

Personally, I'd think a 51J1 in good condition is worth about 200 dollars.
Thats MHO, your
mileage will vary....

## 105. Re: Phasing Type SSB Generators

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-04 01:18:41 UTC
From: Gary Schafer <gschafer@mediaone.net>
Message-ID: <3C350259.B8890EF9@mediaone.net>
Source record: 46133

Hi again Mark,

Theoretically a phasing rig could have infinite side band suppression. However that would require a perfect audio phase shift network that would maintain it's phase shift constant over the whole audio range. If it would maintain 90 degrees from 0 to 3000 cycles and you limited the audio to 3000 cycles you could get nearly perfect side band suppression. This comes with a few more ifs though. Some distortion products will show up on the unwanted side band. Any drift in the RF phase shift network will degrade side band suppression.

The audio phase shift network is the worst offender. That is one reason that the bandwidth of the audio is limited somewhat. Usually 300 to 3000 hz. As you get closer to 0 hz it is much more difficult to maintain the desired phase shift. It is possible to build modern phase shift networks that perform much better than the ones used in the old SSB rigs.

If you had a perfect filter with straight skirts, in other words the bandwidth at 3 db down was 2 kc and the bandwidth at 60 db down was also 2 kc, then you could approach ultimate side band rejection. However, the filter would probably ring badly and cause rather bad phase shifts that would show up as distortion products on the unwanted side band. Also other distortion products get through and show up on the unwanted side band too.

With common filters where there is some slope to the filter skirts the carrier is usually set so that it is about 20 db down on the filter skirt. This insures that the lower audio frequencies of the unwanted side band are sufficiently attenuated. If we had a perfect filter we could set the carrier right at the edge and the filter would take care of the low frequencies. Again the fact that filters do have some slope on the skirts is one reason that the low audio frequencies are rolled off in transmitters. This helps the side band suppression at low audio frequencies. DSP filters do a better job than mechanical or crystal filters in this respect. They can be made with very steep skirts without the ringing problems.

To answer your question about older rigs, filter verses phasing, the filter rigs do a much better job of unwanted side band suppression. But it is still important for the distortion products to be held low or it can degrade either type of system.

One of the reasons for the popularity of the phasing rig was its low cost compared to the cost and availability of filters. In the early days filters with good response were mostly low frequency. Some around 60 to 100 kc. They were expensive and it was more difficult to convert the low level low frequency signal up to the band you wanted. The phasing rig could be built with much cheaper parts and could be done at higher frequencies which were

much easier to convert to the wanted bands. Some phasing rigs like the B&W and Heath SB10 generated the SSB signal right on the wanted frequency and eliminated the need for any frequency conversion. Much simpler. (But these rigs also suffer from not being able to maintain the RF phase shift as well over the wide frequency range they operate on)

When Collins came out with their line of mechanical filters they were relatively inexpensive for the quality. Then it became more cost effective and simpler to go the filter route and they provided excellent performance. Early crystal filters were made also but they were difficult to align and get good flat response.

The circuits you see in the old handbooks for phasing systems won't come close to a brute force filter system for sideband suppression.

However, there is a lot of work being done using digital circuitry to control
the RF 90 degree phase angle to an very tight tolerance, and modern IC based audio phase shift networks can give some surprising results. Do a search on articles in QST for the past several years.

> want to get the answer to this question?

I would think that he is interested in learning.

> I thought all present ham rigs
> are filter so from a practical viewpoint, its a moot issue. No?

No. All ham rigs are not filter rigs. There are lots of guys that build
phasing type rigs as well as filter rigs. Especially with some of the newer
networks that are available a very good phasing rig can be built.

>

Why? Because I want to know! Isn't that reason enough?

I was born in 1958, and didn't get my novice until 1973 -- well
after the era of phasing type SSB generators. I'm aware that
they were used in the mid 1950's to mid 1960's, and then
where no longer used as the filter type took over. I can read
the old literature, but I welcome input from those with the practical
knowledge.

Restoring a radio is, to me, not only getting it on the air but
understanding how it works, any interesting design features it has,
it's place in the evolution of amateur equipment etc.

Seen this done, if you want to try. Take a non working tube and with
a glass cutter remove the housing then snip off the inner works. Epoxy a
standoff in the middle and with silver solder connect wires to a socket mouned
on the standoff. Hard to describe the whole mess, but worth thinking about it
as a do-it-yourself challenge. Must be careful to remove the sharp glass edges.

As the soon to be proud owner of a vintage R-392, I would like to get info on where to obtain the correct power INPUT connector. The TM only specifies a ready made gov.issue cable assembly. The call out for connector is Amphenol 164-4Fs.

I have the following:

1 - FT-101EE no processor, good to excellent condition, restored and
realigned by me, excellent working condition
2 - Spare finals
2 - Landliner Speaker/Phone Patch, 1 fair to good, one good to excellent
1 - FV-101 Remote VFO
1 - YC-101(?) Monitor Scope excellent condtion

The rig is in air conditioned storage for the last 6 months since I restored
it.

I was planning to e-Bay it. If interested, make me an offer.

You can't outbid yourself. She was (and did) trying to overcome the
whipdesnap guy's earlier bid. He probably just typed in a silly high
number thinking that the rig would climb up to about 900 and everybody
else would bail out. Very likely he would be s***ting bricks had
pizzagrl stopped at 3750.

There was a receiver construction article in QST several years ago (mine
still isn't finished) which used contemporary precision components to
achieve excellent sideband suppression and single-signal reception. The
author's contention was that the components available in the 50s and the
heat from tubes pretty much made impossible to build a stable phasing
SSB generator. If you want more information, Mark, let me know and I'll
get it to you.

I've had the experience of bidding, say, $20 for something, and then
thinking later that I should have set the high bid a little higher -
like $25.00. Then when I bid the $25, sho nuff, the high bid jumped to
$21.00 - $1 (minimum bid) higher than my previous high bid. So you can
bid against yourself. Needless to say, I did it only once.

Hi, I have a nice set of drake twins. T4XB transmitter, R4A Receiver.
Have replaced the output and driver tubes in transmitter. Both units
have been algined by KG4H. Also have power supply for transmitter
new caps etc. in it, been rebuilt. Both units have had the blue filters
replaced on the vfo's and meters. the T4XB is orginal piant,
copper is nice.Face is really nice. The R4A has been repainted the
faceplate does show some paint fade no scrathes or letters rubbed off,
copper need some cleaning. Have made up proper jumper cables
RG-174u,
not the cheap phono cabes. Also included is a Brand new Shure 450 Hi

Impedence desk mic. The R4A has the following extra crystals
12.5,13.0,29.1,36.6,37.6,38.1,39.1 in addition to the factory stock
10-80.
The T4XB has the following extra crystal 37.6 in addition to factory

stock 10-80. Full output on all bands since new tubes were put in the
transmitter. These units work really well together. All knobs are in

good shape feet also doubled up to give rise on front. These units are
ready to go on the air been using them nightly. work perfect. Been
out of work for a bit so need to sell some excess gear. asking 500.00 +
shipping.
OBO You won't be disapointed. will not separate sold as package deal

only.

A classic "it depends" question.
>
>I've several old ARRL handbooks and they address the cost, ease of
>adjustment etc of both types, but really don't say which is better
>at sideband suppression. They indicate both are equal.

With the technology available when those Handbooks were written, that's
correct. In those days 4 pole xtal filters were common.

Using "classic" components, 40 dB of suppression was about the best that could
be obtained from a phasing exciter. Early filter-type exciters were about the
same. As xtal and mechanical filter design progressed, filters won out.
>
>OK, maybe that's what ought to be, but what have some of you
>found to be realistic?

See above. The stability problems of phasing exciters posted by others are real
- the tolerances on the phase-shift components are very tight.

Some time back I posted a description of "what's in a 2Q4/350" if anyone is
interested. (see google). The packaged audio phase shift networks were popular
because most hams didn't have the necessary test equipment to make their own.
Packaged xtal filters took over for the same reason.

The development of the SSB transceiver and matching TX/RX pairs that would
transceive in the late '50s and early '60s (Cosmophone, Collins S-line, Drake
4 line, etc.) dealt a heavy blow to the phasing method. No fussy or critical
adjustments after the rig was aligned and automatic zeroing when you tune the
received signal correctly. The phasing method quickly disappeared from
manufactured ham gear in the early 1960s.

The R2/T2 rx/tx pair are an example of what can be done with modern components
using the phasing method.

On a historical note, SSB dates back to 1915 in theory and the 1920s in
practice. The first transatlantic telephone system used a filter-type SSB

system on 55 kHz. Went into commercial operation in 1927. Why SSB and not AM? Besides the S/N and high power transmitter cost differences, there was the problem of antenna and transmitter bandwidth at 55 kHz.

First ham use of SSB began in the early thirties, led by Ray Moore, W6DEI. At least a half dozen SSB ham stations were on the air before 1934.

Widepread ham use began in the late '40s, sparked by the development of practical audio phase shift networks and practical filters based on surplus crystals. The Collins mechanical filter pushed SSB progress in a big way, too.

This should only happen in two cases:

You hadn't hit the reserve yet and the new higher bid meets or exceeds the reserve, ebay will take you up to the reserve.

You were less than a full bid increment above the next bidder (i.e. you had bid 20 max, someone else had come along and bid 20, leaving you high bidder at 20) - then you raise your max to 25, ebay will increment you up to 21 (one bid increment over the next bidder). If your max had been 20, but the high bid was only 15, and you raised your max to 25, nothing should happen.

Dave

Also there were a number of articles in "Radcom" - the Radio Society of
Great Britains magazine - concerning phasing SSB systems. One design by
G3TFL measured 60dB rejection over it's working range using standard
R and C values. Look also for designs by G3PLX who's done much work in
this field.

I have for Sale: Phillips JAN 5763 NOS

Tested and matched on my calibrated TV-7D/U tester. These tubes are New-In-Box and very new looking and testing. Perfect in all regards.

Matched quads (4 tubes) for only $9.99 per set, plus postage. Postage is USPS Priority Mail only (no handling fee). Foreign orders welcome, shipping will be by Small Packet Air Mail.

These tubes are all strong testing and each quad measures within 1 point of each other on my calibrated TV-7D/U.

These are Phillips ECG, USA, white box. Box says 8/85 - perhaps some of THE last tubes made in America??

I guarantee these tubes to test new or your money back.

Here is a picture of one:

Source record: 46015

Much more recently and further away from home was an article in QEX by a nice young Aussie with an innovative mind. "The Bedford Receiver" by Rodney Green. I built it in it's entirety and have it exhibiting 60 dB of opposite sideband suppression although there ARE two phase shift networks. Also 50-51 op-amps as I recall.

I made my own eight-pin extender from a socket, base, and some wire (see SX-28 article at http://antiqueradio.org/halli12.htm ). I later bought a set of about a dozen assorted extenders from a guy. Naturally, I haven't needed to use any of 'em since then!

Regards,

Phil

A good modern filter can give excellent sideband suppression (60 plus
dB...), whilst practical phasing modulators usually can't go beyond 40 dB...
A better result can be achieved using a Weaver phasing modulator, given that
carrier phasing is done by digitally generating carriers (by means of Gray
dividers, a method which is described by Horowitz-Hill as "essentially
perfect"...!); anyway this amounts to using 4 mixers, and the sideband
suppression instance is just displaced to the difficulty of creating a
couple of *identical* filters, and to get a suppression better than 40 dB
you need very high precision components and very accurate design...
I'm designing such a modulator, but sometimes I ask to myself if it's a
sane idea... :-)

Bye.

I think there is another phasing option that has not been mentioned yet. I believe the Kenwood TS950SD was actually capable of using either method. The base rig uses the conventional filter method. With the DSP option, it offers the Phasing method. The DSP provides the audio phase shift with much better performance than old style phase shift networks. The overall carrier/opposite sideband suppression specs are better with the DSP Phase shift method than with the filter method.

My first 6M SB rig was a 100Watt balanced modulator - nobody ever noticed that it was DSB as long as the carrier was well down.

You have a pair of variable mu compressors that are very similar in design and function to a Gates Sta-Level and a wide number of other compressors from the same era, mid 1960s. The value is rather hard to pin down. A Gates Sta-Level generally goes for about $800-900. the famous Fairchild 670 uses the same technology but is far more sophisticated and is a "holy grail" compressor that sells for around $25,000 now-a-days. The rest of the Sta-Level style compressors go usually for a bit less than the Gates does, simply because they're less widely known. One exception would be the RCA BA-25 which I recent sold for over $2000 for a pair. But CCA is a fairly obscure brand that is reputable among those who are familiar with them. Most of these units were built as broadcast limiters, and so their frequency response and distortion figures are not stellar but their output drive capability is astonishing. A lot of them had a pair of 6V6s on their line-level outputs which needless to say could drive a pretty respectable level into 600 ohms. Many transmitters required this, but of course it's overkill in the studio where these thigns go today. Your unit, however, has a more reasonable 12BA7A on the output, suggesting maybe it was intended for studio use all along. I don't know for sure.

If you're interested in what's going on inside, I'll tell you. The 6386 vari-mu tube is probably the first tube after the input transformer. The 12AT7 could come first too though. The entire circuit is push-pull. Most likely the 6386 feeds the 12AT7 which feeds the 12BA7A which drives the output transformer. All symmetrical. A portion of the output of the 12BA7A is sent to the 6AL5 dual diode, which creates a negative DC voltage proportional to the audio signal. There is a bias voltage against it, generated by the 0C2 regulator tube, which establishes the threshold of compression. When the threshold is overcome, the resulting negative voltage is applied to the grids of the 6386 vari-mu tube, usually through the center tap of the input transformer's secondary. This increase in negative grid bias voltage decreases the gain of the vari-mu tube, causing a decrease in output level. Voila, compression. There are some capacitors and controls in the bias circuit to control attack and release time but otherwise it behaves like a straight line amp.

I could probably offer $500 for the pair, but you may get more for them if you shop 'em around.

If you want more info about these units, go to the waltzing bear website and look at the various schematics for similar units. The Sta-Level, RCA BA-6, some Altec compressors, and a bunch of Collins units are all at that site and you'll see they're all basically the same. The BA-6 and the Altecs use different vari-mu tubes, but the concept is the same.

http://www.easystreet.com/~audio

I hope this is useful.

Might be....

The coil turret is miss-aligned. Take the radio out of it's case. Flip it upside down and remove the metal cover in the middle. Now turn the bandswitch knob and you will see the turret is not sitting right at the stops.

Confirm by rocking the bandswitch knob between stop positions till actual signals ( WWV ) can be picked up.

You will have to loosen allen set screws on the shaft and realign the turret.

This is a pretty common problem with 600's. -Biz WDï¿½HCO

i have for sale a complete swan 500 station.
swan 500 transceiver 80-10 meters 70-200+ watts out depending on band.
looks very good for age. no knobs missing or extra holes. front panel is
nice. comes with w7fg copy of manual
117vc power supply. works and looks good. has muffin fan wired to jones
plug that sits on top of finals in the rig. has hook ups for a dsp 9 added
model 410 external vfo. nice condition. works well
model 22b vfo adapter. works well, for vfo
model vx-2 vox adapter. i have not done the wiring change inside the radio
for this because i did not use this rig or cw. mod can be done very easy.
Sure 444 desk mike with swan logo. good condition.
model fs-2 swan field strength meter. meter not cracked and has original
antenna, which is a rare find these days.
Swan model wm-3000 2000 watt meter. works and looks well.

best offer over $375.00. alot of equipment for the money. it took me
nearly three years to collect all this gear. hate to sell but have other
interests and too many rigs. pics can be seen at
http://home.earthlink.net/~ku4yp will sell to lower 48 only. actual packing
and shipping extra. the price is pretty firm but i will listen to offers.

thanks.

Dave,
Your response motivated me to actually look in the manuals and not work from memory. My Mark 1A manual (Pg 15) says 50.5kc for a second IF freq. and my Mark 2 manual (Pg 17) says 50.75 kc for the same IF setting. I crossed checked this with Moore's "Comm. Rcvrs" 4th ed. (Pg 52) in the listing for the various SX 100 variants. SX 100 = 50kc, SX 100 Mk 1A = 50.5kc, and SX 100 Mark 2 = 50.75 kc.
A couple years ago I wrote Ardco Electronic who purchased the publishing rights to the Halli manuals and they wrote back saying they did not know of any differences between the various versions. Later, when reading the Moore book I came upon the IF tweakings. I first saw the knob variations on a late run unit that was offered on Ebay. As with all production radios there probably is some slight resistor variations too. Happy DXing, Mike KF6KXG

Thanks, Mike. Apparently the Mk2 manual that I have is actually a
misnamed Mk1a manual. I did some looking around at other copies of the
Mk2 manual on the Web and on a CD, and they show the 2nd IF to be 50.75
KHz, as you say.

John, sounds like the local oscillator has stopped running.. if you have test equipment it would be easy to check,if you do not have sig gen ,scope,counter etc. you may have difficulty locating the problem.. change the oscillator tube , check to see that all tubes light up the filaments, check tube sockets to make sure that they are clean and tight. give it a good once over..clean all connections ,band sw and such.. good luck Harold W4PQW

I did some research for a project at work, using a Quadrature Modulator from Analog Devices. I believe it was and AD8346. Analog Devices specs the unit as having 35dB of opposite sideband supression, but I came up with an active driving circuit that would allow the chip to have 65dB of LO supression, and 60dB of opposite sideband supression. These specs were maintained from 4MHz to 1.5GHz.
Unfortunately, I can't reveal details of the circuit right now; it will have to go through our patent people first.

Greetings fellow Boatanchorers!

I've just managed to breathe some life into an Eico 723 Xtal controlled transmitter (circa 1960).

I had the same 60-watt rig in my first Novice station.

This rig has a definite chirp, but I can't recall if my original one acted the same.

Does anyone out there know anything about the Eico 723 - is the chirp just part of this rig's characteristics, or what needs to be fixed to get rid of the chirp?

Carl WA7CS
Pasco, WA
wa7cs@arrl.net

PS: I'm also in the market for a Hallicrafters SX-140 to complete my original Novice station.

Source record: 46057

As I understand the adjustment (and practiced it on my receiver), the adjustment is to simply rotate the vernier dial on the shaft of the VFO. There are two places this can be accomplished. The instruction manual suggests making the adjustment at the front end of the flexible coupling in front of the VFO unit. I was unable to loosen the set screws at this location so I removed the front panel (doesn't require removal of all controls - see instruction manual), loosened the set screws on the vernier scale dial and rotated the vernier scale dial on the VFO shaft extension. The difficulty with this latter method arises when checking the adjustment. You have to replace the front panel to do so!

Hi!

I've got an R-388 that is consistently off by 7 kc on all bands...

I've looked at the schematic, and see nothing obvious to adjust to bring
the
calibration back to where it should be - I am assuming that the thing
that needs
adjustment is the whaddya call-it - the VFO unit (Collins had a name for
it)?

If so, what's the proceedure, and where's the adjustment??

Please don't suggest the mechanical graticle adjustment...

I asked the person from whom I bought the manual about it, and he says
he has two versions of the Mk2 manual - one with a 50.5 KHz 2nd IF, and
the other at 50.75 KHz. So apparently it's not as clear cut as we would
like it to be.

The other question is - what was gained from these changes in the IF?

TS888 is old "Pack Set" we used to carry for work on teletype lines and hubs in the field. Great for 60/20 ma. loop tests, breaks line so we could hub up our own scope or line repeater for terminal tests. This was during the old DC loop days, before the phone company decided that data sets were the way to higher speeds and less maintenance. But, the old "green key" sets were fun to keep running.

DSP is really an interesting option, especially for industry standard, but I don't believe it is on any ham level, at least for the moment; it requires lots of know-how to put together a DSP system (and create related control software)...
BTW, an other option is the feedback method, but it works only for * very * narrow bandwidth.

> My first 6M SB rig was a 100Watt balanced modulator - nobody ever
> noticed that it was DSB as long as the carrier was well down.

That's a big mouthful... May be they were all distracted by gorgeous females bypassing... >:-)

Hi, I have a nice set of drake twins. T4XB transmitter, R4A Receiver.
Have replaced the output and driver tubes in transmitter.New tubes. Both
units
have been algined by KG4H. Also have AC-4 power supply for
transmitter
new caps etc. in it, been rebuilt. Both units have had the blue filters
replaced on the vfo's and meters. the T4XB is orginal piant,
copper is nice.Face is really nice. The R4A has been repainted the
faceplate does show some paint fade dark grey area not as bright as it
was at new.no scratches or letters rubbed off,
copper need some cleaning. Have made up proper jumper cables
RG-174u,
not the cheap phono cabes. Also included is a Brand new Shure 450 Hi

Impedence desk mic. The R4A has the following extra crystals
12.5,13.0,29.1,36.6,37.6,38.1,39.1 in addition to the factory stock
10-80.
The T4XB has the following extra crystal 37.6 in addition to factory

stock 10-80. Full output on all bands since new tubes were put in the
transmitter. These units work really well together. All knobs are in

good shape feet also doubled up to give rise on front. These units are
ready to go on the air been using them nightly. work perfect. Been
out of work for a bit so need to sell some excess gear. asking 500.00 +
shipping.
OBO You won't be disapointed. will not separate sold as package deal

only.

Message-ID: <R_LZ7.6343$Vz3.761586@newsread2.prod.itd.earthlink.net>
Source record: 46065

Hi yall,

I have a fair looking, well working GSB100 Gonset transmitter for sale. The power supply has been rebuilt, and new tubes installed as needed. Tested on both 40 and 75 meters. Works well with good audio reports. Cabinet is very nice looking, and the front panel has some chipped paint, mostly where the screws mount to the cabinet. I can supply jpg's to interested folks.
Shipping will average about $30.00 anywhere coast to coast. Asking $225.00 plus shipping. Contact me at: wb6vse@ipa.net
I am located in Western Arkansas for shipping purposes.

Thanks for reading.
Mike-K5VSE

Having done this to several R388, R388A, 51J-X over the years, you will find that with age you can no longer do PTO adjustment without mechanical work. IF the end points at each end of the 1 MHz travel are nearly the same distance off you can, as suggested, change the dial with respect to the PTO shaft. Make sure that you check most bands and don't adjust so that any one band will end up being so far from centered that the moving "line" adjustable from the front panel won't provide you with a proper adjustment.

If you can't loosen a set screw make sure you are using a SPLINE/BRISTOL wrench and NOT A HEX/ALLEN WRENCH and that it's the right one. Get one with a long shaft. The Xcelite 99PS-60 set is a favorite or at least the proper wrench from that set. Heat it until quite hot with a soldering gun or large iron and apply it to the balky set screw(s). Turn it like heck. At worst you'll twist it a bit but it WILL come loose if you apply the heat as many times as necessary to soften the locking compound that is usually in those screws.

Now if you want to have REAL fun you'll remove the plug in the PTO and start in on those adjustments. Best left for those with the right tool or an understanding of the slot and how all interacts there. Not for the faint hearted.

> You can build a CIV interface for about $10.00

Yep. Two versions..A transister version, and a "deluxe" version using
the MAX232 chip. You could make a "psuedo" SM-20 mike from a rat shack
electret condensor element and save more big $$$. After looking at the
healthy prices they want for a simple cable for the faceplates, I'm
thinking of making one of those myself also if I can find some usable
end connectors. MK

Carl and fellow BA addicts....

To fix ?? Well some of us old timers actually look for chirpy sigs on the air which scream "OLD tube rig being used!" but if you want to make it a perfect T-9 then read on ....

Simple Fix - Reduce your RF output power. 10 watts or as low as it will go. (minimum ant loading).

Better fix - B+ is shared among 6CL6 osc and 6DQ6B Sweep tube amp. As you key the osc - the amp draws power - reducing the PS voltage. So what you need is some voltage regulation at the screen of the osc tube 6CL6.

Unhook the yellow wire from R2 15k 1W on the terminal board. Install a OA2 VR tube by soldering that yellow wire to pin 1 of the OA2. Now solder a new yellow wire from pin 7 of the OA2 and connect to R2 on the terminal board. R2 goes to screen grid of 6CL6 - pin 8.

You don't need to cut a hole in the chassis - just wrap some heat shrink or electricians tape and lay the OA2 inside the chassis. The OA2 is a cold gas tube and doesn't warm up. There is plenty of room behind the GZ34 socket. You can tywrap it to the nylon cable clamp.

Power up the 723 - You should see +240 or +250 VDC on pin OA2 pin 1 and +150 VDC on pin 7. The OA2 keeps the osc screen at 150 VDC key up or down. Hence the osc remains stable and no chirp!

The power output of the osc is now slightly reduced. You can bring things up a bit by replacing R2 15K with a 10k or 8k 1W resistor.

Everything you have just done - can be undone and rig restored back to "normal ebay mint condition".

For simple CW rigs like this - consider using an OA2 or OB2 VR tube on the osc section only to keep the osc nice and stable during keying for that perfect T-9 sig.

GUD LUCK ES 73 DE BIZ WDï¿½HCO

http://www.megacycles.biz

John,

Download pages 50-53 from the BAMA site:
ftp://bama.sbc.edu/downloads/heath/dx100/

or better still, download the entire manual from the site. If you are not
familiar with BAMA, see the home page:

http://bama.sbc.edu/

I had a DX-100B for awhile a few years back; it replaced the DX-100 I built back
in the mid 60s- I got a still unbuilt kit from one of my high school teachers
back then, so I had a "new" DX-100 in 1968!

Good luck with yours.

73,
Ron WA2EIO

Try contacting Heyboer Transformer at 17382 Hayes, Grand Haven MI. 49417
phone 616-842-5830. I have sent them several transformers from Hallicrafter
receivers that I have restored. If you send them the original transformer
your new replacement comes back looking like the OEM unit because they will
use the old shell, they are very reasonable, and I have been extremely
satisfied with the finished product.

AMATEUR RADIO NEWSLINE(tm) REPORT #1273 - January 4 2002
(Total Running Time with RAIN Promo: 24:48)

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio, FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1273 with a release date of Friday, January 4 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A “V-E team” finds a way to test kids in one of the most remote regions of the country and the FCC again says no to expanding PRB-. These stories are first on Amateur Radio Newsline report number 1273 coming your way right now.

HAM RADIO TESTING REACHES WHITE MOUNTAIN ALASKA

Ham radio examinations have finally come to one of the remotest areas of the nation. This, after a team of examiners from the W5YI VEC perform a fly-in examination session in White Mountain Alaska. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

White Mountain is a remote fishing village in the far North-West of Alaska. It’s major claim to fame is that its the next to the last checkpoint for the famed Iditarod dog sled race. And it wanted someone to come in and give ham

radio exams.

The closest big city is Nome. White Mountain is only about sixty miles from Nome but its over some rather treacherous terrain. There are no roads in or out and all supplies to White Mountain have to be delivered by plane or boat.

But White Mountain does ham a ham radio operator for its mayor. He is reindeer farmer Tom Gray KL0CQ. And one of its school board members is Eric Morris KL7HT. Both will tell you that a temperature of minus 40 degrees Fahrenheit and a wind-chill factor of minus 100 degrees is not uncommon in winter. These were the conditions faced by a four member W5YI VEC test team when it chartered a plane and flew in on December 11th to administer exams to four adults and fourteen youngsters who were determined to make ham radio a part of their life.

The trip which cost $800 for the flight alone was sponsored by the Seward Peninsula Amateur Radio Club. Braving the weather were examiners Ramon Gandia AL7X, Michael Nurse KL7UJ, Scott Webber AL7RJ and Thomas Busch NL7H. Al four are from Nome. Most of those to be tested came from the Bearing Strait School District’s only inland school. They had all been studying for their Amateur license as part of a search and rescue course. Neither the applicant or the VE team were disappointed. All eighteen passed the Technician class exam.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

Those involved in ham radio testing are keenly aware of the problems faced by remote areas of Alaska. At last July’s VEC Conference in Gettysburg Pennsylvania Jim Wiley KL7CC told the group that many applicants in Alaska are denied n Amateur Radio license exam due to the inaccessibility of their locations or the high cost of travel in that state. (W5YI)

**

HAM RADIO AND THE LAW: FCC SAYS NO ON PRB-1 EXPANSION REQUEST

Ham radio has lost yet another battle against deed restrictions, but the war is not over yet. At least that’s what the ARRL appears to be saying in a bulletin that describes the latest skirmish with the FCC over this politically volatile issue.

In the latest round, the FCC has affirmed a November 2000 staff-level decision that declined to include privately imposed deed covenants, conditions and restrictions under the limited federal preemption known as PRB-1. That’s the federal government policy requires municipalities to ''reasonably accommodate'' amateur communication in antenna-related zoning and regulation.

The ARRL last year appealed to have the full FCC review the earlier denial. The Commission turned down the League's Application for Review December 18 in a Memorandum Opinion and Order released December 26. As a result, it now looks as if the ARRL will bypass any further dealings on this issue with the FCC and will look for congressional relief instead.

The FCC itself even hinted that Congressional action by the ham community might be a next logical step. Its memorandum, opinion and order of dismissal did note that if Congress were to see fit to enact a statutory directive mandating the expansion of the FCC’s reasonable accommodation policy that the Commission would expeditiously act to fulfill its obligation there under. Translated: If Congress tells the FCC to include deed restrictions under the provisions of PRB-1, it will be more than happy to do so. (ARRL)

**

HAM RADIO IN SPACE: PROJECT JJ - HE EAGLE HAS LANDED

AMSAT-NA's newest satellite project, known as Project JJ for the past year, now has a new and official name. This, as AMSAT North America President Robin Haighton, VE3FRH, announces that effective January 1, 2002, the satellite will officially be known as 'Eagle'.

The name Eagle was submitted by Bill Allen, W7US, of Tucson, Arizona. It was selected from a list of forty-five names submitted by twenty-nine satellite operators.

For his winning suggestion, W7US will receive a free dinner at the annual AMSAT dinner held during the Dayton Hamvention. We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report. (AMSAT-NA, ANS)

**

BREAK 1

Welcoming in the new year with ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the N7VGS repeater serving the Salt River Star Valley Wyoming and congratulating 13 year old Devin Cassity, on becoming the youngest ham in South West Wyoming. Devin is now KD7PHN.

(5 Sec Pause Here)

**

EMERGENCY PREPAREDNESS: NORTHERN CAL TOWN CHOOSES HAM RADIO

Ham radio started the year with some very positive public exposure in the Los Angeles Times. The January 1st edition featured an in depth article about a Northern California town that will tap into older technology to prepare for future emergencies.

Worried that a disaster will knock out e-mail and cell phones, Los Altos Hills has decided to turn to its local ham radio community and make it the primary back-up to normal disaster preparedness communications. And as you might expect, the hams are more than ready to oblige

The complete story can be read at the Los Angeles Times website. The complex URL is http://www.latimes.com/news/local/la-000000203jan01.story. (Highlighted by ARNewsline™)

**

AMERICA AT WAR: POPCOMM COLUMNISTS SAYS “DONT TURN THE OTHER CHEEK”

Popular Communications writer Eric Force has some strong words that are obviously aimed at the pacifists who oppose the United States military retaliation against Osuma bin Laden and his al-Quida terrorist network. As a response to those he calls the “do-gooders of the world” who promote turning the other cheek, Force says to look, really look at the attack that brought down New York City’s World Trade Center twin towers. He then says that it could have struck a lot closer to them.

Force says and we quote: “Consider that it could have been you, your mom, dad, brother, sister other relative or a close friend in those planes and buildings who were terrorized, murdered and buried in the rubble.” He adds that just thinking about the incomprehensible terror, suffering and losses incurred by innocent human beings a the cowardly hands of international thugs continues to tear at his heart.

Force has dedicated his latest I-Waves column to the sights and sounds of September 11th that are available on the Internet and to the victims of the tragedy. Its a very compelling article. You can find it starting on page 66 of the January edition of Popular Communications Magazine that’s on newsstands right now. (PopComm)

**

AMERICA AT WAR: FEDS TO AID NYC TV STATION REBUILD

New York television stations will be getting federal help rebuilding transmitters that were destroyed in the September 11th terrorist attack on the World Trade Center. A total of ten New York area stations will receive eight point two million to offset the thirty million to forty million dollar price tag for purchasing and
constructing a new transmission facility.

According to the Broadcasting and Cable newsletter, Senator Charles Schumer managed to secure the funding as addition to emergency aid appropriation for victims of the attacks. As previously reported, there is some speculation that the replacement transmitting facility could be a 1500 to 2000 foot high stand-alone tower constructed near the former site of the Twin Towers. (Broadcasting & Cable)

**

ENFORCEMENT: NAL CANCELED

The FCC has canceled a proposed ten thousand dollar fine that it had issued to Jeffrey Alan Pettrey, This, for his apparent violation of Section 301 of the Communications Act involving operation of an unlicensed radio transmitter.

Back on July 30, 2001, the District Director of the Commission's Columbia, Maryland Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Pettrey for the infraction. Pettrey filed a response to the N-A-L on August 7, 2001 accompanied by documentation regarding his

inability to pay the proposed fine. After reviewing Pettrey's response, the FCC conclude that cancellation of the proposed $10,000 forfeiture is warranted based on Pettrey’s inability to pay. (FCC)

**

ENFORCEMENT: FCC CANCELS CONVICTED HAMS LICENSE

The FCC has canceled the Amateur license of Kenneth P. Kelly, WT2FBI, of Greensboro North Carolina after Kelly failed to show up for a re-examination. But at the time of the FCC retest order Kelly was otherwise occupied. He was fighting criminal charges in relation to a jamming case in Ohio. We have this report:

--
On November 30, 2001, Kenneth Kelly, the ex-WT2FBI was sentenced to 5 years probation by the Judge H. J. Bressler in a Butler County Ohio court. He had previously been indicted on a 4 th degree felony charge of disrupting public service by his jamming and talking on the Middletown Ohio police radio system.

At his hearing, Kelly agreed to a plea bargain. He admitted his guilt to a reduced charge attempted disrupting public services. At the time the FCC pulled his ham radio ticket Kelly was being held in the Butler County Ohio Jail pending sentencing.

By way of background, a person later proven to be Kelly was first noticed on the Middletown police radio channel the third week of July 2001. Initially the police dispatch radio system was not recording him but that was soon remedied by city radio technicians. After several days of taping, it was observed that the voice on the police radio was similar to one heard on the local 2 meter Amateur frequencies.

Several members of the Dial Radio Club then assisted police by monitoring and taping Kelly on the 2 meter band. Tapes from 2 meters and from the police were then voice printed the aid of computers to check similarities. Dial club members also tried to direction find and locate the signal both on 2 meters and on the police channel.

Through some luck, detectives working with a metro housing police officer and discovered that Kelly was now living in their jurisdiction. After they interviewed him, they felt that he was the person interfering. As the investigation progressed, he admitted to detectives that he may have accidentally transmitted on their frequency by accident. He claimed that his signal may have been mixing with an FM broadcast station and another ham repeater.

But Police did not believe it was accidental, because he was taped trying to talk directly to the police dispatcher and the cars. Later Kelly did admit his guilt and entered into the plea bargain. Now sentence has been passed by both the local court and the FCC.

For the Amateur Radio Newsline, I’m Burt Hicks, WB6MQV, reporting.

--

When he was finally caught Kelly had a Yaesu VX-5 hand held in his possession that had been modified to transmit out of band. The assistance of the Dial Radio Club members is credited with helping to solve this case.

Note: Information and documents from the case can be obtained from the Butler County Ohio Clerk's office or online at: http://www.butlercountyclerk.org/ Click on Butler County Court Records Search. Then enter Kenneth Kelly. (FCC, Dial ARC, others)

**

ENFORCEMENT: MITNICK TO FIGHT TO KEEP HIS HAM LICENSE

Another ham who appears to be getting ready to do battle with the FCC is former computer hacker turned talk show host Kevin David Mitnick, N6NHG. Amateur Radio Newsline’s Bill Pasternak, WA6ITF has the latest:

--

As reported last week, the FCC is challenging Kevin David Mitnick's request to renew his ham radio license. The agency claims that his criminal background raises a substantial and material question of fact as to whether Mitnick possesses the requisite character qualifications to be and remain a commission licensee.

Now, N6NHG has told the U-K Newspaper the Register: "It's just another example of them trying to harass me. Now I've got to spend money to keep a ham license."

Mitnick insists that he has totally abandoned his former ways. The Register article notes that that he was recently called to testify before Congress on federal computer security matters. Also that he spent two days briefing the U-S Commission on National Security on these issues. Mitnick tells the Register that he cannot understand why the government is now questioning his character.

Mitnick is currently the host of the radio program called The Dark Side of the Internet. It airs in the Los Angeles area from 5 to 7 a.m. Sunday mornings over radio station KFI 640 AM. And in a recent appearance on Coast to Coast A-M hosted by Art Bell, W6OBB, Mitnick said that he is hoping for a career in computer security once his term of supervised release from prison has been completed.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

The complete Register story and interview with Mitnick is on the web at a rather long and complex U-R-L. You will find it at http://www.theregister.co.uk/content/55/23494.html (Adapted from the Register)

**

INTERNET SECURITY: CIA GOES OUT OF ENCRYPTION COMPANY FUNDING

And speaking of Internet security, word that a Central Intelligence Agency funded company that allowed Web surfers to browse anonymously has closed. According to news reports, Emeryville California based SafeWeb enabled Internet users to gain access to the World Wide Web and browse sites through its encrypted service. This made their on-line habits and history untraceable. In the 2000 - 2001 fiscal year, SafeWeb received one million dollars in funding from the U-S Central Intelligence Agency's venture capital arm. (published reports)

(5 sec pause here)

**

HAM RADIO BUSINESS: AMATEUR RADIO TRADER CEASES PUBLICATION

Ham radio Internet auction sites may be responsible for a twice a month ham radio equipment sales magazine going away. This, after Amateur Radio Trader magazine announces that it has ceased publication.

According to Editor Barbara Patterson, KF4MMV, the Amateur Radio Trader was no longer a viable product. She says that the firm will be redirecting its resources into other areas.

Meantime, the company has also pulled its amateuradiotrader.com website off line. But unlike other publications which have gone under, in this case subscribers are being reimbursed for any outstanding issues. In addition to handling buy and sell ads, Amateur Radio Trader also donated page space to advertising the annual Newsline Young Ham of the Year award. (ARNewsline™)

**

HAM RADIO HERITAGE: MAKING WCC A PART OF THE FUTURE

A ham is campaigning to preserve part of radios past and have it become a part of the future. This as Lewis Masson, K1LJ-S, says that the town of Chatham Massachusetts should convert the site of radio station WCC into an Amateur Radio station along with a training curriculum to teach the kids in the area about communications technology.

WCC is one of the original Marconi Marine Radio Stations. Masson is an ex-marine telex operator at WCC. The site was recently turned over to the town of Chatham and Masson believes it is important to preserve the operations building as an operating amateur radio station and keep the hotel building as a museum to preserve and display memorabilia.

Masson says over the Internet that he has formed a committee to work on this project and that they are looking for nationwide support for this campaign. If preserving the past as an investment in the future is of interest to you, please contact K1LJS by e-mail to lemasson@juno.com. (Internet)

**

SPECIAL EVENTS: HAM RADIO UNIVERSITY 2002

A reminder the third annual Ham Radio University event takes place on January 20, 2002. Location is the Babylon Long Island New York Town Hall Annex with the doors opening at 9 a-m Eastern time.

Ham Radio University is a day of education about Amateur Radio. This there will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced Amateur Radio operator. The focus will be "hands on" with many demonstrations. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

For more information about Ham Radio University, please contact its Chairman Phil Lewis N2MUN by e-mail to n2mun@optonline.net. You can also get in touch with ARRL New York and Long Island Section Manager, George Tranos N2GA by e-mail to n2ga@arrl.org. Also check the Ham Radio University website for a full list of forums, directions and talk-in information. Its in cyberspace at www.arrlhudson.org/nli/hru2002.htm (N2DO)

**

HAM RADIO RECORDS: BEST OF THE WEST AND VHF CONTEST HONOR ROLLS

Tim Marek, K7XC, says that he has updated W6 / W7 & "Best In The West" VHF Contest Honor Rolls. They are now available at the following web sites.

http://k7xc.tripod.com/VHF_Records/index.html s the stand alone records page. http://k7xc.tripod.com/K7XCweaksignal/ is where individual links can be found to each contest. (VHF Reflector)

**

HAM RADIO SCIENCE: NEW 6 METER PROPAGATION BEACON IN WASHINGTON STATE

Rich Ewing, KO7N reports over the VHF Reflector that Bruce Shurtz, W7BAS, has installed a propagation beacon in gridsquare CN87TG near Kennmore Washington. It operates on 50.069 MHz putting out 10 watts to a 5 element yagi pointing 90 degrees. The beacon is operational 24 hours a day, seven days a week. QSN reports go to W7BAS, at his callbook address. (VHF Reflector)

**

HAM RADIO IN SPACE: VERY FEW LAUNCHES

Peter Guezlow, DB2OS, reported that 2001 has turned out to be the slowest year for space launches in nearly 40 years. Ham radio or otherwise. According to DB2OS, only 58 flights reached orbit, and there was one complete failure.

Guezlow says that historians note that we must look back to 1963 to find a year that produced fewer launches. He says that in 2000 there were 82 launches to orbit plus three failures. By contrast the most productive year was 1984 when 129 launches delivered payloads into orbit.

But there is at least one bright note. Russia successfully placed five satellites into orbit recently after launching them aboard a Zenit rocket. The cargo rocket, carrying three Russian, one Moroccan and one Pakistani satellite, took off from the Baikonur space center in Kazakhstan. (AMSAT, ANS)

**

HAM RADIO IN SPACE: NEW INDIA WEBSITE

The AMSAT-India website has been officially launched recently by the government of India and the Department of Space. VU2POP says that you can check it out by taking your browser over to www.amsatindia.org. (ANS)

**

CONTESTS: HUNTING LIONS ON THE AIR

The 31st annual Hunting Lions in the Air contest will take place on the weekend January 12th to the 13th. The contest period will be 48 hours and will run from midnight UTC Friday night to midnight UTC Sunday night, and all hams are welcome to participate.

According to its sponsors, the objective of this operating event is to create and foster a spirit of international understanding and cooperation among radio amateurs and members of the Lions Clubs through the use of world-wide radio communication. The contest also commemorates the birthday of Melvin Jones, the founder of the Association of Lions Clubs who was born at Ft. Thomas, Arizona on January 13, 1879. (Q-News)

**

DX

In DX, word that the recently postponed Ducie Island Dxpedition is on again for March. Ducie Island became a DXCC entity last November and it immediately jumped to the top of the most wanted contact list. But rough seas scuttle the first attempt to put it on the air. (RSGB)

Meantime 6 meters continues to be the V-H-F D-X band of choice. On Monday December 31st, Kevin Bishop WB8XX, says that he started hearing O-H-1-X-T at 1300 U-T-C on a backscatter path. From then on until 1620 U-T-C he worked 8 new countries and over thirty new grids in Europe and Asia. (VHF Reflector)

**

STRANGE TECHNOLOGY: ARE CELLPHONES KILLING GHOSTS?

Now, from radio communications to the effect of radio communications on supernatural communications. This, as a British expert who has spent years researching the occult says that cellular and other mobile phones are killing off ghosts. Don Wilbanks KC5MFA has the details:

--

No, we are not kidding you. In fact, Tony Cornell, of the Society for Psychical Research, has told the London Sunday Express that reports of ghost

sightings started to decline when mobile phones were introduced 15 years ago.

According to Cornell, ghost sightings had remained consistent for centuries. In fact, until three years ago the society received one or two new ghost sighting reports every week. But with the introduction of mobile phones 15 years ago, ghost sightings began to decline to the point where they are not receiving any.

And why are there no longer any ghosts being observed? Apparently paranormal events, which many scientists attribute to unusual electrical activity, my be drowned out by the electronic noise produced by cellular telephones and text messaging pager transmitters. And according to the newspaper, the lack of ghost sightings could adversely impact on the nations economy. It says that haunted tourist attractions in Britain could be under threat if the number of cellphones continues to grow from the present figure of about 39 million now in use in the U-K.

Don Wilbanks, KC5MFA.

--

And all of this begs that one question be asked. If ghosts are the spirits of the dead, how can anything actually kill them? (Science Today)

Source record: 45946

Dave,
As to what was gained by slightly varying the 2nd If freq is a mystery to me. I just always thought that either it made the rcvr less susceptible to an image or some new manufacturing technique required it to save a few bucks. Could it have made the T notch filter have a wider range? As you can see when looking at the S 40 series, cost savings for the factory seems to be the big improvement, but maybe I missed something. 73 Mike KF6KXG

## 220. Plessey 2200G Manual

Dave

Why buy a 30 to 50 year old problem.
The Triplett 2413 that I'm work on now
has every resistor and cap bad in it.

The B&K 747 is a great tester. Make a adapter for it.
Using Octal socket 24, a male octal plug, a small box
4,5,& 6 pin sockets. Wire octal plug to same pin on
each socket, that pin 1 to pin 1 etc, use pin 7 on octal plug
for grid cap and pin 8 for plate cap. Find a 1950's data
book RC-15 to RC-17 or use the web. Most 4,5,and 6
pin tube have a octal electrically identical tube. Like a
78 is a 6K7 octal set the B&K 747 sensitivity control
for a 6K7. Set switiches 1 to 8 for tube part being connect
to. Switches 9 thur 12 and pins that have N/C to the dot.
Set switches 13 and 14 to the electrically identical tube
from B&K data sheet. Read pages 20 to 23 in the Instruction
manual. The B&K 745 Instruction manual is on the Bama site.
This will test most tube and after the first tube is easy, better
than keeping up a older tube tester.

Source record: 45952

I just acquired one in working condition. Upon examination it seems that the 500uf ceramic (electrolytic?) or the 1uf? (electrolytic?) or both are leaking. They are placed adjacent to each other near the hole in the chassis for the speaker. I don't have a schematic, yet. Can anyone verify the parts specifications so I can replace them?

Gordon.

Hi all. I'm looking for a functional M57726 RF Amplifier module,
doesn't have to be new. Yes, I know I can get them for $60 plus
shipping from RF Parts, but I'd like to find one a lot less expensive.
(It doesn't make sense to put a $60 module in a radio only worth about
$90 on a good day.)

So, what have you? Maybe you've got a junker with a known good
module?

I look forward to your email or call; cosmetics DON'T matter to me on
this one.

Thanks;

Neil, K1VY

>
> Run the HT-44 into the dummy load....then use the tuner for minimum swr.

I guess you can "pretune" the HT-44 on the dummy load, but you might
need to touch it up once you get an antenna tuned. I always tune the
tuner to get an acceptable match with the least number of coil
turns/inductance and max capacitance. This way seems to give me the
lowest tuner losses. The way I look at it is you can get a match with
39 or more different control settings on the average T net tuner, but
only one is correct to have the lowest loss. The one with the least
inductance used. I've seen easy 15-20% losses from using too much
inductance on my 989c. Hardly a readable difference on the meter with
a retune using the least coil turns.
>
> Next step is bringing the HT-45 amp in line. Same procedure ?

If you have already tuned the tuner with low power, you are done. You
don't need to change anything to run high power. Just have a tuner big
enough to handle it. The tuner should be the first thing in line from
the feedline. So any changes of gear will not effect the tuner
settings. MK

My Heath Mohawk receiver needs a mate...

Looking for a Heath Apache or Marauder transmitter. Must be complete and in decent shape, with NO extra holes drilled in the front panel and NO undocumented modifications. Prefer a working rig but not afraid to tackle a reasonable fixer-upper. Since those monsters are so big and heavy, I'd prefer to find one somewhere in or near the Dallas / Fort Worth are and just pick it up in person to save big bucks on shipping (and prevent shipping damage!).

Also looking for some restoration parts for the Mohawk, such as a front panel with nice markings and no extra holes, a VFO dial drum that isn't shattered, one small satin-chrome knob (missing one off of the "Calibrate" control), and the bellcrank linkage used on the "Selectivity" switch.

73,
Dean, K5DH

A very dumb question to anyone who has done it, I imagine, but although
I have done many, many things like it, never this. When Making an rf
mixer and oscillator alignment does one tune the generator to the dial
setting? My SX-11- manual tells everything but that so I guess a dumb question.

Thanks,
John

Ideally you will tune the sig gen dial reading to the same as the
desired radio dial reading and make the osc adjustments accordingly.
Depending on your desire for accuracy, the IF should first be aligned to
the correct IF freq....maybe not an issue on an SX-11 :-)
One of my favorite stunts is to listen to a separate digital radio to
align the local oscillator to. I find that easier and more accurate
than the sig gen.

Thank you Bill,

The digital radio idea is a good one.

I miss typed, it is the SX110 and they do suggest, and I will do,
setting the IF first.

I expect to check the generators with a scope, not perfect but hopefully
close enough.

John

Those digital radios are excellent pieces of test equipment. Especially if you have them modified for continuos coverage tx and rx.
They are good accurate frequency meters, signal generators, rf millivoltmeters, spectrum analyzers, signal tracers, level meters and probably a few more that I missed.

You can use a digital radio to align any transmitter or receiver. Don't forget the crystal calibrator in the old receivers too. They are very good for most of the receiver alignment.

## 250. Wanted : schematic, RCA GR-10

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-07 23:46:14 UTC
From: John Bartley <jcb@igs.net>
Message-ID: <3c3a304f_1@corp.newsgroups.com>
Source record: 45979

Hello all
A friend of mine, an elderly gentleman, has asked me to make his RCA GR-10 receiver work again. I would like to have a schematic before I begin, and I wonder if someone has a manual for one of these that they would be willing to either scan and email, or photocopy and snail-mail. I would be very happy to pay for your trouble. I have a high speed connection so a large size scan would be great! (my eyes are a getting old)
Failing all this, would anyone be able to comment on the quality of the manual copies from a company in the UK known as "Mauritron Technical Services". They have them available for download, but have no examples or illustrations on their home page. (that I can find)
Thank you

That would be a real fun receiver to fire off on batteries... A few D cells for the filaments, a buncha 9-volt transistor batteries in series for the B+!

Never saw that model before. Thanks.

Pete

Selling my venerable Eico keyer. The front panel is about an 8.5. The chassis is dusty but in good condition. The cabinet is about an 8 with one foot missing. The grommet where the AC line enters is not the original but looks and works ok. The keyer works fine and was in use by me for a number of years. I have a schematic but no manual. What CW I operate these days is via a Vibroplex bug.

If anyone is interested I have jpegs if requested.

I would like to get $55 plus about $10 for UPS CONUS shipping.

Tnx

Lionel

## 258. Re: Eico 723 Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-08 03:41:41 UTC
From: Dave Edwards <kd2e@home.com>
Message-ID: <VTt_7.326438$ez.46708331@news1.rdc1.nj.home.com>
Source record: 45986

Carl... I had a Eico 720 that chirped... It also was a bum tube.
I have a mint 723, that was built and never used. It hummed when I got it, and I replaced the power supply filter cap. Easy to do 'cuz it is an below deck mounted cap.
Before you dig in to the rig to repair the chirp, have you tried another crystal?
Perhaps 3 or 4?
Or, are you using a VFO? If so, try a crystal....or 2
I made a contact with mine last week and it had some chirp. I then went to my 'boatanchor frequency' crystal at 14.060, and the chirp was gone.
However, the 'chirpy' crystal works fine with my Drake 2NT.
The old Allied T60 had the same anomoly as the 723. It is simply a VERY simple circuit.
I agree with the other fellow. I often look for a bit of chirp when tuning for boatanchors. I often will be treated to an interesting story!!!!
Regards....Dave

## 263. Newbe - Tube Availability

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-08 11:09:39 UTC
From: Scott <GAEL79@Peoplepc.com>
Message-ID: <u3lktrmhrm03db@corp.supernews.com>
Source record: 45991

Hello All,

Please forgive my ignorance, but this is all new to me. I just got my tech license, and want to keep progressing. I am well versed in electronics,( I work on aircraft radios for a living), but all solid state. I can remember going to the local drug store with my father in the early 1970's and using the tube tester there, to check tubes. Also I can remember the day when the local Radio Shack store had a full wall behind the counter, dedicated to storing tubes.

I think the "finding the old basket case radio and troubleshooting it and then using it unit it breaks again" part of this hobby is where I am going to find my nitche.

Before I start "impressing" my wife, with wheel barrels filled with old tube style radios and stacks of yellowed schematics, I though I better ask the question...

...Are there still reliable sources out there for tubes, and If so, where should I look? Are tubes still being produced new, maybe overseas, or are they all used, 30 plus year old leftovers that have been handed from one junk dealers warehouse to another?

If tubes are available today, how are the cost of these tubes? Does the cost prohibit someone from doing what I am talking about?

If I am going to keep 6-8 radios around, that are all full of tubes, would it be wise for me to invest in a used tube tester, or is there a way to "pin out" or test a tubes with a volt/ohm meter against a book that has maybe a picture of the footprint of the tube and the relationship of each pin?

Sorry for the long post, I just wanted to get the "experts" opinion, prior to starting

Thank you in advance, for the reply,

Scott

## 264. Re: Newbe - Tube Availability

Source record: 45992

Hello Scott,

Welcome to ham radio.

Depending on your location, I recommend you find and join a vintage radio collecting club - this is different than a ham club. Ham clubs are mostly social and activity orientated.

Collecting clubs are oritneted to fixing up nice old radios. If you email me directly and tell me your city & state, I'll try to find a good local club for you.

Also, you need to "network". Friends in your group will be invaluable in findiing parts and radios to fix. Also try some senior relitaves and friends of the family. Many people have a small stash of tubes and an occasional radio stuck away.

## 265. Re: Newbe - Tube Availability

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-08 13:13:19 UTC
From: mailfrmpa@aol.com
Message-ID: <20020108081319.24292.00000415@mb-mc.aol.com>
Source record: 45993

Tubes are available from a number of sources. Many are "NOS" (New Old Stock), quite a few are Mil. Surplus and carry a JAN (Joint Army Navy) number that can be cross-referenced to civilian numbers. Except for some transmitting types or paticularly rare numbers, the majority of common receiving types are very reasonably priced. My favorite source is Antique Radio Supply in Arizona. They are on the web, as are others. Try a Google search on "tubes" or such.

Have fun!

K0MB

>...wheel barrels filled with old tube style radios and stacks of yellowed schematics

You're our boy! Welcome to the wrecking crew. Tubes are no problem.
There are warehouses full out there; the supply won't dry up for a
generation or two.

You can buy most of the ones you need from Antique Electronic Supply
(http://www.tubesandmore.com). They're a bit pricey, but they've got
'em. Another approach is to got to hamfests and buy big boxes of tubes
by the pound, and a tube tester. Set up the tester near your TV, catch
the next Big Game, and test tubes during half-time and the beer
commercials. Toss the bad ones, sort the good ones and you're on the
air. Lots and lots of tubes are also available from guys here on usenet,
and also on ebay.

Best of luck. 73...

Mike, N4PDY

There's quite a few online sources for tubes. There's a few varieties
that have gotten scarce or the price has been driven up by audiophiles,
but for the most part you can find most anything you need for old radios
for a few bux each.
Here's one example...
http://www.vacuumtubesinc.com

You can get an old cheapo tube tester adequate for go - no go testing
for as little as $20 or so. Its indeed a handy thing to have when you
buy a big box of unknown tubes at a hamfest :-)

Feel free to drop by
rec.antiques.radio+phono
and

## 268. UV-199 Regen

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-08 14:31:12 UTC
From: Ralph Cameron <ralphc@igs.net>
Message-ID: <3c3aff08$1_4@corp.newsgroups.com>
Source record: 45896

I am looking for the schematic of a single tube UV-199 regen showing how the varicoupler connections are made.

The unit I have has a fixed antenna winding, a plate winding and a tickler winding . Because some connections were missing, I think the grid coil was tuned and the plate coil was untuned but how is the tickler connected in this arrnagement?

Anyone help? Thanks very much

What do people think about the Svetlana tubes? Are they well-built? Do they meet specs? How about lifetime? Any comments on other aspects of them? If you needed some new or NOS, scarce tubes, would you look there first, last, or in the middle?

Message-ID: <bfc05d2.0201080940.2a3deb31@posting.google.com>
Source record: 45903

I am looking to create a line of Tee shirts with various different discontinued ham radio manufacturer logos on them (i.e. one shirt is Hammerlund logo, another is Halicrafters, HeathKit, National, etc...). I am looking for contact information for the current owner of the logo rights so I can do this on an up and up basis. So far I have emailed various sources with little response.

If you have any information that could lead to contact with these entities it would be greatly appreciated. Also any radio brands you would like to see on a shirt please let me know as I can look into those also.

Any information that leads to a successful contact (i.e. offical yes to shirt) will be rewarded with a copy of that shirt once they go into production.

Also quality pictures (big and hi-res, the bigger the better) of old logos would be greatly appreciated. Scans from manuals or from the radio would work great.

Please help me rememebr these old soldiers by keeping the names fresh in our memories.

Thanks

Please identify direct emails to edgrimly@hotmail.com and subject= radio tee shirt

Attached to an old Vibroplex bug when I got it, was a plug with 2 long flat opposing brass spring contacts separated by a thin insulator, in a phoneplug-type cover with a black cloth cord. Total length of contacts is abt that of a phoneplug. In what application was such a key connnector used? TIA.

Oooooohhhhhh! Don't trash it! Try a Google search on "cord and wedge"
(with the quotes) and see what you find.

The input is tuned, with a grid leak between the grid and hot end of the
coil.
Grid leak values are typically 3 meg in parallel with 250 mmf.

The untuned link goes in series with the plate and B+. Are you using a
shunt
resistance across the tickler, or variable cap to gnd. to control regen.
action?
You will need to get the phase correct on the tickler in order to boost the
signal
and support oscillation.

"Telegraph Wedge".....Never thought of putting it in under the shorting bar terminal - lots of keys didn't have 'em but we'd slip it inside the regular keying contacts (maybe screw it down a lil if needed - little politics sometimes if there were 2 of ya covering a 24 hour shift heheh.

Just a side note for anyone out there who'd wonder why "anyone" would use a bug after the advent of they keyer - reasoning (at least at sea), was that there was such a wide variety of keying voltages and logics (and some of these combinations had real healthy spikes). The usefulness of the "telegraph wedge" asked about, became apparent when you sat down in front of a myriad of connectors (or merely a wire disappearing into the console).

# 288. VE2SWL, Jordan Arndt, THIEF semi-retraction

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-08 23:20:22 UTC
From: Webster Williams <kr4wm@DonchaWishuKnew.com>
Message-ID: <MPG.16a5488aac7e8b11989823@news-server.sc.rr.com>
Source record: 45916
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.swap

TO WHOM IT MAY CONCERN:

I posted messages in several newsgroups last month in reference to a Jordan Arndt, VE2SWL, of Calgary, AB, Canada, concerning his failure to ship items which I had paid for. In spite of my filing mail and wire fraud charges against Mr. Arndt, I told him that I would place an information bulletin in the newsgroups retracting the statements I made if I ever received my merchandise.

Mr. Arndt has been kind enough to allow me to pay for shipping a second time via Federal Express, and he allowed FedEx to come by his home at my expense to retrieve my merchandise and bring it to me. It arrived about a week ago, and was exactly what I had purchased.

I had originally paid for the items around October 15th, and it just took my paying shipping a second time, many threatening letters, and two and a half months for my goods to arrive. But Mr. Arndt DID finally come through on my items, so I can't fault him on the items. The items I ordered WERE in the box, and they WERE in good condition.

So, instead of stealing my money for goods, it appears that he actually only stole my money for shipping. I apologize to Mr. Arndt for accusing him of stealing something he didn't steal.

Mr. Arndt was nice enough to explain that he had been undergoing financial difficulties and that he needed to redirect all the money I sent him for goods and shipping to pay his rent, buy food, etc. and as a result, no longer had the funds I sent him to pay for shipment of my items.

Mr. Arndt, if you are reading this, I apologize for accusing you of stealing -ALL- of my money. I now know you only intended to steal -PART- of it. Please excuse me for placing false information prior bulletin concerning your theft. I take back every last word.

Thank you all for taking the time to read this,

Webster D. Williams, KR4WM in Myrtle Beach, SC

I found my Grandfathers old aircraft ground crew headphones(in good shape)
the markings on them are as follows: receiver
ANB-H-I
made in USA
by
UTAL CHICAGO
does anyone own any thing abuot them?
when where they made?
who was Utah Chicago?
I pluged them into my Hammarlund SP-600, and they work great I just want to
know there history.
Thanks.
John D.

Hehe!

I bet he'll find something to "plug" up that hole with! LOL! Reminds me of a friend who is a ham and spend most of his life in the radio repair business. His shop is a veritable museum of ham rigs, old Motorolas, CB sets, and big AM transmitters. Several summers ago, he asked me to help him clean out some of the stuff because he couldn't get into the garage door of the shop. So I spent several weekends helping James clean out and haul off old worthless stuff. The shop's floor hadn't seen daylight in years! After clearing out a fair amount of space, we swept and sweated, and finally it was done. The next week, there was another big AM trans-mitter there awaiting repair. Once that transmitter found a place there in front of the door, things rapidly went downhill! Soon there was another.....and another.....and another.....until it was filled right back up! We again cleaned it out (or rearranged it?). Once again it filled up with radio "toys". The third time, he filled it up yet again. So far, I have refused to help him move that heavy stuff again--unless he promises not to fill up that hole again! LOL!

I'd really like to sell this here vs. eBay so:

Surplus to my needs, a beautiful example of the Original chrome Bug. Serial number 246K, red bug on number plate.

Plexiglass presentation case. New finger pieces and "jewel". This bug is in beautiful shape and would make an excellent addition to your collection or your shack.

Still almost $300 from Vibroplex new.

$150 including shipping CONUS

Larry, N0XB
Northfield, MN

Dave,

I'm so glad you posted this reply. I also have noticed that the chirp sems to be more pronounced with some xtals. I have about a half dozen laying around and I'll give them all a try. Also, it seems that when I am using a xtal on a harmonic the chirp gets worse. Perhaps this is a sign that the osc tube or circuit is weak.

TNX again.

You are multiplying the magnitude of the frequency shift
when you operate the rig on a harmonic of the xtal's
frequency... If a 7 MHz rock is being used on 21 MHz,
and shifts 40 Hz on the fundamental, the 21 MHz output
will be shifting 120 Hz.

I can't imagine why they moved the IF around by such small increments,
either, Mike. A mystery for the ages, I guess.

Yo Web...

I'm after Dave Munroe (or whatever he calls himself these days).... In Keene, Ontario, Canada.
Pay double ??? For what you agreed to??? Is Canada the breeding ground for the new internet rip-off artists?? Perhaps, but I wont stand for it. The individual I dealt with, dishman@northshells.net, swl@northshells.net, speedy@northshells.net have one thing in common.... northshells.net... and they have been put on notice. I've taken my case to the FBI and US Postal Service and have hired an investigator in Ontario to nail this guy. I've had many honorable dealings on the net but as of late our dear, loving, neighbors, up north, are more than willing to rip us off. Re-directing of monies ????? Good Lord !!! Is this the new welfare ???? Internet fraud to pay the bills ??? Lock and Load !!!! Let's shut these suckers down !!!!!!! Call the FBI...They are on the net.... Contact the Postal Service !!!! Argh !! Yer breakin my friggin nuts here.... Pay double... It would be cheaper if a bunch of us "Canuc trustin but got ripped off types" would take a bus up north with some Louisvilles and do some serious research . (If you know what I mean.) These "A" holes believe the US-Canada boarder affords them some protection.
Yo !!! Canada !!! I'm declarin' war !!! Thieving rodents !!! Yer goin down !!!!
NUKE CANADA !!! The new welfare state !!!!

Hey "Finalquest" <finalquest@earthlink.net> your real name wouldn't be Osama bin drinkin' would it?

Nuke Canada? Are you really THAT STUPID? Are you going to kill millions of nice innocent people just because your stupid and lost some money to ONE thief?

Why don't you just drive up to Canada and pay Mr. Munroe a visit in person, that in it self will suprise the hell out of him. And while your there in Ontario drop by the RCMP post and talk it over with them? I'm sure they would like to know about him. But don't mention you posted that trash about nuking Canada, or they might just take a cold hard look at YOUR ACTIVITIES!

I'm damn glad you don't have control over ANY of our national defense structure!! BTW if your a ham please turn in your license, you don't deserve to be one!

I was able to do a little persuading on the crystal I have
using some emory cloth. And I have acquired some final amp tubes
(6jb6). So the only other pieces I need are knobs and cosmetic
stuff. Besides the cosmetics, it appears to be working correctly!

Thanks for your time.

Chris

## 334. FS: Collins 51J/R388 series cabinet

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-10 02:46:39 UTC
From: maritimus49@aol.com
Message-ID: <20020109214639.12190.00000709@mb-fs.aol.com>
Source record: 45861

I have for sale the matching cabinet used with the Collins 51J/R388 series of receivers. It is in excellent condition and has not been repainted. This is the cabinet with the lift-up lid and the ventilation slots on the sides. It is considered to be rare. There is another for sale on ebay if you want to see what they look like. I just purchased a 9+ Collins R-388 and this is the cabinet that comes with it. I don't need the cabinet so I am offering it for $200 plus shipping. I believe that this is a fair price as the reproduction cabinet available from a Collins restorer sells for $350. The cabinet I am offering looks like new and has been in storage.

# 336. WTB: CU-872A/U Antenna Coupler Manual

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-10 05:53:52 UTC
From: ckepus@mindspring.com
Message-ID: <44cbbf21.0201092153.11ae7d5d@posting.google.com>
Source record: 45864
Cross-posted to: alt.military.collecting,rec.radio.swap,rec.radio.amateur.boatanchors,rec.aviation.military

I acquired a CU-872A/U Antenna Coupler which allows one to feed up to nine receivers from a single antenna. I have run into more blind alleys than ever trying to locate a manual for this unit. Does anyone have a manual of this unit or know where I might acquire same? Here is the info on the ID plate:
CU-872A/U Antenna Coupler
Navy Department
Bureau of Ships
Contractor and Manufacturer
Munston Electronic Manufacturing Corporation, Islip, NY
Contract NObsr-91096

I believe the nomenclature for the manual is: Depot Maintenance Manual TM 11-5820-613-15

Thanks,
Chris W7JPG

## 344. FS: Johnson Ranger I or parts ...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-10 12:50:36 UTC
From: Larry W9MDX <net1@w9mdx.com>
Message-ID: <12g%7.154549$lV4.26514840@e420r-atl1.usenetserver.com>
Source record: 45872

I have received quite a few replies with questions about the Ranger. I am looking for $200 and that includes shipping for the entire unit. Here are four pictures:

http://www.w9mdx.com/ranger1.jpg
http://www.w9mdx.com/ranger2.jpg
http://www.w9mdx.com/ranger3.jpg
http://www.w9mdx.com/ranger4.jpg

If I part the unit out, there are 4 components that everybody wants, the meter, the audio driver transformer, the mod transformer and the power transformer. To me that means that the rest is worthless so the meter would be $70, the mod transformer would be $60, the driver transformer would be $30, and the power transformer would be $40. Other components, such as the final tank or variables, tubes or pots or front panel or case or VFO or knobs, I would be willing to remove and include some assortment with each of the above items at no cost, except maybe a few scheckles for shipping for the panel or case .

If you think about it, most of the parts are hard, if not impossible, to find. Peter Dahl has new transformers at more than double the prices and you won't find a meter. Interested? Call or email.

Larry W9MDX

>

My Understanding is that phasing systems typically get around 35 - 40 dB
sideband supression if everything is near perfect... The problem is usually
slight differences in the amplitude and phasing of the two audio channels.
Well, that, and variation in the RF 90 degree LO splitter that changes the
RF pahse shift from one end of the band to the other.....

And, there is some change over time and temperature that usually degrades
the supression by a few more dB as time goes by.

The audio tends to sound 'better' since it isn't filtered to be as narrow
a bandwidth as most crystal filter rigs.

==========

A good crystal filter type transmitter usually has better sideband
supression and it also doesn't change much with time and temperature. It
also lends itself to making a transciever more easily since the filters and
oscillators are already in place.

In theory, a phasing SSB generator can offer perfect opposite sideband suppression. If implemented in analog tech, things are never perfect, so perfect suppression can't be achieved. However, if you do the SSB generation in DSP, then you *can* have everything perfect (at least to the numeric limits of the DSP). Opposite sideband suppression can be at least 90 dB with existing (affordable) DSP tech.

Some commerically produced amateur transceivers are now using this method of SSB generation (at a very low IF). There are also a few kits and construction projects for the do it yourselfer. One advantage of using DSP for this is that once you have an I/Q style modulator, you can use it to generate *any* arbitrary modulation form (AM, FM, SSB, PSK, FSK, etc) with only a software change.

A low IF DSP modulator/demodulator can be built for under $50 in quantity one from off the shelf parts (much cheaper in mass production). It hardly makes sense to spend the money for a crystal filter type SSB modulator today. The filter alone would cost more than the entire DSP subsystem.

(Of course you may want a filter anyway, on the receive side of a transceiver, to reduce the required dynamic range of the DSP by suppressing out of passband energy at the input to the DSP. But this filter can be less expensive than the one needed for classic filter/product detector designs, because the DSP can do a lot of the filtering while also doing the demodulation.)

Gary

The limitation for SSB on opposite sideband is set by the linearity of the power amplifiers. For a conventional amateur rig this limit is about 40 to 50 dB below PEP within the audio frequency range of the opposite sideband.

Am I correct in assuming that the energy in the opposite sideband caused by nonlinearity wouldn't be an image of the desired sideband, but a jumbled mass of intermodulation products from the components in the desired sideband? And that you'd have a similar mass on the other side of the desired sideband?

The brief comments above need some clarification.
Consider USB. The opposite sideband (LSB)
contains the following:

1) LSB products that are due to the IF filter
response below the carrier frequency. That is, LSB
output from an USB xmtr. My spectrum measurements
show 40 to 60 dB reduction of these products using
a filter-type rig, depending on how far below the
carrier they are.

2) Distortion products generated directly by the
PA. These are not filtered by the SSB filter. The
typical adjacent channel "splatter" generated by a
speech signal is a gross example, but some of it
is present even in a fairly "clean" transmitter.
This is a pseudo-noise output.

3) Wideband white noise created by the amplifier
chain that comes after the SSB filter. Definitely
not negligible.

4) L.O. phase noise with the usual "Xmas Tree"
spectrum shape.

All of these are received within the passband of
an SSB receiver that is tuned to the lower
sideband. This receiver also has reciprocal

mixing due to its L.O. phase noise.

The receiver is *integrating* all of the stuff that is in the LSB within a 2500 Hz bandwidth. The total of all of that is typically in the range of 40 to 50 dB below PEP for a medium performance SSB xmtr, and 50 to 60 dB in commercial xmtrs.

In view of all the sources of garbage in the LSB, an infinite LSB rejection in the SSB generator is not really justified, so far as SSB is concerned.

Chapter 17 of the ARRL Handbook, 1995 or later, also has a discussion of this topic.

Hello Scott, welsome to the wonderful world of playing with vacuum tubes !

I have quite a collection of them amassed over many years, beginning since I
was in my late teens. I'm not a business, but do sell privately here and there.

I test all before shipment and will guarantee them to be as described.

Feel free to write me with any wants you or anyone else may have, and i'll see if I have what you are looking for.

Happy 2002, let's hope this year was better than last !

Regards,
Joe Pratt ~:^)>

Well, the $30 did include shipping, along with the double boxing, which would be important to a collector to get a nice old heathkit box, not damaged.

As for the price, nearly $1500, lordy, my next door neighbor bought a dx60 kit brand new for something like $65. Little did we dream, in those days, what this stuff would sell for. Wonder if I can locate that little AT-1 I used to have?

Ebay Item # 1685871414
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1685871414

New Ohmite Little Devil 1 Watt Carbon Composition Resistor Assortment with Cabinet. Catalog Number: CAB-52. 100 Resistors total , 40 values, 1 Watt, 5% Tolerance, 10 Ohm to 10 Megohm values. In cabinet with individually identified separate compartments.

Completely sealed in Military packaging. (Pictured unit was opened but the lot for auction is sealed)

Made by Ohmite Manufacturing Company, Skokie IL. Price in Allied Catalog 990 (1999) is $275

Buyer pays actual estimated shipping charges. International bidders ok.

If you have any questions, please email me: mnowlen@yahoo.com

## 379. Re: Phasing SSB rigs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-11 15:00:38 UTC
From: Hans Summers <Hans.Summers@Tudor.Com>
Message-ID: <a1mumt$ra4n0$1@ID-61331.news.dfncis.de>
Source record: 45757
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

Don't forget polyphase shifting networks as opposed to the two-chanel types. They can acheive a much better sideband suppression but there are losses associated with the network. However according to a 1995 QEX article, instead of choosing a single value resistance or capacitance throughout the network, if you vary resistance and capacitances from column to column in the right way it is possible to obtain a flat response. I have built an 8-stage network using 0.1% resistors and capacitors also matched to within 0.1%. The values are calculated according to the QEX article. I have as yet not properly measured the response of the network, but at one frequency (1.8 kHz) looked at so far, the network actually showed a gain of 4dB with the values I used. I plan to use a Huff & Puff stabilised VFO at 56-64 MHz, to divide by 4 for coverage of 160m, 80m, 40m and 20m bands, driving a Tayloe switching detector. My Huff Puff VFO Stabiliser information page is at http://www.hanssummers.com/radio/huffpuff/contents.htm and details of my Huff Puff VFO circuit are at http://www.hanssummers.com/radio/huffpuff/fast/index.htm. At the bottom of this page is a photo of my polyphase network, though I have since then added the Tayloe detector and a 160m bandpass filter.

## 380. Wanted: Raytheon, Apelco, Webster CB equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-11 16:38:07 UTC
From: k5dh@raytheon.com
Message-ID: <PxE%7.271$kY4.5763@dfw-service2.ext.raytheon.com>
Source record: 45758
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.cb

Greetings from the Lone Star State...

I am looking for CB radio equipment by Raytheon, Apelco, and Webster. This would be equipment from 1960 through about 1971. There are certain models that I need for the collection, but I'll consider all models, in any condition, including parts rigs. Also looking for any kind of written information, such as manuals, magazine ads, product reviews, and so forth.

Check out the on-line Raytheon/Apelco/Webster CB Radio Museum at this address:

http://www.qsl.net/k5dh/raytheon.html

Lots of pictures, advertisements, and history.

Before anyone "bashes" me for inquiring about CB gear on the amateur radio newsgroups, I must point out that the majority of the gear in the collection and the majority of the historical information I've compiled has come to me from HAMS, not from CBers.

73,
Dean, K5DH

Message-ID: <3C3F609C.40192E89@erols.com>
Source record: 45768

I have a fully functional BC-348 and an external supply. The radio has NOT been trashed with mods and a dynamotor/base can still be re-installed. The lugged leads are intact. The case is in very acceptable condition, although its been oversprayed at some point in its life as have the knobs. Power supply "matches" the decor of the '348 (hi!) and has correct floating B- and 28v for filaments. Toilet seat covers are present. I've been using it regularly with my ART-13 but I recently acquired an as-new '348. I have no interest in selling this receiver, however, trade only. Looking for a BC-312/342 or other "BC" rigs in similar condition. I do have a very nice spare dynamotor and base that could become part of any trade.

## 391. R-1051 rack mounting brackets: who's interested?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-11 22:49:46 UTC
From: mikea@mikea.ath.cx
Message-ID: <d_J%7.2455$G%1.471661741@newssvr17.news.prodigy.com>
Source record: 45769

I found the drawing for R-1051 rack mounting brackets, and have located a metalshop that can work metal that heavy. I'm going to take the drawing by Monday, and hope to have a quote Wednesday or thereabouts.

These will be bare, unpainted aluminum alloy. If you want 'em painted Navy Gray, you get to do that yourselves. If enough people would like them iridized, I'll price them that way for everyone. The drawing calls for iridized metal, and I'm trying to get 'em as much like the factory stuff as posssible.

I need a tentative list of people who'd like to buy them, and the number of sets of 2 that each of the respondents would like to buy. People on this list won't be making a firm commitment.

When I have the quote, I'll mail you back with the price, and see how many are willing to buy them at that price. If you answer yes to _that_ letter, you will be making a firm commitment, and I'll be spending my money on your accounts. I'll also need a shipping address for each of the buyers.

Please Email me if you have any questions at all.

It depends on how far out from the carrier you look. Usually the carrier is set at around 20 db down the filter slope. So at low frequencies, if the audio response is not limited, the opposite side band will be down only 20 db near the carrier. As you go out, higher audio frequency, the suppression gets better.

I assume that you are referring to 3rd order IM products here.

>
>
> 3) Wideband white noise created by the amplifier

> not negligible.

This should be very low. In band noise, through the filter is much higher.

>

As a side note, a phasing type generator will have products show up on the opposite side band from 2nd order distortion products in the audio. 3rd order products do not show up on the opposite side band but do on the wanted side band. I think I have that right.

Hello,
I have been looking for a base for my 348, is the one you mentioned above
a spare base or do you only have one for the radio you wish to trade? If it
is a spare what other items are you looking for if you might wish to trade it?
Thanks
Gary

This is a complete 20 Mhz to 2 Mhz military surveillance system. It is complete with all modules and in good working order. It also includes all documentation and connecting cables. It is surplus to my needs and I have to move it out of the shack. The only catch is that it is in Anchorage Alaska and I am unwilling to attempt packing and shipping. If you can pick it up or arrange for it to be packed and shipped it is yours for the asking. This equipment was removed, about three years ago from the surveillance suite of HMS London. All equipment dates from the early 80's.

Mike Taylor
AL1N

PS I will hold it until the summer if anyone is coming to AK with a camper this summer.

Greetings,

I'd like to thank all of you who visted the website( http://www.sauderelectronics.com ) and ordered, what great support the online community has shown for the site and its products. To answer many of you: Yes, the prices on the items are not introductory, they will remain the same as long as our customers(you) continue your great support. I'd specifically like to thank Frank Leaf who was extremely helpful in our online endeavor and volunteered to help with website improvements.

So, with no further ado, I announce our January USENET only specials! These specials are not posted anywhere else(except the website) and were designed for everyone who has supported our effort thus far:

1. Pack of 10 Silver Teflon PL259s for ONLY $8.00!
2. SMA Adaptors, mix and match, 3 for ONLY $10.00!
3. UHF SO239 3" Mag Mount, $2.00 off the regular price of $15.00 for ONLY $13.00!
4. Any order over $25.00 receives a special mystery gift FREE!

Order now at http://www.sauderelectronics.com

Thanks, and 73's

-Ben

That's right for a *filter* rig. But a DSP phasing rig can offer the same good suppression at the lowest audio frequencies as it offers at higher audio frequencies. In other words, it isn't limited by the slope of a filter's response characteristic. The Hilbert transform used is frequency invariant. To compensate for the poor suppression at low audio frequencies, most filter type SSB rigs band limit the audio modulation, suppressing the lower frequency voice components before sending them to the modulator. It isn't necessary to do this with a DSP phasing modulator.

For *communications* quality speech, eliminating the lower frequency audio components isn't a detriment, but it can be for other purposes (for example SSB SW broadcasting, where best practical fidelity is desired, or for the current amateur rage for high fidelity audio). Other operating modes than voice can also benefit from the better fidelity (examples, PSK31, SSTV, etc).

>I assume that you are referring to 3rd order IM products here.

This is an argument for better PA linearity. The usual amateur practice
of trying to get the maximum output out of the smallest cheapest amplifier
tends to make this worse than it has to be. It is possible to do considerably
better than usual amateur practice, and do it with good efficiency too. As
example, our Harris Gold Line broadcast transmitters use very high efficiency
switch mode amplifiers which provide excellent fidelity at the cost of an
increase in amplifier complexity.

>> The receiver is *integrating* all of the stuff

As you say, *all* of these spurious products are integrated by the receiver.
Reducing any one of them improves matters. In other words, you can't output
a cleaner signal than is input, so you want to start with the cleanest practical
input. Attacking every source of spurious after the modulator can improve
matters even more.

(It should be noted that *atmospheric* noise is typically the limiting factor
at HF. Reducing spurious below that noise floor is of little benefit except to
nearby stations, where the near-far relation makes even relatively low levels
of spurious of concern. The FCC permits a higher level of spurious output
for HF rigs than for VHF+ rigs, but in today's urban areas we need to be
concerned about the effects we may be having on our amateur neighbors.)

More to the point here, though, is that it has become cheaper to generate
high quality SSB using a DSP I/Q modulator than it is to do it with a
conventional filter type modulator. So, even if the improvement in spurious
were to be small in practice, it is now more cost effective to use the phasing
approach. Plus, use of a I/Q modulator offers other benefits to the operator
which are essentially "free" with this approach, ie an I/Q modulator can
do any arbitrary modulation form. This is of practical interest to amateurs
who wish to use any of the several newer communications modes. Instead
of trying to jury rig things at audio and push it through a conventional SSB
modulator, you can generate the signals directly in the modulation process,
with better fidelity and likely lower total system cost and complexity.

This discussion, for me, pertains only to Amateur Radio. In this environment, economics and the cost-of-ownership (already quite high for many, which is probably why QRP and boatanchors are so popular) do not lead to extremely low levels of out-of-band emissions from the transmitter (due to all causes) or extremely low levels of susceptibility (due to all causes) in the receiver.

The receiver, tuned to the LSB, is an equal contributor to the LSB garbage because of its reciprocal mixing and its selectivity (which extends somewhat into the high-energy USB channel).

Despite the so-called Hi-Fi SSB clique who want to hear 15 Hz (all of which is nonsense, in my personal opinion), amateur SSB is a voice comm mode in which 300 to 3000 Hz is, and should be, the desired band. Frequencies outside that range can, and should be, attenuated very considerably.

The receiver cannot be ignored in the system analysis. It is just as important to the total "channel" as the transmitter.

Also, in transmitter or receiver, DSP is (and will be for a long time except for flea power systems) far removed from the antenna, and that provides a lot of opportunities for degradation of the signal, transmit or receive. I am familiar with the sales pitch for DSP, and that is OK, but like so many things it has been hyped beyond its *real* value.

As a practical matter, filter rigs that use high quality filters (xmit and rcv) provide out-of-band quality that is more than adequate, considering

the *entire* picture. It isn't true that there is only "one way to go" and all other ways are "just plain dumb".

No, I am not dwelling in the past, I am in the year 2002.

The entire issue of opposite sideband rejection can be rendered rather moot, if one uses the "Weaver" or "3rd method" of generating SSB, which is a variation on the phasing scheme.

In the Weaver method, you have the advantage that the desired and undesired sideband occupy THE SAME frequencies (they are overlaid on each other).

Thus, imperfect undesired sideband rejection doesn't fall on an adjacent channel, but instead appears as a slight increase in distortion in YOUR OWN channel. However, if that distortion is 40-50 (or more) dB down, which is pretty reasonable, it will be of little or no consequence.

This is true only if the two required lowpass filters are ideal boxcar FIR filters, which is the same as the requirement for conventional SSB using the phasing method. The Weaver method is no panacea either.

I don't think economics plays much of a role for most people
in the decision to operate boatanchors or to homebrew. I think
that cost sensitivity is more of an issue for manufacturers of
mass produced new equipment. In any event, the DSP I/Q
modulator approach has become the cheaper alternative to
a good quality filter type modulator.

The use of higher linearity PAs remains something of a daunting
problem for the users of *any* type of SSB modulator. A high linearity
PA remains either complex or inefficient compared to the methods
ordinarily used by amateurs. But it is something that amateurs should
be considering in today's crowded conditions. It can be achieved.

>Despite the so-called Hi-Fi SSB clique who want to

I don't disagree, but people use SSB type transmitters
for other things than voice communications. So the
advantage of better sideband suppresssion at the
lower modulating frequencies is a nice benefit, as is
the ability to directly generate other modulation forms.
And there's no cost penalty to be paid for those features.

>As a practical matter, filter rigs that use high
>quality filters (xmit and rcv) provide out-of-band
>quality that is more than adequate, considering

I agree with you there too. I was just pointing out
that the DSP phasing approach can match or better
the performance of a good filter modulator, and can
cost less too. Better *and* cheaper is a hard
combination to beat.

Also, the DSP approach eliminates the concerns
about temperature sensitivity and component
variations that plague the analog phasing approach.
It can't get "out of adjustment". The phasing approach
almost dropped out of sight for years because of those
problems, but a DSP I/Q modulator solves them. This
has little application for the boatanchor operator, but
it should be of interest to the homebrewer.

Gary

No, it isn't the same. The Weaver method requires
more computational complexity than simply generating
a Hilbert transform.

AMATEUR RADIO NEWSLINE(tm) REPORT #1274 - January 11 2002

Amateur Radio Newsline report number 1274 with a release date of
Friday, January 11th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. No more taxicab Q-R-M plaguing a popular ham satellite and lots of FCC enforcement actions highlight this weeks Amateur Radio Newsline report number 1274 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: TAXI TO SATELLITE QRM ENDED

Some good news for satellite operators. Thanks to some hard work by the International Amateur Radio Union, the troublesome F-M signals to ham satellites from Mexican taxi cabs are for the most part gone. Amateur Radio Newsline’s Norm Seeley, KI7UP, has the details:

--

According to the IARU Monitoring System newsletter it now appears that FM radio transmissions from the taxi drivers in the cities of San Luis and Sonora, Mexico area are no longer getting into the 2-meter uplink of the UOSAT 14 ham satellite.

The issue was raised by many involved in ham radio satellite communications including Ray Soifer, W2RS, of AMSAT North America. The newsletter says that it was Soifers plea to the VHF and Satellite Committee at the 2001 IARU Region 2 Conference in Guatemala City generated extra interest and concern about this and similar problems. This lead to some very productive discussions between the Mexican telecommunications administration and the Federación Mexicana de Radio Experimentadores which is Mexicos national Amateur Radio society.

Credit also is given to Alejandro Pereida, XE2BSS, for his thorough technical analysis of the problem and for his persistence in pursuing the matter from beginning to end. The end being the removal of the interfereing signals from the UOSAT 14 two meter uplink passband.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP, not far from the U.S. - Mexico border in Scottsdale Arizona.

--

The newsletter reports that after a lot of correspondence and negotiations on this issue took place over the past eighteen months. It also credits Lorne Libin, XE1V, as being an important mediator during this period. (AMSAT)

**

HAM RADIO AND THE LAW: NEW HAMPSHIRE HAM WINS ANTENNA CASE

Meantime, a lot closer to the ground, the ARRL Letter reports that a New Hampshire ham appears to have won a battle to erect an antenna support structure on his property. But says the League, it remains to be seen, however, whether Jerry Muller, K0TV, of Hudson will be allowed to erect the extensive system of three towers that he'd originally planned.

Unlike many amateur antenna battles, this case did not pit Muller against the town. In December 1998, Muller applied for a permit to erect three 100-foot antenna structures on his property, and the town of Hudson granted the permit. Three of Muller's neighbors appealed the grant of the permit, but the Hudson Zoning Board affirmed the grant. The neighbors then sued the town and won, resulting in the order for Muller to dismantle the towers.

Now, in a 4-0 vote, with one justice abstaining, the Supreme Court of New Hampshire has reversed a lower court ruling but it is not a 100% victory. Writing for the court, New Hampshire Chief Justice David A. Brock concluded that the lower court's order requiring Muller to dismantle his towers violated the limited federal preemption known as PRB-1 as well as New Hampshire's statutory codification of PRB-1. However Brock also agreed with the lower court that Muller's three-tower installation did not qualify as a "customary, incidental and subordinate" accessory use permitted by Hudson's ordinance.

While another amateur in Hudson has a tower at the same height, there are no instances of three such towers on the same property. Nevertheless, Brock said that Muller's installation may be permitted within the framework of PRB-1, if Muller can demonstrate that his three towers are necessary to "reasonably accommodate" his communications needs. (ARRL)

**

THE WAR: 73’S GREEN SAYS US COMMUNICATIONS ILL PREPARED FOR TERROR ATTACKS

73 Magazine El Supremo Wayne Green, W2NSD -- thats his title not ours. El Supremo Green says that the United States is ill prepared to handle communications in the event of another terror attack. Writing in his Never Say Die editorial column, Green says that no matter how the terrorist network hits us, the one thing we are going to need is communications. And this says Green, this is another item that the government has been lax in providing.

Green notes that anytime there is an emergency, the first things to disappear are electric power and telephone service. This includes cellular as well as wired phones. He notes that police, fire, rescue and other services have no way to inter-communicate until ham radio operators arrive on the scene. He says that if ham radio is going to be called on to provide services anywhere and at any time, then we need at least 600,000 licensed hams trained and ready to help, and not just the 100,000 or so that are now really active.

Green’s comments begin on page four of the January issue of 73 Magazine. (73 Magazine)

**

THE WAR: PIRATE HAM OPERATION FROM AFGHANISTAN

You may find this hard to believe, but even with a war going on some joker is pirating the YA5T call-sign and pretending to be on the air from war-torn Afghanistan.

According to Peter Casier, ON6TT, and the Radio Society of Great Britain all the operators who had previously put YA5T on the air have left Afghanistan. Casier tells the RSGB that he expects to travel back to Islamabad on the 20th of January and then to Kabul within the following few days. Until then, any station you work claiming to be on the air from Afghanistan is most probably somewhere else in the world.

We will have more D-X news later on in this weeks newscast. (RSGB)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Condor Connection repeater intertie thanks to KC6SFP and heard throughout the South-Western United States.

(5 Sec Pause Here)

**
FCC: THE VANITY CALL SIGN PROGRAM MAY RESUME SHORTLY

Some god news for hams waiting for vanity call signs. According to an ARRL bulletin, the vanity program which was put on hold since October 14th as the result of the post 9-1-1 Anthrax mail scare may could be in operation shortly.

The vanity gridlock got started after mail received between October 15th and November 1st was diverted from the FCC's Gettysburg, Pennsylvania, office for decontamination in the Washington, DC, area. That mail, believed to contain more than 100 vanity applications filed on paper, has not been returned to Gettysburg.

Current FCC policy says that paper and electronic vanity applications get equal processing priority, so the Commission halted vanity processing altogether until it could resolve the mail snafu.

FCC staffers in Gettysburg have been attempting to work around the roadblock. Using vanity fee payment data from the FCC's fiscal agent, Mellon Bank in Pittsburgh, the FCC's Wireless Telecommunications Bureau in Gettysburg has been contacting applicants directly to have them resubmit their applications. The FCC now is asking applicants whose paper vanity filings may have arrived at Mellon Bank between October 15th and November 1st and who have not been contacted to get in touch with the FCC to find out if they need to forward a copy or facsimile of their original paperwork. The request affects only vanity applicants who filed on paper and not electronic filers.

More information on whats happening in the ham radio vanity call sign program can be found at the ARRL Website. Its in cyberspace at www.arrl.org under W1AW

Bulletins for the year 2002.

And late word in. The FCC has begun processing some vanity call signs as this newscast is prepared. (ARRL)

**

ENFORCEMENT: EX-KV4FZ'S NEW LICENSE APPLICATION DESIGNATED FOR HEARING

I'm Bill Pasternak, WA6ITF. The FCC has designated a new ham radio license application filed by Herbert L. Schoenbohm, the ex-KV4FZ, for a public hearing. According to the order released on January 9th, the hearing will determine whether Schoenbohm possesses the requisite character qualifications to be a Commission licensee. Schoenbohm lost a series of appeals during the 1990's and was ordered off the air last year. He was given twenty days to request that the hearing on his new application be held. If he fails to do so, his application will be dismissed. More on this story, next week. (FCC)

**

ENFORCEMENT: YOU CANT SEND FELONY COMPLAINT AFFIDAVITS TO OTHER HAMS

The FCC wants to hear immediately from any ham who receives notification that a felony complaint has been lodged against him or her by Glen Baxter, K1MAN. This after the government tells the Belgrade Lake Maine operator to stop sending other radio operators so-called Standard Felony Complaint Affidavits. Speaking on his Rain Enforcement Log, FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says that this is not the first time Baxter has been warned:

--
Hollingsworth: "We reiterated a warning issued by the United States Attorney in Maine to a Belgrade Lakes operator who had sent so-called Felony Complaint Affidavits to licensees who had refused to clear the frequency for his broadcasts, or bulletin shows or whatever they are. Complaints about the nature of the transmissions are also under review as well, and we will be looking at those. That went to Glenn Baxter, K1MAN.

The United States Attorney in that case has warned Baxter that if he continues sending the so-called Felony Complaint Affidavits he may be subject to federal criminal charges for misrepresentation and for using the U.S. Mail to make threats."
--

If you receive one of these Standard Felony Complaint Affidavits, or notification that one has been filed against you please contact Riley Hollingsworth as soon as you can. He can be reached by e-mail to fccham@fcc.gov. (FCC)

**

ENFORCEMENT: FCC - ALLEGEDLY UNCOORDINATED IN CALIFORNIA

Still with enforcement news, the FCC has notified Dean K. Perrins, N6HWI, of Freemont California that his alleged uncoordinated repeater on 443.725 MHz is causing interference to the coordinated K6TWI system. This is a repeater which operates on the same frequency.

The FCC says that it has information that Perrins has been notified several times
regarding the interference problem but that he has not taken any steps to resolve the problem. Perrins was given twenty days from the date of notification to respond to the FCC. (FCC)

**

ENFORCEMENT: FCC - ALLEGEDLY UNCOORDINATED IN FLORIDA

In still another repeater interference case Joseph Bushel Jr., W2DWR, of Live Oak Florida has been directed by the FCC to respond to a complaint that he is operating a repeater on 146.94 MHz after being denied coordination by the Florida Repeater Council. The FCC says that Bushel's repeater is causing interference to the coordinated K4EHM system and the government wants him to explain his actions. The FCC also wants W2DWR to respond to an allegation that he was observed transmitting a digital voice recording an that frequency without ever identifying the transmission. (FCC)

**

ENFORCEMENT: FCC- DON'T TALK ON THAT REPEATER

Meanwhile, another Florida ham identified as Thomas Banks, KB4AN of Port Saint Lucie Florida has been notified by the FCC that he is to refrain from using an area repeater. Specifically, the FCC has told Banks that he is not to be heard over the Saint Lucie Repeater Association's AF4CN machine as requested by the system's trustee. (FCC)

**

AWARDS: ARRL EDUCATOR AWARDS NOMINATIONS SOON CLOSE

According to the American Radio Relay League, nominations close January 31st for League awards that recognize excellence in teaching. The ARRL Instructor of the Year, Educator of the Year and Professional Instructor of the Year awards will be presented, as well as the ARRL Excellence in Recruiting Award. All winners receive engraved plaques. Complete information and nomination forms are available at www.arrl.org. (ARRL)

**

AWARDS: DARA NOMINATIONS TO CLOSE

The nominating period for the 2002 Dayton Hamvention Awards is quickly coming to an end. The deadline for nominations is also January 31st.

There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence. All amateurs Novice through Extra are eligible.

Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned.

Nominations can be sent to Post Office Box 964, Dayton Ohio 45401. They can also be filed electronically by completing the e-form on the web at www.hamvention.org. (DARA)

**

AWARDS: NEWSLINE NAMES FOUR AS SUPER SUPPORTERS

The Amateur Radio Newsline has named four hams who will receive its first Super Supporter Award certificates. Don Wilbanks, KC5MFA, has the names:

--

In alphabetic order, the first certificate goes to Roy Blanchard, N5YHS, right here in New Orleans. It was Blanchard whose assistance made it possible for Amateur Radio Newsline to become a federally tax exempt coropration.

The second is earmarked to Dale Cary, WD0AKO for his decade plus work in putting the Amateur Radio Newsline on the Internet and creating the Amateur Radio Newsline website.

Sandy Donahue, W4RU, receives a Super Supporter certificate for his many years of coordinating the arrival of the Newsline Young Ham of the Year Award in Huntsville Alabama, and the recipients registration at Spacecamp. And for the last several years he has also helped to defray the cost of the mini-banquet held to honor the winners.

Last but by no means least, Todd Hitzeroth, N6ZXJ, was recognized for his years of volunteering with Newsline at its Dayton Hamvention booth and engineering the Ham Radio Town Meetings. What makes his contribution unique is that Hitzeroth lives in California and pays his own way to and from Dayton each year.

With congratulations to all four recipients, I’m Don Wilbanks, KC5MFA.

--

Approval for the creation of the Amateur Radio Newsline Super Supporter certificates and naming of the first four recipients took place at the organizations Board of Directors Meeting held in Glendale California on December 30th 2001. A synopsis of the minutes of that meeting will be posted to our website within the next few weeks. (ARNewsline(tm))

**

INTERNATIONAL-ISRAEL: “FIRST” BRINGS IN NEW HAMS

A new group of radio amateurs has emerged in Israel from a rather unexpected place. According to Hagal International, the new Israeli hams are from an all volunteer Search and Rescue group called First.

First members are on call to provide wilderness rescues in areas such as the Israeli desert and canyons. For communications, First members have long carried two-way hand helds operating in point to point simplex mode. The limitations of simplex in rugged terrain means that there are times when they cannot keep in touch.

Recognizing a need for improved communications, First contacted to Israel Amateur Radio Club to ask if the nationwide repeater system could be made available for search and rescue use. And according to veteran ham radio instructor Moshe Inger, 4Z4PF, when First members learned that they would first have to pass an Israeli ham radio exam, they did not flinch one bit. They studied, passed the test and there are now dozen new hams from Eilat in the South to Golan in the North. (Hagal International)

**

INTERNATIONAL-UK: G3YJO BECOMES SIR MARTIN SWEETING

Meantime, over in the United Kingdom word that Martin Sweeting, G3YJO, on being knighted. Sweeting is the Chief Executive of Surrey Satellite Technology and Director of the Surrey Space Centre. He will join Sir Jimmy Young and Sir Ben Kingsley to collect his Knights Bachelor medal from the Royal Palace. Professor Sir Martin Sweeting, F.R.S., was knighted for his services to the U-K in microsatellite engineering. (RSGB)

**

HAM RADIO IN SPACE: QUIET HOURS FOR AO-40

AMSAT reports that AO-40 satellite ground controllers have begun adjusting the spacecraft's attitude as it enters a period of adverse sun angles. The satellite is currently in a long period during which Earth eclipses the sun near perigee. These periods will continue well into next June. As a result, AO-40's operating schedule has been modified to reflect the decreasing attitude longitude. (AMSAT)

**

HAPPY BIRTHDAY: JOHANNES KEPLER AT AGE 470

VK2KGM notes the 470th recorded birthday of Johannes Kepler last December. Kepler was the first astronomer to determine a mathematical relationship existed that could be used to predict the motion of planets. This became the basis for the Keplerian data we use today for satellite orbits. (AMSAT)

**

DX

In DX, word that F2JD is active from the Philippines as DU1 slash G0SHN on 20, 15 and 10 meters SSB and CW. Listen for him from now until June of this year. QSL as directed on the air. (RSGB)

Three Finnish operators will be active from Tonga through the 15th of January, with an emphasis on 160 to 30 meters. They will work CW, SSB and RTTY with three stations using verticals and dipoles. (Modern DX)

**

THAT FINAL ITEM: FANTASTIC VOYAGE REDUX

And finally this week, the world of medical communications research has finally caught up with the lights of Hollywood. This, as the government approves a tiny radio camera-in-a-capsule that patients can swallow. It is a camera that will transmit pictures to give doctors a close-up view of what is inside of you. Amateur Radio Newsline’s Mert Garlick, N6AWE, has more:

--

The new transmitting video pill is made by Given Imaging Ltd. in Israel. It is called the M2A Swallowable Imaging Capsule. It is also exceeding tiny. In fact it is so small that it is easily swallowed by the patient.

Its inventors say that it then painlessly winds its way through the digestive tract and uses wireless technology to transmit full color pictures to a belt pack receiver worn by the patient. That unit also decodes the signal and records the information as the patient goes about his or her daily routine.

A U.S. spokesman for Given Imaging says that doctors who wish to use the video imaging pill will have to buy a specialized $20,000 computer workstation. Each camera capsule costs about $450.

For the Amateur Radio Newsline, I’m Mert Garlick, N6AWE, in Los Angeles. Roy.

--

The entire system is reminiscent of the science fiction movie "Fantastic Voyage." In that film a submarine and its crew of medical specialists are miniaturized and injected into the bloodstream of a critically injured man to perform an operation to save his life while receiving instructions by two way radio. (Science Today)

# 427. WTB : manual RCA GR-10

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 03:26:43 UTC
From: John Bartley <jcb@igs.net>
Message-ID: <3c40fb74_1@corp.newsgroups.com>
Source record: 45805
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I am looking for a manual for an RCA model "RCAF GR-10" six band receiver.
I need a manual with at least a schematic, and preferably (if the planets
are lined up and the Gods are smiling on me) with the alignment
instructions. I'd be very happy to pay well for a good scan or photocopy.
Thank you

## 428. Re: FS: Collins TSC-60(V)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 03:28:05 UTC
From: rhampton2 <rhampton2@carolina.rr.com>
Message-ID: <3C40FEF6.C3B5866D@carolina.rr.com>
Source record: 45806

Sorry, but I don't have the manuals or, from my recollections of 15 years ago, a library big enough to hold them.

Assuming you're not familiar with the system, I'll offer the following:

Pro's
1) It was a helluva system. 4-channel ISB per transmitter and receiver, with two of each. Output power to the antenna (with the Collins 208U-3A power amps) was 1.5 KW in low power and 2.5 KW in high power, not input, but DELIVERED TO THE ANTENNA! (For you QRO types, there was a separate amplifier in another transportable shelter that took the power up to 10 KW, again delivered to the antenna!)
2) With the TTY mux's, you could put 16 channels of TTY on one sideband and run SSB on the other three. Or, you could run "speech plus" and superimpose one channel of TTY in each of the ISB's for a total of 4 channels of TTY and 4 speech channels, simultaneously.
3) The antenna patch bay allowed for space diversity, frequency diversity, or both. There was also a TDM (time diversity multiplexer) installed in mine. Barring an X-class flare, you almost NEVER had a propagation outage. I routinely ran transcontinental TTY data circuits 24x7 for days on end with nary a seconds outage or downtime. Try THAT with regular ham gear!
4) The system had a wonderful MTBF. In five or six years of supporting this thing, I think I only recall REALLY digging into it to install mods and maybe fixing two or three blown components.

CON's
1) Without the PA racks, you'll have one of the world's most expensive QRP rigs. If I recall correctly, the output from the exciter rack was on the order of 1.5 to 2 watts. It may have been more, but not much.
2) Only two of the four sidebands are usable with normal ham gear. The upper-USB and the lower-LSB use a different IF than the USB and LSB, and are 4(?) KHz away from the carrier. Only another ISB system can properly demodulate them.
3) There are a lot of custom semi's in the system, especially the control heads. I'm talking made by Rockwell, for Rockwell, for this system only. Lose one of those, and you'll have one helluva boat anchor/paperweight.
4) Can you say, "multi-layer PC boards with surface mount components?" It was cutting-edge for a '60's design. "Surface mount components in a '60's design," you ask? See CON #3. Popular rumor of the time was that some of the stuff from the Apollo space craft computers made it into this system.
5) The "dither" circuit used to control the tuning. I never did understand that one....

If you find the manuals and successfully bid on the system, GOOD LUCK!
You will be a braver man than I.

## 430. Knight Kit R195 & Star Roamer II manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 03:56:47 UTC
From: Ray Keefe <KC2GMN@YAHOO.COM>
Message-ID: <3A708.948$pe.45@nwrddc01.gnilink.net>
Source record: 45808

Does anyone have the assembly and alignment manuals for the Knight Kit Star Roamer II and the R195 receiver. These solid state receivers are of 1970's vintage. Good clean copies and or clear scans would be appreciated.

I was just handed a pair of the Star Roamer II's and one R-195 all partly built, but the wiring was not completed. Of course no manuals, just the original bags of parts and hardware.

Thanks

Ray Keefe
KC2GMN@YAHOO.COM

## 431. FS: photocopy of CQ's COMMAND SETS book

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 04:17:45 UTC
From: mcalhoun@ksu.edu
Message-ID: <a1r1p9$5l8@unix2.cc.ksu.edu>
Source record: 45809

I've sold all of my ARC-5 hardware, but while cleaning up I found a
first-generation photocopy of Wayne Green's 1957 COMMAND SETS
paperback book (which had a yellow cover in the original).

I recall it can be downloaded from somewhere, but for $10 I'd save
someone the effort and snail-mail this copy to anywhere in the USA.

Hi All, I'm in the market for a mod transformer for a B & W 5100. If anyone has one or a whole modulator deck please let me know what you want for it. Thanks & 73 de Jeff WA1VQY@HOME.COM

## 435. Heathkit chokes 46-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 06:30:28 UTC
From: "Michael A. Terrell" <michaelaterrell@netscape.net>
Message-ID: <3C41292C.FF93DA6B@netscape.net>
Source record: 45813

Heathkit chokes 46-3. I have at least a dozen of these, and I was wondering if they were used in any of the Heathkit ham or test equipment. They came from some of their educational kits at a vocational school. They all appear to be new, so if someone knows where they can be used, please let me know. I'd like to see them end up in some restored equipment.

## 436. Collins R-388 modification info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 07:39:54 UTC
From: maritimus49@aol.com
Message-ID: <20020113023954.07379.00001693@mb-fq.aol.com>
Source record: 45814

I would like to hear from R-388/51J3/4 owners who have done modifications to their receivers. I am interested in adding the product detector mod, the mixer mod, agc mod, etc to my R388(51J3). Since there are many articles about these mods that have been written over the years I was wondering if there are any opinions as to which are the best? Thank you for your assistance.

73,
Bruce K6RQR

I think there are a few other ideas to be thought about in this discussion..

One thing is, the question of how high in frequency the phasing Tx IQ modulator would be working at. If it will be used on the desired Tx frequency directly, then the RF phasing network becomes a concern, particularly if one is trying for more than one ham band.

Another one is, will the same piece of equipment be used as a basis for a transciever.

A DSP I/Q phasing type system introduces a few twists on the reasonable dynamic range, and if one converts down to a low enough IF for a DSP system, then mixer spurs and intermods become a larger issue than a single conversion to a high IF crystal filter.

Those same mixer spurs haunt transmitters too, particularly if starting from a low enough frequency for DSP chips to easily run at.

==========

With surplus timebase crystals, I was able to construct three multipole crystal filters and when I cascaded them in an IF strip, I got STEEP filter skirts. The total cost of all three of the filters together was about $15...

And I know darn well that by the time I got done with a good DSP chip, CPU to run it, and for the Rx something like a pair of 16 bit or better A/D chips for dynamic range, I'd be WAY higher in price.

==========

It seems to me that a homebrewer is more likely to be interested in making a transciever, and may perhaps not be easily able to deal with DSP code and so on.

A DSP and an IQ modulator do have a place in the thinking. But as with most engineering, there are good and not so good parts to any approach.

And, I will admit, I come from an analog background. I'm inclined to use easy to understand and proven to work well types of designs.

Well, OK, so I am planning on a DDS based LO chain. Gotta clean up the digital spurs they generate, but I do like the stability.

From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3C418B9B.E359522D@ix.netcom.com>
Source record: 45821

I received 24 responses.
Experience shows that after Murphy gets through with everyone,
about 30% of people who say they can come actually get to do so.
I know most of the respondents and feel confident that at least
50% would make it in this case.
Since this would likely be held at HamCom,
there would be a certain amount of "walk in" attendees.
If I had to bet, I'd say we end up with about 30-35 people.

I was thinking of holding an actual seminar with a famous
guest speaker, but that level of attendance
wouldn't justify the expense.
I'll see what else can be done in a less formal setting.

You certainly can. Fancy (and expensive) antennas aren't very good and don't have any secrets in them, regardless of advertising hype.

A good antenna has to be large and installed in a clear, high place. No shortcuts work.

## 457. FS two Drake T4-XB transmitters (& PS), for parts...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 18:44:41 UTC
From: Arthur Sowers <arthures@magpage.com>
Message-ID: <a1skip$rlo$0@216.155.0.50>
Source record: 45835

I have two T4-XBs that are presently non functional. Been in storage for a while. There are two AC-4 (AC) power supplies, and one is inside an MS-4 speaker cabinet. There is some dust and discoloration, and paint flecks off the cabinet, otherwise no dents etc. Some of the knobs are different, but not too many. Crystals for 160 and parts or all of ten meters. There were some minor modifications, for one, there is a "transmit-receive" miniswitch added to front panel of one transmitter. I have almost a complete spare tube collection, including a matched pair of 6JB6s bought from Drake about two decades ago and never used or checked. The bottom of the chasis are very clean and I think you would have to look HARD to see any evidence of aging. Both rigs were on the air from about 15 years ago and on back and with no problems. One has somewhat soft finals, but puts out maybe 70-80% of the carier that the other one put out when they were both used.

Someone with the time, bench space, etc., could restore these with probably little effort OR use them for spare parts. I've decided to part with them, either piece at a time or whole package or parts of the package. I have one transmitter manual to pass along with with the package. Whole package (two transmitters, two powers supplies, individually wrapped, burried in styrofoam peanuts, boxed) including shipping costs to UPS points in the USA: $60.00.

# 458. FS:Collins project radio- KWM2, suitcase, power supply

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 19:44:34 UTC
From: jimmoci@aol.com
Message-ID: <20020113144434.18059.00001362@mb-fd.aol.com>
Source record: 45836

For Sale: Collins KWM2, PM-2 and Collins suitcase. All winged emblem.
I bought this as a project 10 years ago- never messed with it. I have a mint KWM2 and figured I would save it for parts but have never needed any (Luckily!)

Condition- Broken AS-IS. I just plugged it in. The PS appears to work fine. The radio has audio and was recieving stong signals with a 20 foot piece of wire in the antenna jack. The sigs did not seem to be anywhere near as strong as they should be though. Wiggling the bandswitch brought them up. All the controls and pots are dirty and need a good cleaning/lubrication. The back of the exciter tuning shaft in the radio has a metal band that should be attached. It is not and appears broken. This is a mechanical problem- not electrical. The slugs in the transformers are moving up and down when I move the excitier tuning knob but the ones toward the back dont move as much as the front ones so this must be repaired to get the radio functioning. I did not try transmitting because of this problem.

Cosmetics: The rig is probably a 6 out of 10. The cabinet is dirty and has some scratches. A good cleaning will make it look acceptable but I would repaint it. The front is in pretty good shape with some very small scratches- Nothing objectionable. All the knobs are there but the VFO knob needs repair. The trim ring behind the knob has broken loose and needs to be glued back to the VFO knob. The PM2 is also dirty and needs a good dusting and cleaning- could probably use a fresh coat of paint. Probably needs to be recapped for reliability.

The suit case is in ok shape- also needs a good cleaning. It is not cracked or dented, but has some minor scuffing and scratches.

I also have a manual to go with this. The manual is in good shape. It is the large manual, not the small instructions only manual.

I am asking $600 for everything. I accept Pay-Pal, personal checks (10days to clear), and Money orders. Cleared pay-pal payments and Money orders get shipped within 24 hours.

Thanks! Jim

## 459. DSP Question re: sprucing up the receive on my Atlas 210X

## 462. FS: Drake SSR-1 shortwave receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-13 22:37:09 UTC
From: Michael White <m.white66@verizon.net>
Message-ID: <p_n08.13227$Ep1.2365@nwrddc02.gnilink.net>
Source record: 45840
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For sale, a vintage Drake SSR-1 shortwave reciever. In excellent condition; a few small dings on top edge, and a "burnish mark" on the speaker grill you can only see if the light catches it right. Case is excellent, no corrosion in battery compartment, antenna is perfect, power cord perfect, dial lights work. Works great, strong, clear reception on all bands. Overall, an easy "9". This receiver uses the famous "Wadley Loop" circuit for virtually drift-free reception. Covers entire HF spectrum in 30 one-megahertz bands. You can see a picture of the radio at:

http://members.verizon.net/~vze27dkg/ssr1.jpg

$175 plus shipping from 20164. Email if interested. Thanks.

Bruce,
I did the product detector mod from an old issue of Ham Radio on my 51J-4. Works ok but newer receivers that I have perform better on SSB (R71A & TS940). I dunno that it was worth the effort, in fact, if I want to ebay the thing, I'll probably remove the product detector mod for mo money. If you want a copy of the Ham Radio article, I could scan and email it to you.

The best improvement in listening came from the fact that my 800 Hz mechanical filter was dead (open coil, sad) so I removed the guts from the can and bypassed it with a capacitor to give "wide" AM response. The audio is almost hifi on a decent AM station. I don't recommend destroying a filter though for wide AM!

This old business of accepting the 300 to 3000 hz bandwidth as the "ideal communications bandwidth" I think is just that. Old. This is a carryover from the old telephone days when it was easier to limit the bandwidth to avoid some of the problems of transmission. Also most SSB rigs suffer some of the same problems. Especially limiting the lower frequencies. The old phasing rigs had problems maintaining a constant phase shift at low frequencies. How to correct for the problem, limit the low frequencies. Filter rigs have some of the same problems with side band suppression at low frequencies. This so called "communications quality audio that most rigs have is really next to awful audio. Especially when some of them are further degraded with limited range microphones. Some of the signals on the air make your ears bleed let alone hardly being intelligible. I think it is time and the technology is available that we can have much better sounding signals and still be well restricted in channel occupied width. There are so many really distorted transmitters on the air from poor audio processing to poor amplifier performance.
DSP seems that it would solve a lot of the common problems.

Gary, I wonder if you have experience with transmitting SSB with carrier. Sounds like you have a connection to Harris. What do they do in the transmitter to keep the distortion down in a common receiver with a diode detector receiving the SSB AM signal. As I am sure you know when you run a significant amount of modulation percentage the distortion gets quite high in this mode. Approaches 25% I believe at 100%

Regards
Gary

>> SNIP <<

While I agree that it is an "old business" I think it does fit in the general regulation that amateur radio systems use the minimum practical bandwidth while communicating to avoid interfering with other people.

Which is part of why they dropped AM transmitting and limited FM to 5 kHz...

Now, in real terms, the difference between 300-3K as compared to 10-10K is fairly substantial so I think limiting the upper frequency limit to something like 3K is a good idea since that would allow one or two other people to transmit without interference.

However, reducing the distortion in the signal being transmitted is a completely separate issue and I think it has more to do with equipment being badly designed and misused by audio compressors, driving some stage in non-linearity, and so on.

In the description of this ebay item is a fascinating description of one collector's appreciation and obsession for old (Scott) radios. Much kindred spirit shared on this newsgroup, too. After looking at the amazing chrome plated fixtures (unlike other high end audiophile equipment), I pondered why ham vendors never produced a rig as such. Then remembered that this hobby is called "amateur" radio, where experimentation is the hallmark, not the commerical market (or bucks).
Great pix of proper shipping containers, too!

Dear Tim. Was over at Bill, VE3AUI's last night. He was thinking of selling his GPR-90 (rare lime-green case and dial trim) and was wondering what folks got for them these days. He will be encouraged by your ad. Me, I'm left wondering. Is $2500 US really what a GPR-90 and SSB adapter are going for these days? I have the pair, and a GPR-90X as well. Cheers es 73 from London, Ontario. Harry, VE3GRO

P.S. Are you the Timtron? If so, have met at Rochester.

According to short wave listening tests by Radio Finland a few years
ago, in single sideband attenuated carrier (R3E) transmissions, the
carrier could be attenuated by -6 dB, without too much problems for
simple diode detector radios. If the carrier was attenuated by -12 dB,
a receiver with a BFO should be used.

I've read numerous times that a good deal of speech power is in the lower frequencies, yet very little information. If this is true, then the average and probably peak power can be reduced significantly, without any real sacrifice in intelligibility, by limiting the low frequency response. I've always thought this was one of the main reasons, if not the main reason, for limiting low frequency response for communications. If you want to sound pretty, boost that bass. If all you want to do is communicate the farthest with a given amount of power, roll it off.

I'll defer to the experts if anyone has a good source of contradictory information.

A followup to a posting I made a short time ago. . .

From Terman, _Radio Engineering_, Third Edition, p. 738:

"The low modulation frequencies are sometimes reduced in relative amplitude, or entirely eliminated, in radio systems designed to transmit speech where the emphasis is on intelligibility rather than naturalness. Such discrimination against the lower speech frequencies reduces greatly the total audio-frequency energy that must be handled, and so makes it possible to increase the degree of modulation for the more important frequencies. The loss in intelligibility is small, the gain in signal-to-noise ratio considerable."

>Pete (W8UXD)

Pete,

The Electric Radio article is in #81 (January 1996). It's by Chuck Teeters, W4MEW, who was involved in the use of R-388s in the AN/GRC-26A (they replaced BC-342s).

In the article, he calls it the R-388/51J-3. (note the "3") This version of the receiver has hi-Z input because it was meant to be used with a short whip antenna, not 50 ohms. This change was made because of loss of sensitivity due to mismatch when 50 ohm input was used with a 6 foot whip and 12 feet of RG-11 feedline. The input goes directly to the grid of the RF stage via a small capacitor. There's an antenna trimmer and IF output added, and the IF passband was widened by adding 2 uuF caps across the tops of the IF cans. These mods were made by Colins and the resulting rx called R-388/URR, stock number 2C4180.

W4MEW sez that using one of these receivers with 50 ohm input results in rather poorer cross modulation performance, not loss of sensitivity, as I thought. He gives detailed instructions on how to add low-impedance links to the RF coils and hook them to the bandswitch.

From the way the article is written it sure looks like W4MEW "was there when it happened". He also says that the TM glosses over this change.

Anybody have an R-388 that can confirm/deny this story?

## 494. FS: Globe 300 transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-14 14:24:10 UTC
From: gspubl@tca.net
Message-ID: <3c42e8f8.584930395@news.tamu.edu>
Source record: 45722

FS: Globe 300 transmitter from an estate sale. It has been bench checked for operation. 275 watts AM on 160 mtrs thru 10 mtrs (has built-in VFO). Looks very nice on the front and back panels with no visible mods. The cabinet is original paint and has a couple of stains on the top but the sides look nice. Complete with the original manual, $425.

## 495. FS: Johnson Valiant transmitter

Newsgroup: rec.radio.amateur.boatanchors

Source record: 45724

FS: Johnson Viking Valiant (original) transmitter. The front panel looks very good with original knobs and the cabinet looks good too but does have some stains on it. It has a manual and appears unmodified either on the front or rear. These transmitters really sound good on AM but are good on CW too. It came from an estate and I have had it sitting on my shelf for a long time haven't checked it out yet so I am letting it go in as-is condition for $275.

1. B&W 650 Matchmaster unit. This matches the B&W 5100 and 6100 transmitters. It is the SWR/Power meter that sits beside the transmitter and is in very good original condition, $125.

2. WRL Globe Vox-10 vox unit that works with all the Globe transmitters (and probably otheres too). It is a stand alone unit that gives your transmitter vox capability. Looks very good, $65.

3. Collins wattmeter. This is a stand alone unit with remote coupler. I don't see a model number but it has a black face and white writing. The knob used is identical to the ART-13 small knobs and is all original. It is in excellent original condition, $275.

AM is still alive and well and is growing in popularity. The newer format for FM is 2.5 khz deviation.
SSB can be transmitted in even a narrower that 300 to 3000 hz bandwidth but readability suffers even more. What I am saying is that there is better technology available today to have better fidelity and still not be broad banded.

I agree with what you say. However many of the rigs carry it to extremes to where they sound
awful. In an audio system if clipping is used to increase the average power level the low frequencies must be limited to avoid considerable distortion. However after the clipping circuit there needs to be good low frequency response in order to preserve the clipped audio
and not have overshoot. The high frequencies were normally rolled off to get rid of some of the distortion products produced by the clipping. This of course was done on a lot of the AM
rigs in the past.
With the SSB rigs things get limited by the filters that are used. Limiting the bandwidth does allow for more power in the mid band range but often times at a severe sacrifice in intelligibility. Probably 90% of the conversations on the ham bands are not taking place where you need every ounce of mid band power. I think most rigs could sound much better and still be just as useful.

But there are ways to accomplish these same enhancements these days without the serious band
limiting that has been done.

I overlooked one of the most important things.
Intermodulation products generated in one sideband
also appear in the opposite sideband. Suppose
in USB two test tones are 400 Hz and 900 Hz. One
of the third-order IMD products is at
(1)*(400)-(2)*(900)=-1400
which is in the LSB.

High quality amateur PA's have third order IMD in
the 40 dB-below-PEP range.

This problem involves only the PA and occurs for
any method of SSB generation.

Bill W0IYH

I'm looking for a 42.5 Mhz crystal in what I believe is the HC-6/U case
(large metal can). This is the crystal for the Low 10 meter band on the
Drake TR-3.
Anyone have a parts radio?

Thanks,
-- Jeff KD7PAW

A correction (darn it). The third order products
are at -100 Hz (LSB) and 1400 (USB) Hz. The fifth
order products are at -600 (LSB) and 1900 (USB).

Yes, first round. Along with a number of others. All the guys in the first round will be kept as "fallback" possibilities in case the one deal I'm working on falls through. I won't know that for a few days yet. Please be patient & don't keep your hopes up too much (but dont give up yet either).

I have received this from Stockholm Radio with a request to pass it on
to those interested.

"MF W/T services from Stockholm Radio to be discontinued

At 0001Z on 1 February 2002 a final broadcast will be made on 500 kHz
W/T over all remote transmitter sites, as the station's contract for
maintaining the telegraphy services expires on Jan 31.

This moment marks the end of a century of continuous presence on W/T
in the Stockholm region, as the first coast station in the area opened
in 1902.

All other services provided by the Stockholm Radio infrastructure;
NAVTEX, MF DSC + R/T, HF Air/Ground, VHF DSC + R/T, and UAIS services
will be continued."

Have for sale a very clean and all original Heath SB-200 - no extra holes, modifications etc. 80-10 meters using a pair of 572b's which are new and have 300 plus days of warranty left. Also have a new under warranty spare. Unit operates well and looks in very good condition. Full output - 500-625 watts out depending on line voltage and band. Sorry, do not have the manual. Lost it several years ago. Selling as this has been my back up amp for many years. $365.00 shipped - double boxed-
lower 48. Jpegs available upon e-mail request.
73 and thanks for reading.

Source record: 45651

I recently acquired an Impedance Measuring Unit, Model CA-546 S/N 101. The tag on the face says it was assembled by the Civil Aeronautics Administration (forerunner of the FAA?) Central Depot. From what I can tell it is not a conventional bridge detecting unit. The display meter is a 100-mA RF meter. There is no power input connector, no batteries. It is housed in a wooden box that has a copper shield all the way around the inside. Connection a 300-KC signal to the input at a level of 15 volts gave about 1/4 scale movement on the meter when adjusted and a capacitor connected across the UNKNOWN jacks. Anyone ever heard of this item or can tell me where to find info on it.
Thanks,
Wayne H.

## 524. Any T-195/GRC-19 experts?

Newsgroup: rec.radio.amateur.boatanchors

From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3C437215.412E9326@erols.com>
Source record: 45652

Well, I just acquired 2 T-195's and am trying to get one (at least) on the air. I lucked out on one of them, it has the "B" model HV supply. I have the manual set, too. Anyway, I got the drive signal cable setup sorted out and I can now see grid drive and PA current (on substitute meters I rigged into the circuit).

o The slug rack tunes just fine (?) but there is no motion from the big bandswitch, nor the "antenna tuning capacitor" (on top of unit).
o The antenna tune motor sort of quivers, in place and the adjacent capacitor "rack" does not change position with bandchange.
o The ribbon loading coil appears (?) to home, but that's about it.
o I can feel the heat from the PA (B+ is fine) and modulation power is there.
o No RF on wattmeter, although if I loose couple a scope near the PA, I can see an envelope.
o "Tuning" lamp does come on after a sequence appears to end, but nada on the output.

Would it be possible for me to somehow set this thing on 3885 and get all the functions in the right place, manually, and leave it there? Anyway, I'm just getting started on this project, and any clues would be appreciated. Thanks much!!

## 534. FS: Vintage Meters

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 18:42:14 UTC
From: Walter Treftz <penguino@atlantic.net>
Message-ID: <3C447806.7E193636@atlantic.net>
Source record: 45661

VINTAGE METERS

Old Hallicrafters-style (like is on the SX-28) illuminated
milliammeters. Have internal pilot light installed in rear to
illuminate translucent scale with reddish-orange glow.

3" x 3" square bakelite case. Requires 2-3/4" panel hole.

All have lugs and 5000mfd mica bypass. As removed from a late
1930's or early 1940's 1KW AM/CW HF transmitter. Some could use
cleaning. Zero-set screws work. Movements free when rocked.
Deflection when tested using ohmmeter. Digital pictures
available. All are mfd by Triplett.

Model: Range: Price: Remarks:

321A 0-500madc $10.00 Missing pilot light fixture and
minor crack in face.
327A 0-150madc $15.00
321A 0-150madc $15.00
327A 0-300madc $15.00
327A 0-75 madc $15.00
0-200madc $ 8.00 Can't get apart, missing the
pilot light socket.

Walter Treftz (N4GL) --- penguino@atlantic.net ---

If not satisfied, return for complete refund.

## 535. Need Heathkit parts (HW-100/101, SB-101/102)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 21:42:19 UTC
From: k5dh@raytheon.com
Message-ID: <%m118.299$kY4.5774@dfw-service2.ext.raytheon.com>
Source record: 45662
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I'm looking for these Heathkit parts:
- top cover for HW-100/101 PA cage (it's not the same
as its SB-100/101/102 counterpart)
- shield cover with the little "grounding fingers"
attached to it that covers the driver and front end
coil boards, or just the fingers (I have the shield,
but all of the fingers are missing from it)
- SB-101/102 sidetone volume adjust pot (found on the
audio amplifier PC board)
- 400 Hz CW filter (if I can get one cheap)

## 536. Hallicrafters SX28A and R12 Bass Reflex speaker...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 22:19:56 UTC
From: nc183d@aol.com
Message-ID: <20020115171956.13601.00002772@mb-fo.aol.com>
Source record: 45663

Hi All,

After a few years of inactivity, the SX28A is active again. It works well on all bands, praticularly AM and 47 meters.

If you want to really hear one of these things the way they were supposed to sound, find an R12 Bass-Reflex speaker. The one in the photo I have is stained to look like it is Mahogany and came from the factory that way. It was never painted as I have seen them in Grey. The sound is.. (to use the old saw..) AWESOME. This one came from a used furniture store in North Jersey. I acutally walked past it twice and passed up on it for a day before I called them back and bought it over the phone.

If you want to know what it cost, I will send it with the photo. Please respond directly to me and I will send you a virus-free picture of the SX28A running with the R12 booming.....

rgds,
Mark S.

## 537. B&W5100 Dial

Yeah, and your deletion of Rob Filby's info is pretty shameful. I followed your site since its inception, learned a lot about Racal, for sure--and much appreciated. But your misunderstanding of what Rob said to John Wilson of SWM re Wilson's review of the RA17 etc., is beyond me. Rob said nothing disparaging about your site, or you. Perhaps you can tell us all here why you are throwing your teddies out of your pram re this controversy? Of all people, Filby eats and breathes Racal--the education of John Wilson is ongoing re Racal valve gear, and your arbitrary action does nothing to further the research, history, or lore of Racal.
Too bad, you had a truly fine site...For a while.

## 541. Re: Help I.D. Choke

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 23:26:37 UTC
From: ehsjr@bellatlantic.net
Message-ID: <3C44BA71.F0BE42E0@bellatlantic.net>
Source record: 45668

I agree with the previous answer - it is likely a HV power supply
choke. If the leads are "fat" - say 18 gauge wire or bigger, that
also could indicate it is for a power supply.

"David W. Fleming" wrote:

## 542. Gonset GSB101 Help Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 23:51:40 UTC
From: ehsjr@bellatlantic.net
Message-ID: <3C44C047.BF5E6453@bellatlantic.net>
Source record: 45669

I found a Gonset GSB101 linear amp (80 through 10) at a junkyard, missing the tubes and the high voltage filter choke. I re-tubed it (4 811A's), converted the tube rectifiers to 2 strings of 6 1N5408's, and installed a HV choke I had on hand. I also had to re-build the meter, which was broken.

I've got it working nicely.

The schematic & manual does not give any specs for the HV choke, just a part number. Does anyone know what that amp takes for the HV choke? Or, does anyone have the choke? I'd like to use whatever was in there in the first place. I'm not 100% satisfied with the regulation I get with the choke I used. Also, while I'm asking, does anyone have the meter? My meter re-build works great, but it would be nice to have the original, unrepaired meter.

Thanks!

# 543. FS: Drake SSR-1 Shortwave Receiver, Last Call Before Ebay

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-15 23:54:11 UTC
From: Michael White <m.white66@verizon.net>

For sale, a Drake SSR-1 general coverage shortwave HF receiver. AM, USB and LSB, continuous coverage to 30 MHz, AC or internal batteries, self-contained telescoping whip. Uses the famous "Wadley Loop" system for drift-free operation. In excellent condition, a few tiny dings on top edge, a "burnish mark" on speaker grill you can only see if the light catches it, case excellent, battery compartment clean. Overall, an easy "9". See a picture of this radio at

http://members.verizon.net/~vze27dkg/ssr1.jpg

$175 plus shipping from 20164. If it doesn't sell here in the next day or so, it goes on ebay. Thanks.

I don't know what SSR-1s go for. I've been using a Yaesu FRG-7 lately,
which also has the Wadley system. It works very well - no images and
good stability. I can only imagine that the Drake realization works
even better.

I think k3ich (I may be wrong but the call is close to that) sells overlays for the B&W 5100. I bought one on e-bay some time ago, but I put it somewhere and I'm not sure where. Looking at the dial and peering in the transmitter, I'm not sure how to install the new overlay when I find it again.

I have both radios, and while each may have an edge over the other in some way, I do find the Drake SSR-1 easy and smooth to use. Like the Frog, it has good solid audio you can listen to for hours. Unlike the Frog, it has a big built-in whip antenna as well as battery compartment, making it a true "porta-top."

Note that the SSR-1 was made in Japan for Drake, and Osterman's book downrates it as not up to the usual Drake standards (well, what is, that you can lift with one hand :-) I think this radio is much nicer than Osterman lets on. Its preselector tuning knob doesn't have the pretty drum dial of the Frog -- in fact it has no calibrations whatever, just like the Racal 17 (the grandaddy of Wadley Loopers, and I have one of those too. Did I mention, I like Wadley Bloopers :-).

Both the FRG-7 and the SSR-1 lack any selectivity controls, though the default selectivity is a good compromise in both sets. The Frog does have a Sony-style tone control switch, and a local-DX attenuator switch, neither of these is in the Drake.

I haven't had my Drake apart yet to see if it's built as well as the Froggy.

All told, $175 is a good price for this set. --Mike K. AA1UK

I've owned them both at the same time. The Drake unit isn't bad, but the Frog is much better, in terms of front end intermod. The Drake unit was made in Japan. The price he is asking is pretty good.

Source record: 45686
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

We achieved 55-60dB sideband suppression using the polyphase network and a Johnson Ring counter arrangement for the RF quadrature generator up to about 10 MHz. Admittedly this was trimmed for best result and drift may have been a problem in the long term.(See Electronics and Wireless World Jan 1996) Using proper pole frequency selection you could get quite good accuracy from 100Hz to about 8 KHz and the network is quite tolerant of error (in fact I inadvertedly shorted or open circuited components on occasion without major loss of performance.)
The problems were component count and in band losses (while out of band signals were attenuated much less)

Best to stick to the JAN manual (T/O) procedure for R/R the deck and not look for easy outs or tricks (don't ask me how I know this<G>). The first time will take you awhile but it is clearly lain out enough that it is not difficult per se. Since one needs the same T/O's for proper alignment anyway (what a bear the thing is to thoroughly align<G>), one ought to have them on hand.

Perversely, the one ass'y they don't tell you how to R/R anywhere in any SP-600 manual is the dinky BFO can, and by the time you have done so when your BFO has died you'll have done more disass'y work than req'd to R/R the RF deck, what a b*tch. :-) So recap everything that's apart when you R/R subassy's on an SP-600 whether it needs them or not.

> All true. But the info I have says the R-388/51J-3 has hi-z input.

Yo Jim,

My source is my JAN TO's for the Collins version, and my set indeed behaves as if the stated Z is correct. However, an anomaly may be possible, as not all R-388's were Collins - the early s/n run was a Hallicrafters contract, though I have never personally seen one myself - is it possible that a difference may exist btw the two (or possibly from another contract revision)? What is your source for the hi-Z spec? TIA (which is not someone's name as one funny poster new to online life misunderstood) :-)

## 576. GPR-90 Price?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-16 21:43:45 UTC
From: macve3gro@aol.com
Message-ID: <20020116164345.16883.00001639@mb-fm.aol.com>
Source record: 45604

I have a friend who is thinking of selling his GPR-90 (not to me--I already have two with speakers, and even a SSB adapter!) and is wondering about fair asking price. There is one with a speaker and SSB adapter being advertised on this bulletin board for $2500. Good luck to the seller, but I'm not naive enough to believe this is a realistic asking price. The GPR-90 which might be for sale is in excellent condition and works well. Case and trim around the dials are original factory painted a light lime green--no doubt a special order. No speaker or SSB adapter. Your thoughts, past prices noted, etc. would be most welcome. Thanks es 73 to all. Harry MacLean, VE3GRO

Really nice receiver..... there was a reportedly "mint" one on "the" auction site several months ago with the original paper work and in all original condition that didn't sell during the seven day auction for a $700 buy it now price. The pics on the auction were outstanding and it really looked nice. The seller had excellent feedback and I think it was in Canada as well.

If I didn't have a rack of Racal's and an R390A to finish restoring I'd have bought it. I think $700 is a fair price, maybe a bit more.

Mike

If the minimum bid is $250, what's the REAL difference between that and a reserve price of $250.

If you have a $250 minimum bid, you can't bid less than $250, right? If you have a $250 minimum bid, you are saying you won't sell it for less than $250.

What's the difference?

>What's the difference?
>

The difference is "open-ness", some might even say 'honesty'.

When you put a 'reserve' price on an auction item, that price is a *secret*.
nobody knows _in_advance_ how much they have to bid before the bid will be
considered 'reasonable'.

Thus with a $0.01 opening bid, and a, say $1,000.00 'reserve', a _lot_ of
wasted effort bidding can go on. with no chance of a purchase. ( and yes,
people _do_ place minimums/reserves like that on eBay)

Declaring a 'rational' minimum bid, and "no reserve", says _up_front_,
"this is the minimum I'll sell this for. if it isn't worth that to you,
don't waste your time bidding".

Reserve bids are "I've got a secret; I'm not going to tell you what all
the rules are for the game you're playing -- but you're still stuck with
a binding contract". It's not int the same class as the classical "pig
in a poke", because you _do_ know what you're trying to buy. You just
don't have any idea if you're wasting your time, or not.

Personal opinion: to be fair to _all_ parties, the minimum bid should be
at least 80-85% of the reserve, if there is a reserve. This _has_ been
suggested to the powers-that-be at eBay, who have seen fit to ignore the
concept, completely.

In this situation, the seller is being entirely up-front, open, and honest,
about his pricing -- he thinks $300 is a fair price, and will sell it for
that price. And, he's willing to bet $50 of his own money that $300 _is_
a fair price. If somebody thinks the $300 is to high, they can start the
bidding at $250 -- whereupon, *IF* the final price is less than $300, the
'high bidder' comes out ahead; if not, they 'pay' for their mis-judgement.
Literally. Seems equitable to me. <grin>

>
> My source is my JAN TO's for the Collins version, and my set indeed
> behaves as if the stated Z is correct.

The article by W4MEW in Electric Radio mentions that the TM glosses over the change to hi-Z input. The TMs were done by Rider, btw.

The letter on EB5AGV's website (link posted here in previous post) confirms it.

But the most obvious check is to see how the set is wired. The "50 ohm" models have low-impedance link coupling to the first RF coil. The "hi-Z" ones have a small capacitor direct to the grid of the RF amplifier - no links.

The W4MEW article tells how to convert to "50 ohm" input by winding links and removing the coupling caps.

> However, an anomaly may be
> possible, as not all R-388's were Collins - the early s/n run was a
> Hallicrafters contract, though I have never personally seen one myself
> - is it possible that a difference may exist btw the two (or possibly
> from another contract revision)?

Now I'm confused! I thought only Collins made the 51J series (they look a bit like the 75A series receivers). Perhaps there is a situation like the SP-600/SX-73 URR/FRR thing?

> What is your source for the hi-Z
> spec?

The ER article and the link posted previously. They claim that the input was modded to hi-Z because those receivers were meant for use with a short whip antenna. IF output and mods to broaden the IF were added, too. I think the antenna trimmer may be the result of the change, too.

This was all brought about as an expedient to adapt an in-production receiver to a specific military use. The R-388s replaced BC-342s and made spotting an exact frequency MUCH easier.

The 'J4 added mechanical filters.

Of course the final authority is to simply look at a receiver to see how it's wired.

## 597. The Millist Thing...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-17 17:28:15 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3C4709AF.3294297F@ix.netcom.com>
Source record: 45624

Re:
The Millist thing.
I've copied this to the places where
I posted my original rants, because a man should
take his licks in the same forum where he dished them out.
I shouldn't have posted it in a couple of places,
but I lost my temper and did, so this has to go there, too.
A few people will complain because it's "off topic-"
They can just get over it.

I know now you were "in the middle" and were forced to act.
I'm sorry I put you there.
It didn't occur to me and it should have.
Crooked dealers are bad news, Ralph.
They've taken a lot of people.
They do it every time they surface.
Someone has to raise a flag.
I guess private word of mouth is the only way, since posting
even a generally worded warning with no names apparently
causes so much trouble.

Just for the record- there's no way some of these people
could sue and hope to win.
There's enough written records of their
crooked dealings to make any shyster lawyer run.

As for people leaving the reflector over this-
Frankly, if someone would sign off a reflector just because
they didn't like one thread, they have other issues
that involve their own attitudes.
And they certainly don't have much in the way of commitment
to the community if such small potatoes will run them off.
And let's not forget-
They chose to read the follow-up messages-
they weren't forced to do so. I've seen this before and
have no sympathy for people who stick their hand on a hot
stove, complain that it's hot, then do it again.
No- I don't feel even slightly bad that such people are gone,
but I *do* regret that I caused you trouble over it.

I do have some commitment to this community-
enough to post this and catch hell over it.
But next time, I'll try to remember that my rants
can cause "collateral damage."

73 Dave S.

# 601. FT 101E mods

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-17 19:47:39 UTC
From: Lou <tech@dp.net>
Message-ID: <a27a94$meq$1@news.dp.net>
Source record: 45628

Hello,

I have a question as was posed to me.... Though I do repairs, I'm not into mods much, though I do - do them "when needed or necessary". I was asked by a gentleman about a mod - if it exists - for an FT 101 E. Now, I've not seen the set or mod, to my recollection. Nor do I have any technical info here on the set in question to fall back on to even attempt an answer - even to recall what type of finals he said it now uses. So, being I couldn't offer the gentleman any answers, I did offer to help find an answer whatever it may be.

The question as was posed to me: Can an FT101-E be converted to use 6146s in the transmitter. If so, how? Where can the information to do such a conversion be acquired. I will pass the information along to him.

I'm sure he would appreciate the help as would I.... Who says you can't teach and old dog new tricks? Once the question is answered, I'll know too!

Thanks in advance for the help - whatever direction it takes.

I think it's someone's aunt, but only south of the border :-)

Seriously, I will now go check out my R388. I have never been impressed with its sensitivity, and if it's a hi-Z input, it should work better with a random hank of wire strung across the room than on my Fritzel dipole with coax feed!

And I always felt its selectivity was too broad -- maybe I'll hunt down and kill those caps in the IF cans. Tnx es 73, Mike K. AA1UK

Oscar loves trash, but hates Spam! Delete him to reply to me.

## 611. Anyone want a boxful of mil connectors, yours for shipping costs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-18 02:54:46 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3C478E76.9C45E501@ix.netcom.com>
Source record: 45638

I found a box of around 50 to a hundred mil type connectors.
Some made by amphenol. A sampling of part numbers:
20-16pf, 20-1, 18-12pf, cannon 20-19, amphenol 20-7,
bendix 18-1, cannon 18-22, amphenol 22-10s
Some 3 pinners, small.

Some have their mates. All appear to be used, some
quite obviously as they have a few inches of wire still
soldered on.

All appear to be in good enough condition to be useable,
unless you are NASA needing to work on the shuttle.

There's about 20 to 30 pounds of connectors in the box.
I want to get rid of 'em all, so you gotta take the whole enchilada.
Yours for free plus the cost of shipping from NJ USA.

# 612. FS: Surplus Radio Conversion Manual, Vol. I

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-18 03:42:26 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3C478DA2.6AC6ADD@teleport.com>
Source record: 45639
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

FS: Surplus Radio Conversion Manual, Vol. I, third edition. Covers the conversion of mostly WW II equipment to the ham bands. Units covered in this volume I:

BC-221 Freq. Meter
BC-342 Receiver
BC-312 Receiver
BC-348 Receiver
BC-412 Radar Oscilloscope
BC-645 Transmitter/Receiver
BC-946 Receiver
SCR-274 (ARC-5) 453A-Series Receivers
SCR-274 (ARC-5) 457A- Series Transmitters
SCR-522 Transmitter/Receiver
TBY Transceiver
PE-103A Dynamotor
BC-1068A/1161A Receiver
Other Misc. Surplus info

$20 plus postage.

Source record: 45642

Late last week a gentleman named "Tim" (amphone@concentric.net) posted an ad for the sale of a Hallicrafters SX-115. I communicated with him, met his price, and was arranging shipping/pickup. Suddenly Tim said he had to "slow down" regarding the sale, quit communicating, and now is an "unknown user" on concentric.net. Tim claimed to be located in Saginaw, Michigan.

Does anyone know of this individual? Was this an attempted ripoff? It sure has the feeling of a typical ebay-type scam at this point. Thank heavens I didn't send a bank check given the present situation.

Anyone with any information?

Thanks much.

Myself and another Ham purchased two supposedly working PRC-70 radios from a Mike Linger at this email address. Both radios were burned up and could never have worked as stated. After Mr. Linger agreed to pay for half the repair (over $360) it took nearly a year to get only $50 from him. I have a long record of correspondence if anyone has any questions. I would also like to hear from other Hams who have had similar problems with Mr. Linger. Buyer beware!

Source record: 45547

Yes, no harm done.

But you must wonder, especially with the change in the user name to avoid the communication whether the original intent was honorable; If not, there could have been a change in heart, and there could have been a change in the estimated probability of getting away with it based on the pesonality /sophistication of the person on the other end of the line.

Can't be sure, can we.

# 621. TMC GPE-1A Exciter manual PLEASE!!

Source record: 45548

Howdy folks;

I have two of these that I've been desperately trying to locate a manual for. Believe it or not, it's been about two years now and I've still come up empty handed. My intention is to restore the exciters and put them on the air.

Someone (bmiller@calweb.com) had one advertised for sale a few years back with a manual. I attempted to contact him but the E-mail address is no longer valid.

If you have or know where I might find a manual for the TMC GPE-1A Exciter I'd really appreciate some help....

Thank you very much

Hi Mike,

I'm also looking for some HW-101 parts, in case you locate a
whole parts rig, or someone parting one out. I need the top
cover for the PA cage, and the "fingers" that are attached to
coil compartment shield cover on the bottom of the rig.

Someone emailed me the other day and is selling me a CW filter
for $10.00, shipped! Too cool.

You can get drive belts at auto parts or hardware stores.
Use neoprene O-rings. You need 2-3/16" diameter, but make
sure to get new ones that are at least the same thickness
as the old ones. The skinny ones that I found at Lowe's and
Home Depot are too thin and don't work at all.

In lieu of rubber belts, a lot of guys have installed dial
cord. It's a lot of work, but a lot more dependable.

73,
Dean, K5DH

If it was a scam , the first defence you had was offerring to pick-up the item. This will slow down a scammer very quickly. What they want is funds sent with a promise to ship. If the individual is legit, he should not have exhibited all the signs of a scam-artist.
It seems it may have been a questionable deal.
The first thing to do is get solid identification and then be able to confirm it through an independent source such as a callbook listing with correct address AND also any other customers refeernces for the same individaul.
Alwayss "ASK FOR REFERENCES" Just how they answer this question can be very informative. It never hurts to remain skeptical but keep open minded.
Good luck and happy trading!

Hey Guys,

Upon looking at E-Bay last night, seen a few on there. Whole and for parts. They were/are nice rigs. I had one. Sold it to my brother when I got a TS 440.
After looking at them last night, was half tempted to ask my brother to sell his back to me, or bid on one of those on E-Bay. I worked more of the world on the 101 than I did on the TS 440. Loved that rig.....

Just thought I would try to help you guys out a bit.

AMATEUR RADIO NEWSLINE(tm) REPORT #1275 - January 18 2002

Amateur Radio Newsline report number 1275 with a release date of
Friday, January 18th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new ham antenna on the I-S-S and a new microwave record down-under are first on Amateur Radio Newsline report number 1275 coming your way right now!

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NEW ANTENNAS INSTALLED ON THE ISS

An American astronaut and a Russian cosmonaut ventured into space on Monday January 14th to move a construction crane and install a new set of ham radio antennas on the International Space Station. Roy Neal, K6DUE, has the details.

--

THERE IT WAS, ON NASA TELEVISION, TWO WHITE SPACE SUITED CHARACTERS, DWARFED BY THE IMMENSITY OF THE INTERNATIONAL SPACE STATION. FOR THE 32ND TIME ASTRONAUTS AND COSMONAUTS WERE OUTSIDE THE HUGE SPACECRAFT TO ASSEMBLE HARDWARE.

THEIR PRIMARY OBJECTIVE WAS TO MOVE A BIG CARGO CRANE FROM ITS TEMPORARY BERTH ON THE UNITED STATES SIDE OF THE ORBITING OUTPOST TO A PERMANENT LOCATION OUTSIDE THE DOCKING COMPARTMENT OF THE RUSSIAN CONTROL MODULE.

THAT ACCOMPLISHED, THEY WENT ON TO UNFURL A HAM RADIO ANTENNA. ASTRONAUT CARL WALTZ, KC5TIE AND COSMONAUT YURI ONUFRIENKO, RK3DUO, DEPLOYED THE RIBBON OF TAPE THAT SOON WILL BE IN USE ON A HAM RADIO STATION IN THE SERVICE MODULE,. WHERE THE CREWS LIVE AND SLEEP. A SECOND STATION HAS BEEN IN SERVICE FOR SOME TIME INSIDE THE SO CALLED FUNCTIONAL CARGO BLOCK, ANOTHER SECTION OF THE I S S.

FRANK BAUER, KA3HDO, THE CHAIRMAN OF ARISS, THE GROUP THAT IS RESPONSIBLE FOR AMATEUR RADIO ON THE SPACE STATION, CONGRATULATED THE INTERNATIONAL TEAM OF LICENSED HAMS FOR THE SUCCESSFUL CONCLUSION TO MONTHS OF HARD WORK.

ON JANUARY 25th ONUFRIENKO IS SCHEDULED TO GO OUTSIDE AGAIN, WITH FLIGHT ENGINEER DAN BURSCH, KD5PNU, TO INSTALL 3 MORE HAM RADIO ANTENNAS OUTSIDE THE MODULE THEY CALL ZVEZDA, THE CREW COMPARTMENT THAT'S THE SIZE OF A PASSENGER BUS HERE ON EARTH.

HAM RADIO IS GROWING RAPIDLY IN SPACE, ALONG WITH THE INTERNATIONAL STATION ON WHICH IT'S INSTALLED.

FOR THE AMATEUR RADIO NEWSLINE, ROY NEAL, K6DUE

--

The Expedition 4 crew will remain on board the ISS until May. And according to Frank Bauer, KA3HDO, another important task is to bring the automatic packet system back on line. He says that ground technicians are working with the astronauts and cosmonaut on that project and that task will continue as crew time permits. (ARNewsline from information provided by ARISS, NASA.)

**

HAM RADIO RECORDS: 24 GHZ DOWN-UNDER

A new distance record is set on a band where even commercial interests are only now starting to tread. And its a group of Australian hams who have set it. Q-News Graham Kemp, VK4BB, has the details:

--

A new Queensland distance record on 24.048.1 GHz USB was established morning of Tuesday 08 January over a 72.8 Km path. Location 1 was at Wellington Point, with VK3ZQB and VK4ZHL portable. Location 2 was at Caloundra, with VK3XPD and VK5DK portable operating.

Signals strengths up to 5x5 after initial optimization with typical daytime QSB. The visiting team are continuing with local propagation experiments. The challenges of building and operating microwave amateur radio equipment are wonderfully rewarding in many ways!

From Q-News Australia, I’m Graham Kemp, VK4BB, for the Amateur Radio Newsline.

--

Further experimentation is expected to bring even more record setting contacts in this very microwave ham radio band. (Q-News)

RESTRUCTURING: BIG LICENSING SUCCESS IN THE UK

A new slow-code license recently introduced in the United Kingdom is also setting records. This in the area of people flocking to get it. Jeramy Boot, G4NJH, days that the new British Foundation License is on its way to becoming a major success:

--

The Radio Licensing Center reports that, as of the 7th of January, exactly 600 of the new M3 Foundation Licenses had been issued.

In the 'QSO Party' for Foundation Licensees that took place on the 1st of January it is estimated that about 100 M3 stations were active. Many joined the one-minute-past-midnight 80-meter net and many more were heard working DX during the subsequent days.

One person active on the 1st of January was Mike Marsden, M3BQH, who also holds the callsign G8BQH. Mike reports that he worked Alex, UR5EDU, in the Ukraine at

two seconds past midnight, using 10 watts on 40 meters. The report was 59+10dB. After a few hours' sleep M3BQH worked 66 stations on the first day, with only two short CQ calls.

"The pile-up queue was never ending, I even managed to work seven other M3s", Mike said.

Jeramy Boot, G4NJH

--

To put this in perspective. The UK has 57,814 hams so 600 is about 1%. Here in the United States we have close to 625,000 licensees. That’s the equivalent of getting 6250 hams signing up for a new license class here in the USA in only a few short days. (GB2RS)

RADIO REGULATIONS: FCC'S APPROVES DRAFT WRC PROPOSALS

The FCC’s Advisory Committee for the year 2003 World Radiocommunications Conference has approved its preliminary draft proposals. The document has been assigned as D-A-02-101 and deals mainly with satellite and terrestrial allocations in the UHF and microwave bands. Amateur Radio is only briefly mentioned in the area of 890 to 1350 MHz allocations.

The Advisory Committee itself was formed in January of 2001 to assist in the development of United States proposals for WRC 2003. DA-02-101 is based primarily on the committee report. Comments on it are due on it no later than January 28th.

The complete of 55 page text of DA-02-101 is on the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-02-101A1.txt (FCC)

**

ENFORCEMENT: CLEAN UP THE INTERFERENCE - PLEASE

The FCC has written to an A-M radio station and an electric power provider to help resolve an unusual and long-standing interference situation. One affecting local amateurs in the Cincinnati and Mason Ohio areas. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, brings us up to date:

--

The letter suggests that multiple sources may be involved in this interference case. Also that two that are possibilities are Cinergy Corporation and radio station WLW. Cinergy is the electric company to the affected area and WLW is a Clear Channel Communications owned power-house AM station serving the greater Cincinnati area from a transmitter in Mason.

WLW operates on 700 kHz with 50,000 Watts into a single element diamond shaped half-wave vertical tower. This is only one of two such towers left in the United States, the other belonging to WSM AM in Nashville Tennessee. Both were constructed in the early 1930's by the now defunct Blaw Knox Construction Corporation.

One of the amateurs affected is Bob Reiff, WA8ULW, of Mason. Reiff told the ARRL Letter that while the noise is most noticeable on 160 meters, it's showing up elsewhere. He says that some local hams suspect it is even causing problems even on a two meter repeater.

In its letters, the Commission says that it recognizes this to be an unusual case. It says that the source of the interference could turn out to be something else unexpected. But the Commission adds that it is turning to the radio station and electric utility company and asking for their help in finding the source of the noise plaguing the Mason ham community. It's also asking that both cooperate with the technical experts from the American Radio Relay League in solving the problem.

For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA.

--

By the way, More information on this very interesting Blaw Knox diamond tower design and the ones installed at both WLW and WSM is available on-line. Simply take your browser to http://www.wsmonline.com/w_homepage/tower/index.html. Its very interesting reading. (FCC, ARRL, Amateur News Weekly)

**

ENFORCEMENT: UNLICENSED OPERATOR TOLD TO EXPLAIN

A former ham that the FCC says may have been on the air without a license has been asked by the agency to provide an explanation. The person posing the questions is FCC chief ham radio rules enforcer Riley Hollingsworth, K4ZDH. And in a recent Rain Enforcement log, Hollingsworth outlined the situation:

--
Hollingsworth: "We requested clarifying information from Brian Bailey, ex-KD5PXQ. His license was set aside by the Wireless Bureau on October 19th. We want to know his exact whereabouts on two specific days in September. Bailey has been in touch with us and is deciding weather to provide the information."
--

According to Hollingsworth, the information that the FCC wants from Bailey relates to allegations of unlicensed operations and malicious interference. (FCC, RAIN)

CONVENTIONS: HAMVENTION SAYS BRING YOUR BUS AND LAVE THE PARKING SPOT TO US

Free parking at the HARA Arena for Hamvention? Well, kind of. Its free if you leave your car at home and charter a bus to bring in a pretty large group of people to the event. Amateur News Weekly's Phil Thomas, W8RMJ has the not so complex details:

--

For Amateurs who charter a bust to make the annual journey to Hamvention, the Dayton Hamvention Committee will reserve a parking place for your chartered bus for the entire three days of Hamvention. The reserved parking will be close to the HARA Arena Complex, allowing not only a place to secure your valued purchases, but also a place to rest those weary feet after walking many, many miles of Hamvention. Space is limited for the new charter bus parking area. Pre registration is required. Availability is on a first come, first served basis.

--

For more information on the new on-site charter bus parking offer or to reserve a space, please contact the Dayton Hamvention office. It's open normal business hours Eastern Standard Time at are code (937) 276-6930. You can also fax your request toll free at
1-800-491-4267. (Amateur News Weekly)

**

CONFERENCES: SE VHF SOCIETY IN APRIL

Greg Robinson KB4NVD says over the VHF Reflector that the Sixth Annual Southeastern VHF Society Conference will take place April 26th through the 27 Th. in Oak Ridge, Tennessee. The conference, hosted by the Southeastern VHF Society, promises to be an interesting and exciting event with presentations from accomplished VHF and up amateur radio enthusiasts from several parts of the country. Registration, program details, hotel and travel information can be found in cyberspace at www.svhfs.org. (SE VHF Society)

**

HAM RADIO EVENTS: KIDS DAY A BIG MID-WEST SUCCESS

The first Kids Day operating event for 2002 was a rousing success in many venues. But in one Mid-West city a bit of coverage on a local T-V station helped to make it even better. Again to Amateur News Weekly and reporter Jack Parker, W8ISH:

--

Kids Day at the Indianapolis Chapter of the American Red Cross got a boost when event coordinator Stece Wendt, KB9RDS, made an appearance on a local TV news program. During the two minute segment. Wendt told viewers that all kids and their parents were welcome to share in the Amateur Radio experience, including an introduction to Morse Code, VHF repeaters and HF:

--
Wendt: “And then we turn around tand take them over to the big radios -- the big base station radios where they can talk -- literally -- around the world.”
--

This is the second year the local Red Cross chapter has shown young people how to tune in the world.

Reporting from Indianapolis Indians for Amateur News Weekly, This is Jack Parker, W8ISH.

--

This is just one of many Kids Day success stories. We will have more in future Amateur Radio Newsline reports. (Amateur News Weekly)

ARNEWSLINE(tm) FINANCIAL UPDATE WITH N6TCQ

It’s time for a report on the financial situation here at Amateur Radio Newsline. With it is our Support Fund Administrator and Corporate Treasurer, Andy Jarema, N6TCQ:

--

It is January of 2002. A brand new year for ham radio. And the beginning of another year for us here at the Amateur Radio Newsline. And as we start off the new year, here are the current finances.

Looking in the new corporate checkbook, the balance shows us at about $700 give or take a few bucks. Not very much when you consider that it takes over a thousand dollars a month to produce these weekly 20 minute Q-S-T’s.

Obviously, Amateur Radio Newsline is going to need your help -- and -- need it quickly to keep it from going away and to keep the news of ham radio coming your way.

We have done all that is possible from our side to keep costs under control. But, some fixed expenses like the telephone and long distance calling are a must have. So are electronic mail and world wide web access. There is the cost of the routine maintenance on the tape machines and editing gear. And in a few months the Newsline sponsored Young Ham of the Year Award will be rolling our way. All of this adds up and some costs just keep going up. When you add it all up and average it out, it comes to that $1000 a month figure I just mentioned.

So now is the time when Amateur Radio Newsline has to ask to ask that you help to keep its newscasts coming your way. Your tax deductible contributions can be sent to the Newsline Support Fund, Post Office Box 660937, Arcadia California. The Zipcode is 91066.

Ill be back within the next few weeks with an update on how things are going. For now from the Amateur Radio Newsline support center, I'm Andy Jarema, N6-Tiny-California-Quake.

--

Don't worry if you missed the address. It will be repeated in a few minutes at the end of this weeks newscast. (ARNewsline(tm) Support Fund)

**

ARNEWSLINE(tm): WE ARE GOING MP3

One other piece of news concerning Amateur Radio Newsline. As of March 1st, we will be dropping Real Audio and going exclusively MP3. Why the change? Well ever since we began posting a downloadable MP3 file at our own FTP site along side the Real Audio file, 9 out of 10 people have chosen the MP3. And with good reason. MP3 simply sounds a lot better than Real Audio to most of you. And by dropping the Real Audio, we can make the MP3 sound even better by encoding at a higher bit rate.

Right now, you can still compare the two formats if you like. Until February 22nd we will continue to post both Real Audio and MP3. Take the time to download both. And don't worry. Most modern media players including Real Audio, Microsoft Media and Winamp play MP3 so the chances are that you are already equipped to cover of the digital format change. (ARNewsline(tm))

**

SCIENCE AND TECHNOLOGY: THE NOISE OF EARTH

According to Space Daily, researchers have known for three decades that the Earth is a potent radio transmitter, but they were never able to pinpoint where the noise was coming from. Recently, by using data from the four spacecraft of the European Space Agency's Cluster mission, NASA-funded scientists have precisely located the source of the radio noise along the magnetic field lines. The noise originates several thousand miles above bright regions in the Earth's
northern lights. (AMSAT, Space Daily)

**

INTERNATIONAL-CANADA: ARE AGREEMENT IN B.C.

Turning to international news, Radio Amateurs of Canada which sponsors that nation’s Amateur Radio Emergency Service has signed a Letter Of Understanding and the British Columbia Provincial Emergency Radio Communication Service. The letter represents the collaboration between Radio Amateurs of Canada’s British Columbia Section Manager Fred Orsetti VE7IO and Supervisor of Information and Communications Technology for the Provincial Emergency Program Andrew Bryan VE7KSN, to provide a cooperative plan to carry out emergency communication. The letter also further enhances the work of the Canadian ARES program and compliments the Memorandum of Understanding signed May of 1994 between Radio Amateurs of Canada and Red Cross. (RAC)

**

INTERNATIONAL - CANADA: VE1AWA RESIGNS AS MARITIME PROVENCES SM

Due to personal reason Roy MacIntosh, VE1AWA has stepped down from the position of Section Manager for the Maritimes. Tom Caithness, VE1GTC has been appointed acting Section Manager pending outcome of the upcoming election call. (RAC)

**

INTERNATIONAL - UK: AMSAT-UK COLLOQUIUM

The 17th AMSAT-UK Colloquium will be held at Surrey University in Guildford from the 26th to 28th of July this year. AMSAT-UK is now inviting speakers to submit papers about amateur radio space and associated activities for this event and for the Proceedings document. Offers of papers should be submitted as soon as possible and should be sent only to Richard Limebear, G3RWL. His e-mail goes to g3rwl@amsat.org. (AMSAT-UK)

**

HAM RADIO IN SPACE: WEBSITE UPDATE

AMSAT reports that IK8XLD has updated his website with information about satellite operations, EME, the ham radio operation on the International Space Station, ATV and homebrew equipment. You can visit Rocco’s website at www.qsl.net/ik8xld. (ANS)

**

DX

In DX, DJ4KW and DK9GG are active from Belize as V31YN and V31GW respectively until about the 2nd of February. Activity is on CW, RTTY and PSK 31. (GB2RS)

And KE1F will be active on 10 to 160 meters CW, SSB and perhaps RTTY as ZF2LM from Grand Cayman Island from the 14th to 30th of January. (GB2RS)

Also R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28 MHz with 100 watts to an R6000 vertical. For all three, QSL as directed on the air. (OPDX)

Last but by no means least, word that JX7DFA, is on a job assignment to Jan Mayen. He is operating as LA7DFA. QSL via his home call. He will reply when he returns home in the Spring. (Modern DX)

**

THAT FINAL ITEM: A CALL FOR ARDF HUNTERS FOR THE WORLD GAMES

And finally this week, 2002 may be the biggest year yet for fans of hidden transmitter hunts, especially the ones that are all on foot. Amateur Radio Newsline’s Joe Moell K0OV helps coordinate happenings like these and has news of two major events.
--

Every two years, hams from around the world gather to see who is best at on-foot hidden transmitter hunting, also called foxtailing, radio-orienteering and ARDF. There are separate events on eighty meters and two meters, each with five transmitters scattered in a forest that can encompass 1000 acres or more.

Competitors are divided into five categories for males and four categories for females. Each country may have up to three persons per category on its team.

Back in Y2K, the championships were in China, with a dozen stateside hams among the competitors from 26 countries. This year, the excitement moves to Slovakia and takes place from September 2 through 7. Once again, ARDF Team USA will be there.

Would you like to be on that team? If so, contact me right away, because USA must submit its Letter of Intent to the Slovakian hosts by the end of January.

Of course you'll need lots of practice beforehand, and you can get plenty by attending USA's own national ARDF championships, which will be April 19-21 in Pine Mountain, Georgia, near Atlanta.

Find out about both championships -- Slovakia and Pine Mountain -- by visiting my Web site: www.homingin.com. Homingin is one word. Then apply for the Team USA roster at my e-mail address on that site, or by postal mail to my callbook address.

Maybe you'll bring home a medal this year. From southern California, where this year's local radio-orienteering training sessions will begin soon, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline.

--

In case you missed it, Joe’s website is www.homingin.com. “homeingin” is one word. (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More

information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating season for the Dayton Hamvention Radio Amateur of the Year, Technical Achievement and Special Achievement Awards closes January 31st. Nominations should be sent to Post Office Box 964 Dayton Ohio 45401. They can also be filed using the e-form at the Hamvention website. Its at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm _____ saying welcome to the year 2002, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

Thanks and regards;
Neil

# 637. Kenwood TS 520 Troubleshooting HELP

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-18 21:39:52 UTC
From: clannan@hotmail.com
Message-ID: <24958b5c.0201181339.29fdf103@posting.google.com>
Source record: 45564

TS 520
Radio seems to work ok except 1 of 3 of the 10 meter bands, 28.0 will not funtion.I can get a 60 ma reading on IP (USB or LSB) when in transmit mode but that is all it will
do, no ALC or or other output readings on the radio or SWR meter no matter what.
There is no recieve at all on 28.0 except at about 28.375 the is a faint carrier and if I flip the band switch to 29.1 (the 3rd 10 meter band) without ajusting the VFO the same carrier is there but much stronger.

I have had the radio ajusted to the manual specs and all seems to tune just fine, as the manual says. 10 meter is tuned with the band sellector in the 28.5 position.
Another thing, the radio has a tone just like the 25hz tuning tone throughout the radio on all the bands (except 28.0), sometimes without moving the VFO you can switch the bands and the tone will be uniform across them all. For the band problem, I suspect the 28.0 crystal (36.895 ?) but this is my first HF rig, I just bought it off Ebay as a working radio, I guess that means the lights come on.....This is the only band I can use as a tech and as my luck would have it, its the only one that does not work.

Any help would be great from the Ham communitee.

Thanks in advance and 73's

Chris Lannan, N1IPO

Yup. I would suspect the crystal or supporting circuitry. Just unplug the second 28 MHz crystal and plug it into the first slot, then check the rig. If it works, then its the crystal. If not, check the circuitry supporting that crystal including the band selector switch.

Source record: 45573

Hi Mike,
This is the original post for the bad radios we got with the contact #:

FS: I have 2 (qty) RT-1133/PRC-70 manpack tranceivers for sale. Their
frequency coverage is 2-80 mhz (continuous) in range and are AM, FM,
SSB,
and CW mode capable. I have a handset for each unit. They are in very
clean condition with a 9+ original paint. Units have been on the air
with
good signal reports. I want $1200 each. If interested call Mike at
(979)
693-1461 or e-mail to: gspubl@tca.net

I think he is in College Station. You are probably ahead of the game since your radios were advertised as broken. The ad for the radios we got stated "9+ original paint". Most of the one I got had been sprayed over with OD green duck blind paint. It was one of the worst looking 70's I have seen and I have seen quite a few. Mr. Linger did offer to take them back originally but after the long wait getting them and especially after he agreed in writing to pay for half the $360 something repair bill, I really wanted to get it working. He also offered to have his so called technician fix them but this is the same guy who supposedly bench checked them before we got um. We sent them to the only guy in the business who specializes in PRC-70's and then had Mr. Linger take a few cheap shots at him when more radio problems showed up later. I wish you good luck in your endeavor.
Mike

## 646. Ham Radio University 2002 for Long Island

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-19 01:55:13 UTC

Ham Radio University 2002/ARRL New York City-Long Island Section Convention

North Babylon, New York - On Sunday, January 20, 2002 at 8AM, the doors of the Babylon Town Hall Annex on Phelps Lane will open for the third annual Ham Radio University. Ham Radio University 2002 is a day of education about Amateur Radio.

This year the forums have been expanded and new forums have been added. There will be twenty, one-hour presentations with special forums geared to the non-ham as well as the experienced ham radio operator. The focus will be "hands on" with many demonstrations.

Come join us at the Babylon Town Hall Annex, Phelps Lane, North Babylon, Long Island, and learn about everything from satellite communications, low power operating using radios as small as a tuna tin, how to put up an emergency antenna, the latest information on advanced digital communications, finding and fixing radio frequency interference problems to purchasing your first station equipment or handi-talkie and a special "Ask the Experts" forum. There will also be a Special Event Station W2V set up and operational on HF. There will live SSTV pictures uploaded to the NLI WWW during the event.

TALK-IN W2GSB/r 146.685 -600 110.9 PL

HRU 2002 is sponsored by the Great South Bay ARC and is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. Besides the forums, there will be tables set up with information about the different groups, ham radio classes, exam session schedules, public service and other activities.

Join us for a day of fun and education for the whole family!
Admission is open to all - donation is $2 per person.
(complimentary refreshments available)

For more information contact:
Phil Lewis N2MUN, Chairman, n2mun@arrl.net or call 631-226-0698
George Tranos N2GA, ARRL NLI Section Manager, n2ga@arrl.org or call 631-286-7562

I have a friend who has worked on some. He told me that most of the
problems are related to dirty transistor sockets. He says cleaning the
transistor leads so they make good contact should make a difference.

Actually, Now that I think of it, that likely isnt the problem, as I
have an old junker of one thats full of dirt and is a mess (but always
worked fine).. this one is like new condition everything sparkles. No
oxidation or anything. Must be a cap.

Chris, no doubt about it that 10 mtr xtal is a good suspect ,you could switch 10 mtr xtal 1 with xtal 2 and prove that. someone might have put in a CB xtal and later changed it back,might have messed it up, look for bad solder ,check band switch .it`s possible that Kenwood might have a new one. or look for someone parting out a 520 radio ..good luck.. # 660. Info/Manual - Control Products GMS 403

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-19 11:31:41 UTC
From: John Perkins <jperkins@NoSpam.accesswave.ca>
Message-ID: <yOc28.96151$Z2.1365301@nnrp1.uunet.ca>
Source record: 45586

I've recently acquired one of these elderly NiCd charger/"conditioners". It looks like an early implementation of burp charging.

The previous owner didn't have a lot of documentation with it ... a few brochure type handouts describing, rather vaguely, the box's capabilities.

The operator can select one of three charge/capacity settings from the front panel. Each of these is, in turn, established by a resistor combo mounted in an 8 pin DIP header inserted through a hatch in the bottom cover. I think I've figured out how the values for the voltage and current resistors are derived; but would very much like to confirm my reverse engineering.

Anyone out there have experience with one of these, or better still, have a manual that could be acquired or photocopied?

Thanks.

John

## 661. Need help with AN/PRM-10 Grid-Dip

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-19 11:54:17 UTC
From: radiotubes@fast.net
Message-ID: <20d99877.0201190354.5a26e4e3@posting.google.com>
Source record: 45587

I have military AN/PRM-10 grid-dip meter with a complete set of coils that cover 2 to 400 MHz range. Each coil assembly contains also several resistors that seem to control the oscillator tube bias and meter sensitivity. I would like to make additional coils for ranges below 2 MHz, perhaps 1 to 2.2 MHz, 0.45 to 1 MHz, or even 220 to 450 kHz. I wonder if (1) those ranges are possible at all for the variable capacitor used, (2) if anyone has tried to make such coils, and (3) what the values of resistors in coil assemblies would be or what would be th best procedure to determine them.. Any help will be appreciated. Thanks.

Bill,

But of course ... but in DSP, they can be very nearly
ideal, with the result that out of channel emissions
can be VERY low because of what I said about the
undesired sideband and the desired occupying the
same frequencies centered about the (suppressed)
carrier, which is at channel center.

It is also clearly a question of spectral efficiency ... while "hi-fi"
audio might sound a bit better, it does occupy more bandwidth.
I think we need to consider the tradeoff of "communications
quality" audio vs. spectral occupancy (remember, the wider the
audio bw, the further out the IM products will extend as well ...)

> Also most SSB rigs suffer some of the same problems. Especially

I don't disagree with this ... but, as Gary has pointed out, that
is not really a problem with modern DSP-based approaches.

> This so called "communications quality audio that most rigs have is

I find that most of the signals I hear are "acceptable" in
audio quality for the purpose of communication ... while

I also have to admit that you're correct that there are SOME
which are so distorted (over-driven/over-processed, etc.)
that they are hard to understand and unpleasant to listen to.

Your comment about having better sounding signals and still
being spectrally efficent is noted ...

73,
Carl - wa6vse

I would agree with Gary's statement as being fundamentally
true, but would counter with the following points:
1) the I/Q LO(s) can be easily generated in dedicated
hardware using NCO technology with virtually perfect
phase and amplitude relationships
2) the filtering requirement is for 2 identical FIR filters
3) thus, one can make a tradeoff between dedicated
digital hardware and programable DSP
4) finally, CPU cycles are ever-becoming cheaper
and cheaper, rendering the issue of computational
complexity increasingly moot in terms of cost impact.

Have the rarest rig on your block. This is one of Yaesu's earliest VFO
controlled HF transmitters, circa 1965.
It is built like a tank and covers 80-10m ssb/cw using a 6dq5 final.
The rig is in nice shape, no mods, and seems to work
in both cw and ssb modes, it is however unrestored. I would prefer to
trade for Collins gear but I might sell it. 73 George

>Mr. Linger did offer to take them back originally<

But rather than follow through with what was right originally and (by
your own admission) offered you in good faith, you let your own greed
convince you to compromise your own deal and to alter its terms, drag
a third party into it as well, and now you muck the guy over in public
for your own foolishness when it didn't turn out as you had hoped, as
multiple responses to a simple FS post that has nothing to do with
your equipment or problem.

## 677. Re: Disappearing Seller?

Ahh yes, Maria Tia - the sexy cha-cha partner that distracts me from going through my OWN 388 the way I should. But now I am getting discouraged, since everytime I think I might own some great old rcvr that is a definite known entity, I later learn that there were 71 documented & 49 undocumented versions of it and that all the T/O's known to man are wrong. :-) Maybe this was our way of confusing the enemy...

As for the Halli assertion, no, it doesn't *appear* to be like the R/274FRR situation (but WTF do I know<G>?). I will see if I can dig it out again & post it.

## 681. Re: Disappearing Seller?

I don't think that anybody is worried about his motives so much as why did he choose to change his identification for the group. Is he trying to hide something? There's enough scamming on the internet these days and guys who pull this kind of crap, that is offer expensive gear for sale and then change his identity, draws themselves open to suspect.

I've done some research on the guy and he appears to be legitimate, beside trying to hide his true identity. It appears that he acquired this radio about two years ago and tried unsuccessfully to sell it about a year ago. He had the GPR90 up for sale last year for $1800 and didn't sell that either.

He also posted several nasty type notes about how people shouldn't try to gouge people with unreasonable prices and about how Ebay was bad. I guess it sort of depends whether you're the buyer or the seller that his moral objections apply. $2500 for a GPR90 and SSB adapter is a lot like unreasonable gouging to my thinking!

The guy is really Tim Metro WB8UHZ and he does live in Saginaw. He has gone by the identity of amfone and now john smith. Happy birthday Tim, he'll be 50 in a few days. His phone is either unlisted or he has a cell phone because he doesn't appear in any of the directories. After doing some leg work he appears to be legit and is probably a nice guy. He apparently doesn't think that being upfront is the best policy when offering thousands of dollars of ham gear for sale. Some may disagree.

Just thought that you'd like to know the rest of the story!

You might have problems with the crystal Perhaps it even got damaged
during shipping.
I may well be parting out an old ts820 in the future..it has
(probably) the same type of xtals as the 520..check with me again
in a few weeks. Ive got 2 820s on the bench and im making one good
working unit out of 2 that were problem cases. (1 had no pwer
xformer). Just got an Atlas 210X up and running. It had alot of bad
connections (oxidation)..I cleaned up the connections on the rig and
then had 1 pot to adjust and it works great now..73 Earl VE3AB

> But rather than follow through with what was right originally and (by
> your own admission) offered you in good faith,

I note that you do not dispute the facts as Mike presented them.
Under that assumption - that the events transpired as Mike stated -
your criticism is way out of line :

What good faith? The seller claimed the things were in good
working condition with 9+ paint. Both claims were lies. So
now he wants Mike to send the radios back for a refund.
Yeah, right. Man, you really need to get a clue.

> you let your own greed
> convince you to compromise your own deal and to alter its terms,

Alter its terms? The terms were never met. The deal was compromised
by the seller. The seller stated "They are in very clean condition with a
9+ original paint. Units have been on the air with good signal reports. "
Mike said they had lousy paint and were burned up. It is
not Mike who compromised the deal - he's apparently trying
to salvage whatever he can.

If you have something to say in support of the seller, present the facts.
If you don't believe Mike's version of the facts, then say so. In the
absence of either of those, your criticism is way out of line and makes
you look stupid.

I have no knowledge of the deal, one way or the other, except
the version Mike posted. I'm reacting only to your assumption,
and not either supporting or challenging Mike's version. But I
am challenging your criticism as baseless, illogical and way out
of line.

If I remember correctly the 2nd harmonic products of the wanted side band show up as unwanted side band products in the unwanted side band and because they occupy the same spectrum they show up and interfere with the wanted side band.

# 700. Re: Phasing SSB rigs

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-20 02:47:20 UTC
From: Jim Pennell <NoSpam@killspam.com>
Message-ID: <a2db49$udv$1@slb7.atl.mindspring.net>
Source record: 45527
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew

It seems to me that a DSP ought to be able to take the audio waveform and use a DDS to generate the actual SSB output signal and dispose of filter and mixers and carriers for that matter.

Of course, there is the minor problem of spurs on the DDS and also the upper frequency limit of a DSP system used in this fashion.... Still, I wonder what the performance would be, spur level and frequency limit.

I have no way to judge, since I have little experience in this, but I am interested in seeing if anyone in the group might be able answer.

Thanks,

Jim Pennell

Here's a great way to start a Heathkit catalog collection! From an estate.
I have 10 Heathkit catalogs for sale. All are in good condition. Here's
the list:

1. Spring 88
2. Christmas 88
3. Summer 90
4. Christmas 86
5. Winter 91
6. Christmas 89
7. Winter 89
8. Summer 90 (Different front cover than #3)
9. Fall 88
10. Spring 89 (some slight water damage)

$70 plus shipping. Money order preferred. Please email if interested.

Source record: 45529

I, likewise, have the venerable GSB101. Mine is stock, except for 3B28's replacing the 866's.

Thanks for the head's-up on the HV choke. My manual is silent on the inductance value, too.

I would guess that its inductance is somewhere around 50uH. I base this on the fact that the Collins 30L1 circuit uses a 44uH choke in this very same position in its very similar 4X 811 grounded grid tube circuit.

Sounds like a reply from a friend of Mr. Linger since it makes no sense otherwise. If this guy is mad because my original bad guy post was on a FS news group, then I am sorry. I would rather be informed than burnt and I think this warrants warning others. Mr. Linger probably has a long list of happy customers. He also has a list of very unhappy ones and I hope to reduce that. How would you feel if the guy who you bought a lemon from agreed to send you something specific to level out a bad sell and then says "can you wait a while because its tax time". Then you wait, and wait and email and get "sorry I forgot" and nothing.... and "thanks for reminding me" and so on..... Then to receive only a fraction of what was agreed. Then you do a search on recent posts from the liar and see he has many, many thousands of $$ in deals in the same time frame that you let him ride because you felt sorry for the guy because he couldn't pay his taxes. What an insult. What a liar.

## 706. F/S many radios.

I have for sale a number of my radios which I have collected
over the years. Some I can ship , with purchaser paying shipping others must
be picked up. I will take offers as well .

TMC GPR 90 , with TMC matching SSB adpater and TMC speaker.. all excellent
and can send pictures. $2,500.00

R390 one of a kind , in original military case , both meters and can send
pictures .. please make offer

AM transmitters. Heathkit DX 100 , Apache, Johnson Ranger and Johnson
Valiant. Pick up only .. Dx 100 $300.00 , Ranger $350.00 , Valiant $475.00 ,
Apache $400.00 .. all work , condition from good to mint..

Receivers.
Drake R8 $ 500.00
Icom R71A $400.00
Yeasu FRG100 with optional digital input $400.00
Yeasu FR 101S $185.00
Hammarlund HQ 170A $400.00
Kenwood R599D $185.00

Swan 600T $ 400.00
Drake TR4CW Ac-4 supply
RV4C VFO make offer on Drake gear .

Lots more stuff will post more later.
Cleaning out the shack for good.
B.A.

Greetings,

On behalf of Bruce, N9KGR, I'm trying to locate a source for a manual and/or schematic for a Racal 6217A receiver. I've already checked the obvious places (like W7FG) and a Google search didn't turn up anything useful. Any info will be greatly appreciated.

Thanks & 73,

Clark, K9OA

# 709. Re: Updates to the Vintage Racal Website

In article <3C44B750.E9289EAF@verizon.net>, ipassets
<machine.age@verizon.net> writes
>Yeah, and your deletion of Rob Filby's info is pretty shameful. I
>followed your site since its inception, learned a lot about Racal, for
>sure--and much appreciated. But your misunderstanding of what Rob said
>to John Wilson of SWM re Wilson's review of the RA17 etc., is beyond me.
>Rob said nothing disparaging about your site, or you. Perhaps you can
>tell us all here why you are throwing your teddies out of your pram re
>this controversy? Of all people, Filby eats and breathes Racal--the
>education of John Wilson is ongoing re Racal valve gear, and your
>arbitrary action does nothing to further the research, history, or lore
>of Racal.
>Too bad, you had a truly fine site...For a while.
>
>John England
>USA

Well you have your knickers in a twist.

I have never said anything about what Rob may or may not have said to
John Wilson so where do you get the idea of there being a
misunderstanding.?
I have spoken to Rob and he has told me clearly what he said and he did
not say.

It is a shame that you blurt out with out perhaps asking me why I have
re organised MY site first.

Because of the misinformed comments made by John Wilson I have decided
to reduce to content included from other people on the site itself.
This will be on going.

This way I can deal with ANY future problems , legal or technical
,myself, with out worrying about bringing down anyone else.
Also I cannot be accused of relying on other people to supply technical
content.

What my intention was, although I have not got a round to informing
those concerned yet, but you have forced my hand, was to supply space on
the site for people like Rob to have their own page , unconnected from
my site but on the same server for them to include what they wish.
That way any "mud" that gets thrown will stick only on to the person it
was aimed at.

The HMS Collingwood page is an example.
This was agreed during summer 2001.

There are a number of reasons why its has taken many months to complete ,one being the supply of suitable photographs.

Another factor is that I have drifted away from the older equipment in favour of more modern gear and I intend to concentrate on this in future, the exception being the TA127.

I have thrown no teddies out of any prams but I will say that
I run the site and I pay for the hosting of it.
If you feel that strongly then I suggest you host a site for Rob to put info on yourself.

I also notice that I never received any encouraging message from YOU in support of my site.
Lots of messages , but none from YOU.

Keith

Gary E. Wingerd has those, for sure, but you may have to pester him a bit to get an answer, he's very busy fixing and selling racal stuff.....

gewingerd@netzero.com

There is an online RA1217 manual on K4XL's site BAMA

Which is pretty much the same and would certainly be better than nothing

From: Ron Eisenbrey <ab5wg@mylinuxisp.com>
Message-ID: <3c4b2f4e$1@news3.mylinuxisp.com>
Source record: 45458

Anybody got an 80/20 Plate Tank Coil (Heath 40-1666) sitting around or in a parts unit. I believe all three of these amps used the same coil. I could use one to complete a restoration, mine has been modified and I am not sure of the number of turns on the one I have. This is the coil that mounts on the wall of the RF compartment next to the filter capacitor bank. Anyone have one they can spare please get in touch via email.

Thanks,

Ron, AB5WG

# 732. FS/FT Swan 500 Station Complete

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-20 21:00:56 UTC
From: KU4YP <ku4yp@earthlink.net>

hello,

i am listing for sale or trade the following:

1 Swan 500 (not c) transceiver 80-10. output 70 watts on 10m 200+ on 80m cosmetics 8.5 of 10. no letter rubs, broken meters. all lights work. have had excellent signal and audio reports with it. no extra holes or mods.
1) Swan model 410 external vfo. works/looks great.
1) Sure 444 desk mike with Swan logo.
1) Swan model 22b vfo adapter for external vfo
1) Swan model vx-2 vox unit to allow semi-break-in cw and voice vox operation
1) Swan 117xc power supply/speaker. 2 mods done. one is two audio cables with rca plugs on them for use with a timewave dsp-9 (dsp unit not included. mod can be removed) the other is a 12volt muffin fan wired into jones plug at rear of radio. fan sits on four feet about the finals and keeps everything cool.
1) Swan wm-3000 2000 watt meter. works well. has 200/500/1000/2000 scales and is a powered meter.

this station is operational and on the air in my station. an on the air qso can be arranged with a serious buyer. i will trade the above for a good/very good condition heathkit hw-9 with the warc kit and would like the matching tuner and wattmeter with it. cash price would be $325.00 plus shipping from 33860. pictures are availible upon request.

thanks for reading.

Hi,

Due to moving, I have following equipment for sale in the Toronto area. Preferably you will pickup equipment yourself. You pay shipping costs if you live outside the Toronto area.

I would also prefer that everything listed be bought in bulk. I have no time to split it up.

Here is my list. All equipment is in excellent working condition:

1. Anadex Frequency Counter CF-700A, 5Hz-1GHz
2. Heathkit HM-102/1KW, 1.8-30 Mhz Watt/SWR meter
3. Heathkit HM-2102, VHF Watt/SWR meter
3. Heathkit HD-19 Phone Patch
5. Collins 51-J3 receiver, 0-30MHz (mint with manual, owned by ex-Collins employee)
6. David Clark H7010 noise cancelling headset/microphone http://www.davidclark.com/h7010.htm
7. H.P. 400D Voltmeter
8. Bearcat 300 scanner
9. VHF Engineering model PA140/10, 150 W VHF 2M FM Power Amp,(10W in, 140 out)
10. Daven DP-182 Audio Decade Attenuator box
11. 1000ft of RG-223 (50 ohm teflon coax similar in diameter to RG-58)
12. 500ft of 22awg twisted shielded pair cable
13. Assorted box of cables and electronic parts

To enquire, click on the link below and fill out the form. I will get back to you as soon as possible:
http://www.croatianmall.com/email_form.html

## 740. FS Eico 717 Keyer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-20 22:28:04 UTC
From: cvn <jacobs@june.net>
Message-ID: <UvH28.111303$fe1.1971355@bgtnsc06-news.ops.worldnet.att.net>
Source record: 45467

For Sale Eico 717 Keyer
This keyer has been used by me over the years and works well. This is a vacuum tube keyer of about the same vintage as the Hallicrafters TO keyer I think. I now prefer to use my Vibroplex bug most of the time.

The keyer front panel is in good condition. The case is in good condition except that one of the feet is missing. These are stick on feet and probably are not original anyway, I just don't remember. The rubber AC Line cord grommet thru the chassis is not the original. The chassis is dusty but no rust or corrosion.

I have jpgs available if requested.

I want to get $55 plus about $8 for shipping CONUS.

## 747. RE: SX-115 Pricey???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-21 00:35:24 UTC
From: ac6v <ac6v@amsat.org>
Message-ID: <3C4B624C.D21A8DC4@amsat.org>
Source record: 45473

Dave wondered in amazement that an SX-115 sold for $1675 on E-Bay!!

The SX -115 was the top of the line in 1961-1964. It sold for $599.50 then which was a lot of
moola. So I suspect not a lot of them were made. The E-Bay SX-115 was in "pristine
condition" and a museum or serious collector (very serious) had to have this "rare" item. To
you its pricey, to the buyer its perhaps the find of a lifetime and the buyer might have paid 3X
that for it. Price is in the eye of the beholder. People are paying big bucks for old Harleys, old
Philcos, old Chevys, and WWII Zippo lighters and yes old Halli's --- but not me or apparently
you.

Then there is a 64 Chevy Convertible which sold for maybe $4000 new and now sells for
$25,000. Oh - a car is worth that some might say --- well so did the SX-115 buyer.

Capitalism and auctions, supply and demand-- the essence of the good old USA --- I love it.

Others don't and would rather have the government fix the prices - wasn't there a world
power who went belly-up a while back that fixed prices ?????

Thanks, Tony, that's helpful. It gives me a ballpark for the
choke - around 50 H (not uH, for sure!) I had a 5 - 25
H swinging choke - sounds like a fixed ~50 might be better.

Source record: 45478

Hi All,

I picked up a bunch of really old sandstate parts (including RS generic CK-722's) this weekend at a yardsale (it is boatanchor related as I picked up mint FT-101 and several Heathkit acessories). Included were 6 JW Miller Part # 8903-B 455 kHz IF strip kits consisting of a 8901-B 455 kHz IF xfmr and a 8902-B 455 kHz IF strip. Look interesting and the included docs reference an Aug 1966 QST article as a suggested application (40/80m receiver).

Anybody have any experience with these little kits or have a copy of the article?

My Goodness that is some radio to behold!

I have what is probably a silly question...

All that Chrome! Are they covers? Doesn't the heat present a problem?
Or is that the idea?

Thanks
John

## 756. Swap: Collins KWM2/PM-2 for other Boatanchors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-21 04:09:58 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <qwM28.91$ZH4.84420813@newssvr14.news.prodigy.com>
Source record: 45482

Have an excellent KWM-2/PM-2 combination that is in use now. Am considering parting with it for the right Boatanchors. I would be interested in the SX-115, SX-11, 51S-1, (32V-3/2 - 75A-3) or other interesting separates or combinations in equally excellent equipment condition that would be valued at about $1000. Cash can be added if value of the trade is higher (eg. KWM-380). Would also consider the RCA 77DX microphone, pro quality digital video camera or Hasselblad film camera set. The KWM-2 is winged emblem serial number 15,xxx and is virtually flawless. Unmarked front panel and case, with just a tiny chip on the top lid lift ring. Can demo on the air and pictures can be available, of course.
Thought I'd raise it up the flagpole and see what happens. I know money is tight if you're like me and maybe the perfect trade is out there that would make up a great deal for both parties!
73,
Jack

The Osterman book has both the SX-88 and the SX-115 selling for $595. The SX-88 sold six years before, but I don't think this was a big inflation era. Maybe there's a bit of speculative interest in this radio, given the big bucks SX-88's are attracting these days.

I'm looking for the schematics and / or technical documentation for the
Russian R350M agent radio set.
All I've found so far are some magazine articles and none of them has
schematics only descriptions of its intended use.

Any help is appreciated.

Regards,

Nico PA3ESA

$1600 for an SX-115 seems pretty high to me, too, but for some guy who
suddenly gets the hots for owning something and has the cash burning a
hole in the pocket....one can justify anything.

All over the place. Just had a neighbor (non-Ham) buy a Hammarlund HQ180AC in very nice condition at a garage sale (also a non-Ham) for $35. Of course I paid him more than that . A couple of months ago he found a very nice Drake 2-B with 2-BQ for $15 also a a garage sale.

Ron WA0KDS .

Source record: 45398
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

Tube manuals, military books, ARRL pubs and others.
Nothing is "mint" or "like new."
Unless otherwise noted, all books are clean
and complete with tight binding.
Books are plus shipping from 75087.
$2 will mail most single books anywhere in the continental U.S.
Actual postage elsewhere.

Tube Manuals
These manuals are in "use on the bench" condition,
meaning they're clean and the binding is good,
but they are not "display collectibles."

RCA Receiving Tube Manual RC-14, 1940, $10

RCA Receiving Tube Manual RC-17, 1954, $10

RCA Receiving Tube Manual RC-19, 1959, $10

RCA Receiving Tube Manual RC-21, 1961, taped spine $5

RCA Receiving Tube Manual RC-21, 1961, missing cover $5

RCA Receiving Tube booklet, 1948 edition, 24pp, $6

Ken-Rad Essential Characteristics booklet, 1944, 28pp, $6

General Electric "Industrial and Transmitting Tubes for
Communications and Industry" booklet ETX-10G, 1953, 16pp,
includes info on tubes for Atom Bomb research
and a price list, $6

Equipment Manuals
Sams Photofact Folder for Hallicrafters S-94 $4

Sams Photofact Folder for Hallicrafters 8R40 $4

Sams Photofact for Gonset 3158 Monitor Receiver $2 postpaid.

Heathkit Antenna Impedance Meter AM-1 $5

Heathkit Capaci-testere CT-1 $5

Heathkit HP-13 Mobile DC Supply $8

Heathkit HS-24 Mobile Speaker $4

Heathkit VFO VF-1 $12

Heathkit HW-100 factory specification pamphlet. $3

RCA WA-44C Audio Generator $6

Military
Notes on Servicing Radio and Sound Equipment,
U.S. Navy 1942, 186 pp. Sort of a "Hints and Kinks"
for Navy techs in 1942. Last 15 pages have about
1 square inch at the very top margin that has some damage,
but doesn't impact contents. $6

Telegraph and Telephone Signal Converter TA-182/U.
There must be a million of these around and they
have some really good audio iron and tubes in them.
Has the 1953 Supplement. $3

Bendix Model RTA-1B aircraft transceiver.
Good clean condition. $8

Signal Corps School Pamphlet #5 1939 edition
Wire Telegraphy. 84 pages, clean and tight.
Identified Co. A, 2nd Battalion, Fort Monmouth, N.J. $6

The Principles Underlying Radio Communication, 2nd Edition.
1921 Signal Corps Radio Communications book #40, 620pp.
Covers rough but contents clean/complete and full
of very neat early radio stuff. $8
Covers rough
TMC FSK Exciter model XFK service bulletin, postage only.

Power Supply PP-454D/FRT-5 $4

United States Naval Institute Proceedings, May 1940.
Lots of pre-war navy articles and neat pictures.
I like the one where he says that aircraft
aren't going to be decisive in the next war
and that bombers can't do any more then battleships.
ooooooooo-K....
Not much in the way of radio, but interesting if
you're a Navy fan. $5

ARRL Publications
Specialized Communications Techniques
for the Radio Amateur. 1st edition 1975 $8

Operating an Amateur Radio Station, 1939 edition.
Some paper chipping on cover. $5

The Radio Amateur's License Manual, Wartime Edition, 1943.
Ads in the back from National, Hammarlund.
Includes some FCC Commercial License forms from 1943 found
folded inside the book. Nice condition. $10

Other
Radio News Magazines, WW-II Era.

Interesting articles, photos and content.
These are clean and readable, but they're for readers-
not collectors. Some paper chipping, a missing cover
on a couple etc. Six mixed issues. $10 for all.

How to Make Electronics Test Without Specialized Equipment.
R. Turner, 1978, 108 pp, excellent condition. $5

WWII QST magazines. 14 issues of mixed dates
in good condition. Two missing covers. Neat stuff. $20 for all.

# 772. FS/BO: Collins 30K-4

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-21 18:00:07 UTC
From: Walter Treftz <penguino@atlantic.net>
Message-ID: <3C4C5727.DECD332A@atlantic.net>
Source record: 45403

FS: Collins 30K-4 Vintage HF Transmitter.

Taking offers on my partially restored 30K-4 xmtr.
Several years ago I acquired this rig with the idea
of restoring it after retirement. The time has come
and I have come to the conclusion that I bit off
more than I can chew - not technically as it is very
easy to work on (in 5' rack) and straight-forward
circuitry - but timewise. I have been putting about 75%
of my spare time on restoration taking away from
projects that I am now more interested in (i.e., VLF,
antennas, D/F).

It is about 75% restored. On all the individual chasis
they have been cleaned and things like xfmrs, chokes,
etc. were removed, cleaned, repainted, replaced, etc.
Only the cabinet (5' Bud rack) remains to be refinished.
Most of the components have been checked by applying
either 110vac (via Variac) or B+ (variable 0-500vdc
supply) and slowly bring up the applied voltages to
season the electrolytics, check insulation, etc.

It is missing the tubes (6V6, 807, 4-125A in the RF
and the speech ampl/mod tubes). It has the 3-5 mhz
RF coils & xtals. It is unmodified in anyway. The
only addition has been a set of heavy casters so as
to move it about but I plan to remove these so it is
"virgin"

Digital pix are available (complete unit, before/after
of each chasis, etc) to the seriously interested. It
comes with a copy of the complete manual.

I am not interested in donating it and have a lot of
work in it along with the original price I paid.
Naturally, a pickup deal would be ideal as it probably
weighs 500 lbs or better.

If interested, contact:
Walter Treftz (N4GL)

You might check with one of the guys that convert these amps for use
on 6 mtrs. They generally remove the plate/loading caps and coils and
should have them available. The only one I can think of who does/did
this is Carl KM1H. He used to be a regular on the Amps reflector, but
I haven't seen a post from him in some time. His address is/was km1h
at juno.com (change the "at" to "@").
Good luck.

## 775. "Radios by Hallicrafters" question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-21 18:14:08 UTC
From: Dave Moorman <dmoorman4@attbi.com>
Message-ID: <dmoorman4-7339E9.12141121012002@netnews.attbi.com>
Source record: 45401

There are two editions of "Radios by Hallicrafters" by Chuck Dachis.
One is copyright 1996 and the other 1999. Is there a great deal of
difference between the two?

Thanks,

Dave

Geeze some , not all but some of you need to find better things to
do. I changed my email address because after the same address for
years , I was receiving about 75 junk emails per/day. Thats it ,
nothing else. I then lost
the address of the person interested in the SX 115 , somethings just
happen.
So then I tried to find him and did.. If things work out and I am in

contact with him again I plan to sell the SX 115 to him..
Thats it ,period , nothing else .. all she wrote..

Just thought Sparkey would like to know , I've had the TMC gear
since 1992.

Sparkey , speaking of idenity concerns , whats your real name, call
letters
location, I'm sure sparkey isnt your proper name.. But the DX 60 net
address tells me you must be in the Michigan area. But again, why are
you hiding behind
such a email address ? Let us all know who your are "Sparkey ".

## 780. Need manual for RME-41 receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-21 22:17:34 UTC
From: joeryahoocom@yahoo.com
Message-ID: <e08922c6.0201211417.762a427c@posting.google.com>
Source record: 45408

I acquired an RME-41 receiver in decent shape (w/original spkr)
yesterday, and I'm trying to locate a copy of the manual. I've
checked all the usual places: BAMA, AG Tannenbaum, Manualman, and so
far come up empty. This rcvr is similar to the RME-43 but without an
S-meter or crystal filter. Any help will be appreciated!

thanks,

Joe W9TXU

Looking for schematics for T-195/GRC-19 in electronic form.

If anyone has these schematics scanned, I'd appreciate a copy.

In exchange I'll mail you a nifty little I.F. block which has 8 poles
of filter 45MHz input, 4 poles xtal filter, conversion to 455kHz,
4 poles ceramic filter, limiter, FM detector, and output.
Bandwidth is 30kHz, perfect for a weather receiver I.F.

please reply to my home email address

bob_at_atl.org

replace _at_ with @

If one wouldn't mind having them chopped up pretty bad, I guess I could try it. The problem is, they're awfully long. One of them is probably 30 or so inches wide! Any suggestions?

Hey tim. what are you some kind of reject?

You claim you are trying to eliminate spam in the middle of a big post of goods for sale. That's pretty dinggy to me. Just when you want everybody to be able to contact you, you change your name to eliminate spam. What you be smokin?

And why you pissed at me. All I said was that you were legit and it didn't appear that you were trying to scam anybody. I was on your side except for thinking you might be a little lightheaded.

and as for the TMC stuff. that's good. why don't you really do it right and put the price up to about $4500 so you can advertise it here again next month too. ain't nobody gonna pay that for a gpr90 and ssb adapter not even if it's in new condition. the damn receiver's a brick and everybody knows it. next thing you're gonna be tryin to sell an NC60 for a grand. actually why don't you post a message that says it's sold so we all think you got 2500 for it!

I goota get whatever that stuff is you be inhalin

Source record: 45427

I have a Hallicrafters SR-400A Cyclone III. R193 is a potentiometer
located on the right side just under the hood that adjusts the final
amplifier balance. I can not find reference to the value of this pot in the
manual anywhere. If you are familiar with this please advise. I would
greatly appreciate it.

Hi All,

Looking for an Elmer or a repair person in the Chicago area who would like to help me get an Apache on the air by the CX in a few weeks. I have had it about 3 years and with a busy work schedule and chasing a 2 year old daughter around I just have not had the time to look at it in depth......would be willing to pay for the repair or assist.....maybe trade some tubes from my caddies that I have accumulated....open to suggestions....

tnx es 73

Reposting since I think this didn't go through . .

I've just acquired an RME-41 rcvr in OK shape with matching speaker, and I'm trying to locate a copy of the manual. I've checked all the usual sources: W7FG, AG Tannenbaum, ManualMan, Nostalgiaair, BAMA . . so far nothing. The 41 is similar to the 43 but without the crystal filter or meter.

thanks/ Joe W9TXU

I will just say this in regards to affirmative action: A man, ANY MAN, should, and must, be judged on his merit, and his merit ALONE!! Let us remember Dr. Kings own words, "I look to a day when a man will not be judged by the color of his skin, but by the content of his character". Affirmative action is a losing proposition, both for those whom it is meant uplift, and for those, by its inception, who are, in their own right, "disenfranchised". Dropping the bar of qualification, for those who could not otherwise make the grade, serves only to further degrade an already debased system. This is fact, not fantasy. One has only to look at our public schools to see the results of lowering standards so that all can achieve mediocrity equally. The plain fact of the matter is this, man is only equal in the eyes of God. Here on this earth, and in this life, he must strive to meet the mark set by those who came before, and, if possible, surpass them. This is the essence of "excellence". Let us all pray that our Nation will remain a place where excellence is rewarded, and where all people have an equal chance to achieve their ultimate worth. It is my fervent hope that we will remain a nation where the cream is allowed to rise to the top, and not become "homogenized" into an unpalatable mishmash of the average.

By definition, hams are a subset of the general population. I see no reason why the subset should resemble the general population. Further, I see nothing wrong with establishing membership criteria which discriminate against the willfully inept.

The balance of your proposal is based on unproven claims and remedies which could only be formulated by a racist mindset. Or a troll.

Well, I'm an earnest Democrat, and I don't claim him :-)

He's a troll. In the past, he's posted similar diatribes for getting more Hispanics on repeaters through affirmative action. Just wait'll Cinco de Mayo day, he'll pop up again. For now, I'd ignore him.

Using your criteria of lowering standards for minorities leads to the logical conclusion in the medical field. You know, I don't think minority physicians should need to take all of those difficult board exams. They are really just too hard. mmmmmmmm, is that the surgeon you want to operate on you!

My first QSO, in 1963 Waco Texas, was with WA5FPV, Mel Truesdale, who happened to be black.
Mel wasn't the only black person in the Central Texas Amateur Radio Club, either.
Affirmative action is racist and stupid.

Hi. I'm looking to trade. I have a very good Collins KWM-2 with power supply and 312-B4 station console. I'm looking for a Yaesu FT-990 AC/DC version. I will trade even for the right 990 setup, or we can +/- cash as appropriate. I might consider other rigs besides the FT-990, but that one is my main interest. Please email for details and close-up pics of the KWM-2. You can see an overall picture of the Collins station at

http://members.verizon.net/~vze27dkg/station.jpg

No, the Ranger and Drake 2B are not for sale :-)

Thanks.

Hope it doesn't seem too much like nitpicking, but the Wheaton Community Radio Amatuer hamfest is in Stickney, miles from Wheaton.

http://www.wheatonhamfest.org/

It's worth mentioning because there is at least one hamfest as well as several computer shows regularly hosted at the DuPage County Fairgrounds, in Wheaton, Illinois. It might get confusing!

Anyway, good luck with the sales!!

Excess to my many projects so for sale:
Mid 50s to early 60s Gonset Commander AM/CW all band 50 watt transmitter. This is the one with a door on the front panel to plug in band coils (have 1 or 2). Included is the power supply cable and instruction papers with schematic. Unit looks good and has a nice front panel. $75.00
Also, a TranCon 10 mobile 10 meter transconverter. Good condition with paper work. They were written up in ER. It transmits 10 am and converts the bc radio for receive.Unit is quite small for that time. I had another one in the early 60s. they are definately rare. $75.00 73s Lew KlNDV

Ever notice how much American '50's stuff goes to Japan? In my imagination, the buyers are retiring American schooled Japanese executives and engineers who are buying the "really cool" things they wanted when they were in college. In twenty-five years, their survivors are gonna say "What the hell is this junk?!" and sell it for whatever they can get in a Japanese garage sale.

GREAT IDEA and while we're at it ever notice how few Whites, Asians, and Hispanics are in PROFESSIONAL ATHLETICS?

In order for all to be representative of society at large we must pass a law and create the PAEC (Professional Athletics Equality Corp) to enforce this new law.

This new law will mandate that all athletic teams will represent the US population as a whole, Male and Female, those with physical and mental disabilities and have appropriate numbers of each racial group. There will be a special enforcement team that will also enforce each athletic team having the appropriate number of each group.

It will be against the law for ANY athletic team, while playing in a game to have other than the proportional number of players representing the USA at large. Any team found in violation of this will forfeit the game. A second infraction will result in the team having to do community service instead of practice and playing a game the next week.

By the way, those with physical disabilities include those who are short rather than tall and those who weigh in the normal body weights rather than those freaks who are 6 feet tall and weight 300 pounds. Thus a basketball team must have the appropriate number of 5 foot tall players and football teams must have the appropriate number of 100 pound players and they must be playing during the entire game. Appropriate allowance will be made so that those players confined to wheelchairs will have equal access to all facilities and be able to easily line up for scrimmage.

Thus the entire spectrum of professional athletics (hey, coaches are included as well) MUST within 60 days represent the USA as a whole.

I'm sure that even you, as our resident troll (idiot) will be able to play a large portion of each game without practice or any particular physical attributes that are now required.

DSP speed limits you to a frequency in the low tens of kilohertz range,
but a DDS isn't needed since the DSP can generate the carrier directly
via indexing into a sine lookup table. This is the way SSB is generated
in several modern amateur transceivers.

Now a hybrid system doesn't have the frequency limitation posed by
DSP speed. If you do the I and Q audio in DSP, the carrier with a hardware
DDS (followed by suitable cleanup PLLs for the main and quadrature channels),
and mix in a traditional pair of balanced mixers, you can operate directly on
virtually any frequency.

Rick Campbell's R2 and T2 updated with DSP for the audio is an example
of this sort of design. I've built this sort of transmitter and receiver, and there
was an article in QST a while back outlining a similar system. Performance
is limited primarily by how well the analog balanced mixers are matched
(and you can tweak the code to compensate for some imbalance).

The Japanese recession certainly could have had an influence. If you had a yen to invest, which looks more attractive - Japanese stocks and real estate or high end American boatanchors?

Anyone have any ides on ways to fill holes that have been drilled into vintage radio cabinets? Other than the obvious one of putting a screw in the hole I want to put the cabinet back to original. I have one aluminum and one steel cabinet. Anyone tried JB Weld?

Haven't tried JB Weld - but I have had good success another way:
Fill the holes with a good two-part epoxy. On a small (less than 1/4 inch) hole; I usually place a piece of tape across the hole - place the cabinet so the hole is "up" - and pour in enough epoxy to slightly overfill the hole. Larger holes should have some kind of "backer material". After the epoxy sets - sand flat. Be sure and allow it to "cure" for a couple of days - as some continue to shrink slightly for a while - even after "setting". If it shrinks after sanding (i.e. leaving a depression) - use filler putty (available where every hobby paints / modeling supplies are sold). Then touch up the paint - although as often as not I repaint the entire cabinet so it matches and looks original.

best regards...

JB Weld is a two part epoxy.

Phil

Right Go to your favorite search site (google.com, etc.) and search for "nixie clock." You'll find pointers to various kits & schematics. I bought a clock kit and nixie tubes several months ago and still haven't gotten around to assembling it. But that's my problem :-)

The one part of the R-388 that I would not want to troubleshoot without a schematic (a BIG copy that I can mark on) is the AGC system. I really had to understand it before I could convince myself that one of those metal-box military bathtub oil caps could actually be that leaky. It was.

I sure hope there aren't 71+49==120 versions of that circuit out there!

A friend had one of those. Even better, it had some fancy functions
like accumulated count or something like that. So you could get
the numbers to count up at a rapid rate. Since Nixie tubes, unlike
seven segment readouts, have a set of distinct numbers one in front
of the other, you'd see the numbers move in depth as they counted up.

Nixie tubes are far more interesting than that someone has a Nixie
clock to sell. I sure was disappointed that the original poster
wasn't trying to discuss them, but only to sell one.

I guess this could fall under Boat Anchors....

Have a Tandy Coco II color computer with a Kantronics Terminal. Does just about everything except Packet, Pactor. It will do such things as CW, RTTY, AFSCII, ASCII, etc. Needs only a speaker plug, mic plug to match your unit and a external power supply to power the terminal unit about 12 VDC@ 3amp.. Works well with a small tv set. Manual for the terminal comes with it. Worked well when last used. $50 for all plus shipping.

AT&T Laptop. Monochrome Screen. Windows 3.1 on it. Works ok on AC Adapter, needs new battery pack. Comes with a case in poor to fair but somewhat useable condition and a mouse as well as the AC Adapter and a manual. $65 plus shipping. Good for packet?????

Other items available... List is too long. If in need of something ask. I may have it. Got to clear some stuff out.

Yep, I've successfully used JB Weld to fill a 7/8" hole in a cabinet.
It took a bit of filing and sanding to get the surface perfectly
smooth, but after a little elbow grease and a can of spray paint, the
box looks like new.

## 852. Hw 101 R 304 blown - please help could power supply be at fault?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-23 07:43:54 UTC
From: Scott <GAEL79@Peoplepc.com>
Message-ID: <u4sqdsj0890i01@corp.supernews.com>
Source record: 45379

Hi, I am new at this, so be gentle. I just got a Heathkit HW 101 and HP 23 power supply from a friend's relative. Of course it doesn't work. I have NEVER had it plugged in, and it has been sitting for a while. I opened it up to see what was wrong and to check for a possible bad tube. Near V18, is a 7watt resistor, 1k ohm R 304 burned. I replaced the resistor, but couldn't find the short to ground, that caused the resister to blow.

Like I said, I have never had it powered up, and now, without knowing what caused it to blow, am kind of afraid to, until I talk to someone who has had a similar experiance or perhaps a "Heathkit Guru" who knows these this inside out.

Could bad Cap's in the power supply cause too much or the wrong type of voltage to enter that circuit, that would cause this damage? Could a momentary surge in home voltage, cause this to have happen, (I assume it is why whoever owned it prior, stoped using it.

Can I check the voltages out of the HP 23, by simply shorting the ac common and ac sw connections together? Is there anything I can do to ease the filter caps back to life?

Sorry for all the questions, If the individual reponding, would rather E-mail me directly, that is fine.

I welcome any suggestions!!!

Thank you,

Scott

My brain is turning to mush. It was a pre-Nixie counter, with about 8
columns of numbers, one for each decimal place. The correct number in
each column was backlit. It was a 19" rack model and was easily a foot
high. Very heavy. It might have been HP, but it's been a while. A
Nixie counter would have been tiny in comparison.

I see no obvious place for the problem that you have.,look over relay RL2,moisture could cause it to short to ground ..I would connect a 120 volt 200 watt lamp in series with power input line .if you have a short ,the lamp will show full brilliance, if it is clear the lamp will glow dull.this will allow the power supply and the rig to dry out,and caps will re form etc.. let it run couple hours ,you should have all voltages present ,they will be reduced to 1/2 value or less. the fils will be dull. vr tubes will not light.. good luck 73 Hal W4PQW

Add in the cost of air-mailing a boat anchor across the Pacific, damn, that
would probably cost more than what the rig originally cost. (Surface travel, by
ship, would take months, so I imagine these rigs are getting air-mailed.)

In the same vein.... NLS (Non-Linear Systems) made a digital voltmeter that used little lamps and slabs of clear PVC or Lucite plastic etched with each digit. It had 6 digits with 10 slabs in each digit position (0-9)

It was kinda neat to watch each individual piece of plastic slab light up while you made voltage measurements. Ohms was neat too as you could make the whole thing go crazy by running the probes over your fingers.

NLS must had not sold too many of them. They got out of the Digital VOM market and started making Kaypro computers.

Anyone else remember those old NLS voltmeters?

Sure; we had 'em in the lab where I worked as a technician back in the
mid 1960s.

But then, I'm old enough to remember HP counters which had displays made
up of an array of vertical columns of iluminated numbers, zero to nine,
back-lit by individual lamps.

We had 'em. And Cubic DVMs and counters. And HP DVMs and counters,
and one of those enormous old HP synthesizers with a dozen or so
columns of ten pushbuttons.

: Anyone else remember those old NLS voltmeters?

Afraid so. And Astrodata IRIG-A/B/C time code en-/decoders. And
Becman PCM decommutators. The Astrodata and Beckman stuff had
clocks and DACs that were about as stable as a palm tree in a
hurricane. The Astrodata decoder's internal clock was supposed to
follow the clock rate on the telemetry tape, so that when we had
a signal dropout, it'd maintain sync over the dropout and not
have to slew all over the place trying to get back in sync when
the signal came back. Nixie readout, all discrete components,
which brings my reminiscences about the Mercury and Gemini shots
back on-topic.

Myself and another Ham purchased two supposedly working PRC-70 radios
from a Mike Linger at this email address. Both radios were burned up and

could never have worked as stated. After Mr. Linger agreed to pay for
half the repair (over $360) it took nearly a year to get only $50 from
him. I have a long record of correspondence if anyone has any questions.

I would also like to hear from other Hams who have had similar problems
with Mr. Linger. Buyer beware!
Also, Mr. Linger forgot to mention that the serial numbers were ground
off each radio....

Source record: 45299

I have a couple of extra original CX7 Manuals. One is titled CX7 Owner's Manual and is dated Sept 1 1969. It has 81 pages and is stamped "Preliminary" on the cover. It is in very nice condition and has all of the fold out schematics.I am asking $25 for it or best offer. The other one is titled Operation and Maintenance Manual for the Model CX7 and is dated November 1970. It is in good condition, but not as nice as the 1969 Manual. The Front Cover is missing and the Title page has some wear. It does not appear to have all of the fold out schematics. Otherwise complete. I am asking $15 for it. I pay for shipping. Thanks, Charlie Hugg, K5MBX

Back in the late 60s and early 70s I worked for Burroughs Corp in
New Jersey. I had more Nixie tubes available to me than you could
possibly imagine. Of course those were mostly production rejects
but some of the tubes were very difficult to tell that they were
rejects. And yes, they did have some very big tubes but they also
had some very small ones. The first digital clock that I ever designed
completely fit into a display box that was only 6" W x 2" H x 4" D.
That was power supply, ICs, and display tubes. All my friends were
totally amazed. The hardest part of the design was trying to make
those early counter ICs, 7490s, divide by 6 reliably. This was
before all the nice synchronous counter chips were available.

TTL chips needed a high voltage interface chip between the counter
and the nixie tube, because the nixies ran off of 170V. At the time,
Burroughs developed a decade ring counter that could drive a nixie
directly. It was a nice chip that was built around a SCS counter
chain. It was great. You could clock this thing at 100 Kcs. :)
It never did catch on however. I think I still have some around.

They also had a nice DC-DC converter for those who didn't want to build a 170 Volt supply. It was a little 2 x 2 x 2 cube that contained one transistor, a couple of resistors, and a toroid. Five volts in, 170 volts out with enough current to drive 6-8 nixies continuously.

You are correct that the numeric tube had numbers one in front of the other. If you examine them carefully you will see that the odd and even numbers are interleaved and reversed so that counting from 0 to 9 caused the display to first go deep and then return before rolling over to 0 again. This was to prevent you from getting sick watching the tubes count and also reduced the distance traveled from number to number.

But, not all nixies contained just numbers. There were 7 segment and 13 segment nixie tubes. The 7 segment ones were for numeric displays and the 13 segment ones were for alphanumeric displays.

Our biggest product was a thing called a "Programmer". A "Programmer" was actually a counter and display device for the big Xerox copy machines. It had big rotary switches on the front that set the number of copies and the nixies would count the copies as they were made. At the time, you had to pay Xerox by the copy and there was a price break when you made X amount of copies of the same thing. The "Programmer" would also kick over mechanical counters so that the owner of the copy machine would get his price breaks every month. Boy, imagine having to pay for your printouts by the page these days?

Oh well, just reminiscing.

It should be a voltage regulator. If working, it keeps the voltage on that line at 150V. It's alternatively known as 0D3A. Think in terms of a fancy neon bulb.

I don't know about that receiver, but voltage regulator tubes were used only for specific sections in consumer equipment. Meaning, it must be there to keep the voltage to the oscillator tube constant. If the tube is bad, it will affect frequency stability. I can't see it affecting sensitivity and audio.

That's a voltage regulator. 0D3 is the later version.

The "VR-xx" tubes have maximum current rating of 30 mA while the 0x3
tubes can handle 40 mA. They are otherwise equivalent. Many tubes are
marked "VR-150/0D3"
or some such.

## 879. Simple Repair of Tube Equipment

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-23 19:10:07 UTC
From: tomg@fullnet.com
Message-ID: <11915d6.0201231110.7d3c2fad@posting.google.com>
Source record: 45308

I get a lot of email from people wanting to repair or refurbish old antique radios, and other old vacuum tube equipment. My replies are almost always the same ("Forget the tubes. First, replace all of the electrolytic capacitors...", etc). So I have posted the common information and useful links, etc, on a webpage, at:

http://www.fullnet.com/u/tomg/tuberep.htm

I would appreciate any comments and corrections, et al, since my experience is rather limited. I'm at: tomg@fullnet.com

By the way, I also have pages with lots of used Tektronix, HP, and other electronic TEST EQUIPMENT and manuals (and some new components) for sale, and pages about: making your own printed circuit boards from laser printed patterns (cheap and easy; copy machines work, too; complete, VERY detailed procedure is posted), free plans for my "easiest" decade resistor box (using pre-made circuit boards available from Radio Shack), my Curve Tracer kits and plans for sale, used vacuum tubes for sale, my antique radio and electronics collection, my many excellent electronics, Tektronix-related, and many other categories of LINKS, and some other stuff. It's all at:

http://www.fullnet.com/u/tomg

Thanks.

Tom Gootee

This is a proper number and also there is another, though I don't have it handy, that will be similar to, say, OC3 - i.e., it is a common octal 150 volt gas regulator tube. It is not likely the source of your problem, and if it is igniting and stabilizing very close to 150 v in the set it is fine. It does not require a tubechecker though one certainly may do so. May we assume you have already recapped the whole radio?

## 881. Hammarlund XC-100 and XC-455

Oh yes indeed. But more often, what one ends up doing is making a BIG
copy of the SMALL copy that the over-enthusiastic former owner already
marked up to the point of near-illegibility with colored highlighter
decorations, incorrect parts list reference scribblings in black ink,
and dream-list things such as "cut here for SSB adaptor that I don't
own yet IAW CQ pg. 69 March 1955" and "replaced this resistor at 0130
2/14/57, no THIS one." :-)

>I really had to
> understand it before I could convince myself that one of those metal-box
> military bathtub oil caps could actually be that leaky. It was.

The speed of convincing is directly proportional to the number of
equivalent caps you think you not only own but actually may be able to
find this week, that might fit into the same space without chiselling,
flamecutting or shorting something.

A VR-150 is a voltage regulation tube, John.

I also checked the schematic and tube list from BAMA, and the VR-150
isn't on the schematic or in the tube list. The picture of the S-20
from LA5KI's gallery shows no tube directly behind the bandspread knob
but a big empty space. It looks like the VR-150 is an add-on by a
previous owner seeking a little more stability.

Source record: 45304
Cross-posted to: rec.radio.amateur.boatanchors,alt.ham-radio.marketplace

What I might pay and what a collector might pay are two different things. First determine if it is a collector item or a user. What does the copper on the chassis look like? Are there any dings in the case? Scratches? Front panel condition including lettering? How does it work? Is it in use in someones shack or was it bought on speculation by someone at an estate sale that doesn't have a clue about it's condition? Are you buying it as a collectable or nostalgia or to use (or all of the above?) Are the spare tubes new or pulls? What do you plan to use for a transmitter with it? TX-4b? Other? Does it come with the matching (MS-4)speaker?

I sold a TX-4b/R-4b/AC-4/MS-4 that was in user condition, repainted cabinet, some black spots on chassis, worked, but would have benefited from an alignment, with a spare set of tubes (less finals) for $300. That was about 2 years ago. I don't know what the tube complement of the R-4b is off the top of my head, but I would think it would cost $30-45 to put together a set. If it comes with an MS-4 speaker, they go for ~$50. The radio, if working, should go for $80-120 depending on condition. That's a user condition radio. If it's new in the factory box with original manuals and sales slip from Henry Radio or some such place, you have just gone into collector heaven and can expect to pay a bunch.

Good luck

Gene

I wrote that one weekend, before the first radio was completed. (I'm sure the statute of limitations has worn out by now.) I'll offer you postage for it. Oh, and a couple bucks for gasoline to the P.O. and the hassle with USPS.

Thanks for the information. It's curious, when I looked at the schematic, this tube was not shown anywhere. I think the problem I was having was from a pair of 6K7s that were bad.

>wasn't trying to discuss them, but only to sell one.

Quite right! I built a nixie clock last year and am planning to build a clock soon with those even more ancient incandescent displays where the numbers are made of dots formed from the ends of fibre optic strands in the appropriate shape.

I used TTL and one of those packaged crystal oscillators for the reference (all form the junque box). The hardest part was finding the 74141 driver chips. I eventually found a fellow in Switzerland who was selling Russian copies of standard TTL and he sent me the chips very promptly. The clock has eight ZM1040 nixies, about 27 mm high.

It looks great and is a real talking point when visitors see it.

I also still use a HP 5245M nixie counter too, and have a 524B monster counter, the one with the columns of neon tubes.

In anyone in Australia is reading this and has another of those 524 series counters to dispose of, I'm in the market!!

Hi group, probably off topic, but still:

I want to convert a homebrew 144MHz PA to 50MHz. yes, it´s a boatanchor :-) but it´s working, and a friend of mine cud really use it.

Basically, I will need dimensions on input links as well as output links. I´d like to re-use everything else, incl tune/load capacitors.

Please have a look at

www.it.mah.se/6m/0640.htm

I have got the tools (I have built a few guitar (tube) amps), reasonable knowledge, but lack RF (tube) skills...

Any pointers wud be highly appreciated.

Thanks for your time , cheers from Sweden /Rick, SM7SCJ

Richard,

The tube looks like what we call over here, a 5894. Good for about 80 to 100 watts out. You will probably find the plate voltage to be from
550 to 800 volts. You will have to change the input and output coils and all tuning capacitors. You may be able to use some but they all
look too small in capacitance for 6 meters.
Best if you can get hold of an older ARRL handbook. Somewhere in the 60's or 70's should have some articles in there on an amplifier using
that tube.

...and lets not forget the RCA Numitrons!

You could buy the tube separately or you could get a the tube RCA DR2000 and a CD2500E decoder driver chip all on one circuit board.

What's the diffence? Nixies required +200 VDC on the plate ?!? and then you would ground a pin for each digit.

RCA Numitrons only required +5 vdc so it was already TTL compatible!

What ever happened to them? Don't know - this was about the early 70's when Jap calculators started coming out with cold cathode tube displays that looked a lot like Numitrons. 3 or 4 years later, the first LED calculators and LED watches started to appear. LEDs only had one color back then (red) and the digits were very tiny to save on batteries. Remember those watches where you had to press the button to see the LEDs to find out what time it was? That was sooooo 70's.

;^)

well all that is off topic to to get back on the beam - the only rigs I have ever seen use Nixies were Sig/Ones and a Robyn SSB transceiver. Are they any more Nixe ham rigs?

-Biz

I don't remember the S-20 having a voltage regulator tube. Could
be someone added it to try and stabilize the oscillator from
drifting.

# 903. Re: Collins R-388 modification info needed

Source record: 45330

Hello Bob -
I apologize for the delay in getting back to you. I think I may already have that article in Ham Radio as I got in touch with several other Collins owners on the 390 user's group. I currently have about 4 different ways to add the product detector. I've decided to do the Dallas Lankford mod that came out in the Hollow State News. I certainly don't expect it to be the equivalent of the modern receivers but I'd like to try. As to putting it on ebay I would probably keep the mod(s) in as I saw an R-388 with those mods and the seller explained that it was all documented, etc. He ended up getting over $500 for it without a cabinet. Thanks for the response.

73,
Bruce K6RQR

## 904. Need Manual for Motorola tube type Handie Talkie

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-24 03:58:55 UTC
From: James Gerwitz <jgerwitzsprint@earthlink.net>
Message-ID: <3C4F8390.BA879256@earthlink.net>
Source record: 45331

I am looking for a manual for a Motorola HT (Handi-Talkie).
Here is what I know about it:
It is a VHF unit, probably 135 to 174 Mhz, HT Model number is
H23AAM-1001AM
Chassis no. is: NCN6000A
Receiver no. is: NFN6000AW
Transmitter no. is: NTD6000AA
Power Supply is NU-137-4
Unit was manufactured in August 1959
I presently have a manual number 68P81005A40 but it does not cover
this
exact model even though it says it should. The Rx has 1AD4 peanut
tubes.
Can anybody help please?
Jim
AC7FN
HM: 480-948-9304
WK: 480-441-1232
Pls reply directly to jgerwitzsprint@earthlink.net
Thank You

Oh yeah, these looked great in '50s sci-fi movies.
Where I worked, I parted out a really cool display system -- each display unit had 10 bulbs in it, each with a little image of its digit and lens that projected the digit onto the frosted plastic screen in front. Maybe 1.5" high. I even brought some of those units home, but ended up trashing them. The bulbs (plain old pilot lamps) were so slow that you couldn't read the things until the counter froze. But so neat!

# 906. Re: Hw 101 R 304 blown - please help could power supply be at fault?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-24 04:45:46 UTC
From: ehsjr@bellatlantic.net
Message-ID: <3C4F9181.57F815C7@bellatlantic.net>
Source record: 45333

You can check the voltages from the HP23 without it being loaded
by the HW101. Bad capacitors in the power supply would not
cause R 304 to burn out. You don't need a short to ground
for it to die - a partial short would do it.
The above is based on an analysis of a schematic I found
on-line, which is not that clear.
http://www.tom80.freeserve.co.uk/diagrams/hw-101-a.gif

However, I believe that resistor feeds V18, an OA2 voltage
regulator. If it is bad, it could draw too much current, and
kill that resistor. There is also another 7W resistor in the
circuit, but I can't read the numbers. Check that resistor,
which feeds the plate of the OA2, with an ohm meter to
make sure it is the right value. There is a capacitor connected
to the junction of those 2 resistors and ground. That
cap could be bad - probably a good idea to replace it.

A surge would not cook that resistor, but it can cook under
normal circumstances over time, so you may not have a problem.

Someone gave you good advice about putting a lamp in
series with the power supply AC input. However, I would
want to be even more gentle with it in forming the capacitors.
I would power it from a 12V ac transformer first, for a couple
of hours. Check your voltages under that condition - they
should be one tenth of normal, with the supply not connected
to the HW101. It's a lot safer for you that way, too. After
that, I'd use the lamp technique, and I would first use a low
wattage bulb - say 25 watts - for a couple of hours, then
go to 40 watts, then 60 etc. Of course, if you have a variac
than use that and forget about the bulbs!

Once you have completed the forming, it's time to test
with the rig connected, and the high wattage bulb in
series with the AC input to the supply. With the rig
turned on, measure the voltage to ground on the
power supply line that connects to that R 304.
Then measure the voltage across the resistor.
Using ohms law, you can compute the current
through the resistor. It must be substantially under
80 ma. If that checks out, then it's time to try the
thing without the series bulb. Again, measure the
voltage across that resistor, and compute the current
through it (Current = Voltage/Resistance) If the
current is anything over 60 ma, I'd replace that 7W

resistor with a 10W resistor. You want power
resistors to be well over rated. If it is over 80 ma,
then you have a problem somewhere that will blow
the resistor again. As I mentioned, I can't read the
schematic well - it is not 100% clear. However, I
believe that resistor is in the screen supply circuit
for the driver and the finals. It is possible that one of
the tubes developed a screen to cathode short
when it was hot, which cleared when it cooled.
There is a diode in that circuit - looks like D90
Check it with power off to make sure it's good.

Let us know how you make out.

Gary,

tnx for the input. I have a 1964 handbook, but nothing in that covering double tetrodes and 6m. Handbooks are hard to come by over here (Sweden) but can be found online at 15USD and up plus S&H.......which is kinda expensive, especially when you dont know what issue might have something useful.

The caps are probably fine, judging by what I found already, I just need the basics for the input/output coils, given that I recycle the tuning caps. I bet someone has built something similar 25 yrs ago :-) with same cap size or similar....

Well, lets just see who else has input on this. Thanks so far, Gary!

Cheers /Rick

# 914. FA - DX-Eng Speech Processor for the Collins 32S1/3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-24 20:56:41 UTC
From: Me <me@nym.alias.net>
Message-ID: <u4t05u4crs1i5oavm1rpqc8agqljataki7@4ax.com>
Source record: 45341

Here is an excellent DX-Engineering speech processor/linear compressor model LC-1-32S, serial
no. 379 for the Collins 32S-1/3 transmitter. This unit will give you added talk power to get over the
pileups, and is a true plug and play addition, with a switch on top for in or out operation. Included is
a copy of the manual on floppy disk and a tube already installed. Just pull out your first I.F. tube
(V3) and plug in the processor, and your in business. Buyer to pay with a money order or cashiers
check within seven days from the end of the auction. $7.00 shipping total includes insurance.

# 915. Collins 6 Khz AM Filter for the 75S3B/C

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-24 20:59:51 UTC
From: Me <me@nym.alias.net>
Message-ID: <lbt05uoluf0eegjdpep9j65i3r9v14mlon@4ax.com>
Source record: 45342

The rarest and hardest to find of all Collins S-Line mechanical
filters, This is the F455FC60, 6.0 kHz
bandwidth AM mechanical filter. It's in perfect mechanical and
electrical condition and will greatly
enhance your 75S-3B or C receivers AM operation. 6 kHz is the ideal
bandwidth for good fidelity
and adjacent frequency splatter elimination. This filter is a drastic
improvement over the stock dual
I.F. can filters that are normally used for AM. Filter date code
indicates it was manufactured the
17th week of 1965. Buyer to pay with a money order or cashiers check
within seven days from the
end of the auction. $7.00 shipping total includes insurance.

and if you use the same socket but YL1070 valve you may easily achieve
almost 200W - even on 2m, anode connectors may be modified without
great difficulties

I used 900-950V supply for my 06/40 amplifier, later YL1070 and
YL1060, used the amplifier over 20 years, until the 40 year old mains
transformer broke down

Sorry, no schematics found in ARRL '49 handbook, only 829 amp for 2m

Hello, I have an old mobile UHF radio that I am trying to get some information on. I believe it to be an RCA series 700 radio. Here is the information I have.

Model CMLL4MMB
Channel Element 3457514
Remote head and mic. RCA is the only thing on it.

I can get some crystals for it (that is how I fould out that it might be a series 700) but I would like to have some more information on it. Would also prefer a manual too.

I have searched the web for quite some time and have been able to find references to it but no pictures and no real information.

Thank you for any help you might be able to privide.

RCA sold out their land mobile operation in 83.

They were big with state agencies out east, you might start by calling Departments of Transportation in PA, NY, NJ; and ask for the chief communications engineer.....my experience is that state agencies keep old manuals/paperwork forever.....

good luck.....that stuff was built like a battleship, it should work if you can find the info.

From: Richard J <nospam@nospam.mah.se>
Message-ID: <a2r762$glg$1@news.lth.se>
Source record: 45255

Hmm....one more thing:

> grid coil is 8+8T 24SWG enam cu wire on T50-10 core, untuned - no
> capacitor, input link is 3T with 50pF to ground

This is strange - a search on T50-10 shows a ferrite core? Now, 8+8 turns on a core like that, do they mean two windings side by side on the core, centrepoint connected to grid voltage? And the input link, should that be wound on same core? How? ANy pictures available, J-M, so that you can tell me how to do this?

Forgive my ignorance, but I thought all these coils were based on "thin air", first time I come across ferrite (in inputs)?

I know VERY little abt ferrite, maybe it increases Q and/or coupling thereby suppressing unwanted stuff?

There has to be an alternative, I think. I'd like to avoid having to shop for cores, this was intended as a weekend project, and it's friday :-), and I still need to find TX/RX relays someplace...

No idea, as always :-)

Cheers /Rick

I had this stuff sitting around the radio room for several years now
and decided to sell. As a former member of the CCA I kept these
somewhat rare items in excellent shape. I am asking fair and not
inflated prices. Please reply direct to my e-mail, as I don't check
the board often. Sorry, I have no digital camera so I’ve
described the best I can.

# 1 Collins hardcover book with dustcover. Excellent shape "The
First Fifty years" $80 shipped

# 2 Paperweight 50th Anniversary 1933-1983, shows all the
Collins/Rockwell logo’s from first to last (4) $35 shipped

# 3 Framed photo that hung in the main office complex at Cedar
Rapids. I got these photo years back from an employee whose wife had
retired after 25 years at Cedar Rapids.
Frame is 13 1/2x 15 ï¿½ with a light pine wood border. Photo image is
15x 10 ï¿½
And on a white background, B&W Photo is of the Western Region Collins
office in Burbank, California as seen on page 97 of the book above.
$100 shipped

# 4 Collins metal equipment emblem Red/Silver from a KW-1 Framed
and professionally double matted. Grey background, Red mat is cutout
to match the Collins emblem. Silver frame,
Emblem is 5 ï¿½ in long. Frame size is 10 1/2x 6 ï¿½ $100 shipped

Some new stuff has been added at www.ab7sl.com in the past few weeks....

1. Site search - the entire site is now indexed and searchable from the
homepage

2. Arizona Repeaters Page - covering all repeaters statewide
on ALL bands. Sorted by county,band and frequency.
This added some 20 pages to the site.....

3. Weather Page - shows temps for selected US cities , full weather
conditions
for Prescott,AZ and USA - World weather maps and forecasts...

4. Added a Grand Kids Photos page....they are so cute and adorable!

Which bands(s) are you experiencing the interference on? If your neighbor's 6m signal is affecting your reception on the HF bands, you can put a 30 MHz lowpass filter on your 680 to prevent 6m from getting in. However, if the problem occurs when you're tuned to 6m, it's a more difficult situation. The 680's front end may be getting overloaded. If the 680 has a 10 or 20 dB attenuator, switch it in and see if that helps reduce the overload. Beyond that, the remedies become more complex, such as designing / building / installing a high-intercept point front end.

Also, it _might_ be the case that the intermodulation distortion of your neighbor's TX is not so good and is generating wideband splatter. No amount of filtering on _your_ end will cure that!

Good luck,
Joe K9LY

it is a toroid core, used as - I pressume - Low-Q circuit, not sure
about the tuning. 6m has relatively more bandwidth than 2m, and more
gain in the amplifier, so it shouldn't be problems if you loose some
power

such toroid cores are extremely expensive most places in Europe,
particularly in Scandinavia so you are strongly requested not to feed
those lazy dogs around here. I bought some from a friend (LA8XG) and
although I thought they were expensive, the price is several times
higher from the present representative. also prices in Germany are
tooooo high, you should try UK or USA.

>I know VERY little abt ferrite, maybe it increases Q and/or coupling thereby
>suppressing unwanted stuff?

## 944. 30.000 links

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-26 00:05:15 UTC
From: Willi Passmann <DJ6JZ@compuserve.de>
Message-ID: <a2st59$p5h$02$1@news.t-online.com>
Source record: 45273

Hi folks,

I would like to announce that the radio-portal database now contains more than 30,000 hobby related URLs. During the last two weeks I concentrated on collecting URLs for manuals, modifications and reviews, as this kind of information is of special interest for many of us.

radio-portal is a search engine especially for radio amateurs and short wave listeners; it was awarded by Radio Netherlands with the Milleneum Innovation Award in the year 2000.

If you should not find information on a specific model, try a search using the manufacturer's name, and limit the search to the category of interest (like "Modifications", "Manuals and Schematics", "Reviews"...)

vy 73,
Willi Passmann, DJ6JZ

From: kb1fnf@hotmail.com
Message-ID: <9d57927b.0201261423.4e871510@posting.google.com>
Source record: 45289

Hey guys,

In the past, I've always enjoyed homebrewing some simple QRP stuff for 80, 40 and 20 meters CW and enjoying the challenge (even though I'm not too technically minded), but this past year, I came accross a FTdx570 at a local hamfest. And because it seemed like a decent machine (560 watts input) on 5 bands and 3 modes, and of its uncanny price ($30), I purchased it.

When I took it home and turned it on, I noticed a few flaws (the vfo didn't work, the band switch had no effect on the recieved signal, and the mode switch wouldn't work). Through cooresponding with a fellow ham in my town, I was able to learn how to direct power to the VFO and cause it to opperate. Additionally, he notioned that spraying "TV tuner cleaner" around both switch areas should clear off any dirt that could be disabling me from changing bands and modes. After doing so, I was finally able to recognize that the band switch now was able to change bands, yet the mode swich would still not allow recieved signals to pass through the circuit and to the speakers unless it was postitioned in the LSB position - the CW and USB spots seem deffective.

Neither of us can figure out what is causing those parts of the swich to become deffective.

Any suggestions, or ideas pertaining to the matter would be greatly appreciated.

Thanks in advance es vy73....
....Andy

Sounds like you got a helluva deal, in more ways than one. I'm speaking
generically, but it may be simply a weak carrier oscillator problem.
Often, futzing around with the switch will get it to go but not on a
reliable basis. Given the age of the rig it might be a good idea to
start checking capacitors/resistors in the carrier osc circuit, if not
throughout the whole rig.

Hello all,

I am looking for a service manual for an RCA model AR77 receiver. I woud be very happy to pay for a scan (the higher the resolution the better) of this manual. I need the schematic and alignment portions of this manual the worst, and the rest can be low-res as long as it's readable.

Thank you

Source record: 45194

Greetings,

I'm going to a 'fest in march and I'm looking for an amplifier.
I already have a Yaesu FL2100B that works very well. However,
I want an amp. that'll work on 160M -- without mods. Setting aside
some possible weird or rare beasts, how early did major makers
start to come out with these and what are some to look out for ??
It seems eveybody sells various 10M-80M coverage amps, but
only Ameritron ever shows up at the Hamfests with 10 -160M
coverage amps. WARC bands are not a must.

TIA,

Andrew

I think Drake had an L-7, to go with the TR-7, for a short while before
they stopped making ham gear, and I think it did 160. They are very rare.

Hallicrafters HT-37 Transmitter For Sale.

A Classic! This transmitter is a 18-tube AM-CW-SSB 80 through 10 meter transmitter/exciter. It was manufactured to have a power output of 70 to 100 watts CW or SSB, and 17 to 25 watts AM. This radio's features include phasing-type side band generator, output meter, VOX, full band switching, and VFO. The driver tube is a 12BY7 and the final amplifer is a pair of 6146s. (Companion units to this would be the HT-41 linear amplifer and the SX-111 receiver). Production Year 1959-62.

Excellent shape. Needs a new power cord.
Was in operating condition when taken out of service some
12 years ago.
Clean condition. Front panel is immaculate and case has only a few very minor marks. No modifications.
Will sell for $125.00 plus shipping

Picture and details at:

http://ccfradio.topcities.com/radios.htm

# 977. Re: Would appreciate any help w/ restoring Yaesu FTdx570

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-27 12:59:14 UTC
From: kb1fnf@hotmail.com
Message-ID: <9d57927b.0201270459.212b1368@posting.google.com>
Source record: 45202

thanks a lot bill,

I was fortunate to find the manual packed with in the 570's chassis
when I opened it up at home, so I'll take a look at the parts that
coorespond to the carrier osc circuit. Then I'll replace the parts
that test 'bad' on the VOM.

I wouldn't be surprised if that'll 'awaken the beast!'

Thanks again es 73,

Andy
=kb1fnf=

## 978. Marantz Model 27 schematic needed,..

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-27 13:03:11 UTC
From: perry mason <TAKEOUTmrmasondjp@yahoo.com>
Message-ID: <4ju75uk7lbguk2ehduqk294oviue5ttr13@4ax.com>
Source record: 45203

Ahoy, someone gave me a fabulous Marantz Model 27 receiver. It also says Thirty Thirty on it. The serial is 2707. Everything works except the FM stereo. I works ok in mono but if I press the stereo switch in one channel drops out. Same in the headphone. I only have one channel at the volume control too. It doesn't seem to be build in two identical sides like a lot of old boards so if someone knows where I can get a drawing I'd appreciate it. Thanks, pm.

## 984. FS: JRC NRD-535 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-27 16:05:03 UTC
From: Michael <michaelt@flash.net>
Message-ID: <PyV48.23815$wt3.2206950473@newssvr17.news.prodigy.com>
Source record: 45212

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions.

$600.00 plus shipping and insurance from zip 76001.

Thanks!

Have for sale....

1 - AT&T laptop computer. It works on AC Converter, but Battery pack is dead. Has a mouse, so-so case to carry it in (3 out of 10), the converter and a book. Comes with Windows 3.1. Monochrome screen. $60 plus shipping. Maybe good for field day packet or logging.

1 - Radio Shack Color Computer (I believe a COCO - II ) with a Kantronics Terminal. The whole system worked ok last time used. It comes with the Computer, Terminal and terminal manual. You need to add a mic plug to suit your transceiver, Speaker Plug for your transceiver and a DC Adapter - 12VDC @3 amp. Does RTTY - CW - AFSCII - ASCII. $65 plus shipping.

I've described the items as they are to the best of my knowledge and as to actual operating condition when last tried. ALL IS BEING SOLD AS IS. NO RETURNS.

# 988. FS Nice Collins 51S-1 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-27 18:34:51 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <fLX48.21482$Fh4.1811589@newsread1.prod.itd.earthlink.net>
Source record: 45216

I have for sale a very nice WE Collins 51S-1 receiver. This is a nongoverment receiver with original 51S-1 cabinet and manual. It has not been used much. All knobs are tight and show no slack. The chassis is bright and shiny and very clean. The front panel is perfect and the cabinet is very nice, a few small scuffs and places where a couple of small scratches have been touched up with the correct paint.
I would rate it at least a CCA Very Good. It works super on all bands. It is all original except there has been a small micro switch mounted on the rear panel so that the AGC can be turned on and off for CW operation. There may have been a capacitor added to the AGC circuit because SSB reception is great. NO popping on loud signals. Also sounds great on AM broadcast stations. The SN is 25XX. It does not have a dial brake. Vintage is around 1966. Digital pictures are available upon request. Price is $1475 Plus shipping for 79602.
Thanks, Charlie Hugg, K5MBX

# 989. Military Test Set TS-184A/AP - Info?

From: Roger Basford <Basford@btinternet.com>
Message-ID: <hQcaC$EAHFV8EwVH@btinternet.com>
Source record: 45217

Hi,

Can anyone point me to information on the above cavity wave meter? Has a socket on it marked "To CU-22/APS-13". I believe the APS-13 was a Tail-End Charlie radar operating on around 430 MHz but would be interested to know the vintage and the type of aircraft it was used in, or any other info. Have tried the "mil-list" but nothing listed.

TIA,

Hi,

Due to moving, I have following equipment for sale in the Toronto
area. Preferably you will pickup equipment yourself. You pay shipping
costs if you live outside the Toronto area.

Here is my list. All equipment is in excellent working condition:

1. Heathkit SB401/303 combo (10-80m TX/RX) with Shure 400 microphone
2. Heathkit HM-102/1KW, 1.8-30 Mhz Watt/SWR meter
3. Heathkit HM-2102/1KW, VHF Watt/SWR meter
4. Heathkit HD-19 Phone Patch
5. Collins 51-J3 receiver, 0-30MHz (mint with manual, owned by ex-Collins
employee)
6. Anadex Frequency Counter CF-700A, 5Hz-1GHz
7. David Clark H7010 noise cancelling headset/microphone
http://www.davidclark.com/h7010.htm
8. David Clark H-133C/A1C noise cancelling headset/microphone
9. H.P. 400D Voltmeter
10. Bearcat 300 scanner
11. VHF Engineering model PA140/10, 150 W VHF 2M FM Power Amp,(10W in,
140
out)
12. Daven DP-182 Audio Decade Attenuator box

To enquire, click on the link below and fill out the form. I will get
back to you as soon as possible:

# 999. FA: Zenith Transoceanic

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-28 06:12:42 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <3C54EBDA.CBDEA434@ix.netcom.com>
Source record: 45227
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

I'm never going to get around to restoring this Trans-O,
so better to pass it along. This is going to make someone
a good first Zenith. The "light" color on the top is dust.
The case is dusty but he fabric is in pretty good shape.
Case doors, hinges and handle in good condition.
The antenna is complete and extends freely.
Power cord and reel present and good. Clean, original knobs.
Front panel has one blemish and a craze-
I've taken a close-up photo and it's in the listing.
You can see the blemish above and to the right of the dial face.
Case hardware good.
Chassis looks good, too.
The 1L6 and 50A1 will need to be replaced.
There's even a piece of the owner's manual in the case.
If you have any questions or would like to see
any more photos, please ask before bidding.
I'll do my best to address any concerns fully and forthrightly.

I decided to let the unusual looking ACME radio go, too.
Too many projects- Someone else will make this one look nice.
The case is very solid, heavy wood.
It didn't have any tubes when I got it, so don't blame me ;-).
I'm not sure that crackle finish is original.
If I were going to restore it, I'd do natural wood
because the case is so stout. Original power cord
and plug look pretty good and may be servicable.

If you have any questions or would like other photos,
please ask and I'll do my best to address any concerns.

# 1004. Help - Drake DSR-1 problems or manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-28 11:33:44 UTC
From: vk2ua@yahoo.com
Message-ID: <3c55342a.25722656@news.zip.com.au>
Source record: 45232

Hi

I have recently acquired one of these sets, and although it does work, it has problems with the 100khz VFO and associated 10 khz display tube.

I have been unable to find a schematic or service manual on the net and wonder whether anyone can suggest a source or email a schematic? These sets are rather uncommon in this country, but may be better known in the US.

With regard to the fault, the 10khz Nixie only displays the 3 & 4 values, though "invisible" frequencies can usually, but not always, be heard. I suspect the problem may be with the VFO rather than the Nixie itself (presumably if the tube itself is bad, no numbers at all appear).

Any suggestions gratefully received.

A friend has just informed me that I am being flamed out and I think I should respond. Obviously there are two sides to every story and what has been stated here prior to this response is not only erroneous but also not the full story. He has left out the course of SEVERAL important telephone conversations I had with him shortly after he received the radios I sent him.

I sold Mike two military radio tranceivers (HF) for a substantially reduced price than normal market value because he wanted both tranceivers in a package deal. I had both tranceivers checked out by a technician here before they shipped. When Mike got them he told me they didn't work. I called him and insisted that he return the radios for full refund or repair (by my technician friend). Mike did not want to return them for his money. He knew he had purchased them at a good price and stated he did not want his money back (I should have let it go right there). He also felt that the man I use to fix my stuff wasn't good enough and he didn't have faith that they would be fixed properly. Mike insisted that he wanted them fixed by a guy he knew of that was supposed to be an expert on them and asked if I would split the cost of repair. I informed him that my man could fix them and I didn't want to pay someone else to fix more than what was wrong and give us a "gold plated" bill for repair. Mike insisted on sending the radios to this man anyway and as we left it I said I would pay half of any bill up to $100, simply because I knew my man could repair any problems for about that same price. Half the repairs of $100 cost is $50 and that is all I agreed to pay. When Mike informed me it cost $300 and something dollars for repair I balked at anything over what I said I'd pay. I dragged my feet because I wasn't going to do what he wanted me to. I finally sent him $50 as I originally agreed. Now, get this: He emailed me and told me that the radios still don't work and that they are a bunch of junk. When I asked if they worked after his guy fixed them he informed me that they had worked but then they broke down again and he wasn't going to have them fixed again. I think I have a sour grapes case here but offered to rectify it earlier and have no intention of doing any more. In retrospect, I should have known better. It has always been my policy to return any money to an unsatisfied buyer when it was requested (rarely). I should not have agreed to have someone else fix the radios, if indeed they were in need of repair. I spoke with my technician friend about those particular radios and he informed me they work on 24 volts and if they were powered up by a neophyte at 12 volts that they will likely burn up. I suspect this is what happened in this case. I should never have agreed to have anone but my technician friend work on any radio I sell if something needs repair and the buyer wants to keep the radio

but have it repaired. I have heard horrendous stories about how radios got gold plated inside by technicians running up repair bills.

And get this: serial numbers missing or ground off??? What we have here is a DESPERATE sour grapes case. Funny that this is the first he has mentioned it. He mentions this on the NG but NEVER told me about this accusation. The numbers were on when they left here. I no longer wonder if Mike and/or his technician are playiing games just to try to slander me. Fortunately, I have dealt with many people and have saved quite a few emails from people that were kind enough to let me know how pleased they were with what the got what I shipped them. I hope no one else has to go through this sort of nonsense and will learn from my lesson. Thanks to all who are concerned with these types of transactions. In used equipment transactions it is always BUYER BEWARE and it is up to the seller to accurately describe the equipment as best he can and sell it in working condition (money back guaranteed) or sell it as-is. It is up to the buyer to know what the equipment is, how to use it and check it out (immediately upon arrival) and to ask as many questions as possible to settle in his mind that he knows exactly what he is buying. This fulfilled, the transaction will go smoothly and everyone is happy.....

==========
If the VFO operates the receiver normally, it is probably OK. My
guess (and it is just a guess) is that the Nixie tube driver chip is
bad.
They do fail often. If you can find any numbers on the driver chip,
that may help locate a replacement. Some of the electronics surplus
outfits carry those old parts. If you are lucky, the drivers for the
Nixie digits are discrete transistors, if so your options for repair
are greater.

Best Regards,

Ed

SELL: Ferris Instrument Co signal generator. Vintage age. Appears to be the granddaddy of the Boonton gear as also manufactured in Boonton, NJ and looks exactly like their product style of the 1930-40's

Model: 18-D, freq range: 8 - 210 mhz, 0-1.2v RF output.

Excellent condx, has all tubes, unmodified, original AC cord, atten. pad & cable. Guess to be from the 1930's.

Best reasonable offer. Buyer pays shipping and any "out-of-pocket" packing expenses (no extra charge for packing - if we can find a suitable box - and taking to shipping point of your choice (postal or UPS).

For two weeks now they've been running promos for MODERN MARVELS: MEN's TOYS
In the promo there's somebody actually tuning a SP-600! Only a few seconds,
but it's got me interested.

Series runs at 9PM every night this week on History Channel.

WILL WE BE DISAPPOINTED?

I know. It was discussed at the last meeting of my local radio club. I've read the entire week's write ups in the local tv guide-- Seems mostly cars, boats , and planes.

Another noteworthy thing noticed was that thee's a show this week on the same channel about RC stuff. ( Also Modern Marvels?) The blurb for this one mentions Nicola Tesla's " 1898 steampowered RC boat".
I hope they really show something on it. Tesla was the man!
The Ultimate Homebrewer, IMHO.

Hello All -
I was wondering if anyone knows about the effectiveness of an audio mod for the R-388/51J3 that involves removing C212, the capacitor which is across the primary of the audio output transformer? I have an article about the R-388 from Paul Lee in which he mentions this. Thank you.

73,
Bruce K6RQR

It's been a long time, but I don't remember a "final balance pot". Is this
a capacitor? If so it may be for final neutralization.

I had a lot of hallicrafters gear back in that era, but unfortunately I
don't remember the scematics all that well <sigh>

I'm very new to BA's. But I would love to have
one of those old Hammarlunds. assuming that
it basically "works", is maybe very dirty, but
without major dents and goofy mods,...
How much would you pay at your local Hamfest
if one showed up?? Would rich, old Hams be
bidding each other into the stratosphere ( and
killing your hopes) or what ??

TIA,

Andrew

Mr. Linger needs to get his facts straight, we are not making this up for fun.
Yes, I am a little greedy and would rather have the radios fixed than get the refund which was originally offered. We waited a long time to get them and were very frustrated. Our money was not broken nor defective and we wanted to salvage something out of this. So much for hindsight, at least we saved some other amateurs the pain.
Mr. Linger agreed to pay for half the repair AFTER we had a three hundred and something dollar estimate. I have ALL the email correspondence and the dates don't lie. Before we got the estimate Mr. Linger agreed to pay up to $100 out of his pocket which would cover half of a $200 repair bill. I have this in writing also. Why did he only send $50 after nearly a year? I have to split this with the other owner of the other defective radio from Mr. Linger. Remember, there are two of us that are trying to collect, I am not making this up myself.
The serial #s were absolutely ground off each radio tag when they came out of the box from Mr. Linger. The tags are riveted on and I would be happy to send a pic prove it. I remember not mentioning this to Mr. Linger because he sounded very hot headed and accusatory on the phone and we didn't want to add to his seemingly bad day. I just wanted to get the radios working at this point and not burden him with more bad news. Wouldn't you think Mr. Linger would notice the missing S/N's as he was "on the air with good signal reports"?
I have owned this model of radio for about 10yrs and am very intimate with its workings, do's and don'ts. I have the correct batteries to power them with. I relayed this to Mr. Linger before we purchased them and he still likes to call us "neophytes" and attack our technical background. Mr. Linger does not have a clue what I do for a living. I don't go around telling people that Mr. Linger is a dud in the printing business or what ever he does for a living. But I would like to know who used very bad judgment soldering wires to the precious gold battery contacts before the radios got here.....
On the phone Mr. Linger admitted that his tech might have used a power supply with inadequate current when checking the radios, which can easily damage the radio's power supply in this model if the voltage drops below 19v. This is a very well known thing to avoid on a PRC-70 and Mr. Linger was not aware of this until I told him. I could tell he didn't believe me on the phone and that he thought I was making this up. There were many other problems that go way beyond what the low voltage problem can damage. These radios could not possibly have worked when shipped.
The radios were sent to Jim Karlow K8TUR for evaluation and repair. Jim is the only guy who specializes in repairing this model. All the mil surplus dealers on this earth send them to Mr. Karlow because he is

simply the best and most honest in the business. Mr. Karlow does not "gold plate" the insides and run up the repair bill. Would you want to send the radios back to Mr. Linger and the same guy who may have damaged them in the first place?
After Mr. Linger agreed to pay for half the repair (why not all?) he STROKED us for nearly a year with " I am having a little trouble with taxes" and "what is your mailing address again?" (I have all the emails) all while he was selling many thousands of dollars of equipment on these news groups during the same time. Just do a news group Google search on his email address. Why not just tell me your going to stiff us rather than lie and hope we will go away?
My intent here is to share an unfortunate tale and hope others don't get pushed around via long distance emails. I am sure that if we initially visited Mr. Linger in person and saw the radios, we would have smiled and said thanks but we'll pass on these. Instead we relied on the ad below and took a chance on the seller and his version of working, very clean condition radios. Mr. Linger lied about the cosmetic condition of the radios also. I have the original ad, I have the radios, they don't come close.

FS: I have 2 (qty) RT-1133/PRC-70 manpack tranceivers for sale. Their frequency coverage is 2-80 mhz (continuous) in range and are AM, FM, SSB,
and CW mode capable. I have a handset for each unit. They are in very clean condition with a 9+ original paint. Units have been on the air with
good signal reports. I want $1200 each. If interested call Mike at (979)
693-1461 or e-mail to: gspubl@tca.net

The message is: Buyer beware! Even Mr. Linger says that.

We will continue to attach small warnings to things Mr. Linger is selling via the internet. The person who got the other defective radio has not started on his email campaign yet.
After all this we don't think Mr. Linger is a bad man, were just trying to collect what is due and promised. If put in the same situation, what would you all do? We just want what was promised and will continue attaching to Mr. Lingers FS ads until we collect or are otherwise satisfied. I would like nothing more than to praise Mr. Linger in a public forum for coming through on a promise. Thank you for reading and we hope you see our side.

Hi Ed

Thanks for your response and suggestions.

I have only removed the set covers and as all modules are shielded, I was waiting for ideas before jumping in further. I wonder, as this set is said to be easy to service, whether it could merely be contact problems with removeable circuit boards? I had a hifi set of this vintage with 10 plug in boards and it had heaps of problems with bad contact of the boards with the slots.

If I can find a schematic it would also help.

Regards

Simon

Hi

Just to follow up on my query, it looks as if I have been lucky and bought a self-repairing radio!

After several hours use, the problem Nixie has come good. Maybe the set had been in storage for many years and got a bit damp and use has dried it out?

If anyone knows a source for a schematic, I would still appreciate it.

Source record: 45170

A friend has just informed me that I am being flamed out and I think I should respond. Obviously there are two sides to every story and what has been stated here prior to this response is not only erroneous but also not the full story. He has left out the course of SEVERAL important telephone conversations I had with him shortly after he received the radios I sent him.

I sold Mike two military radio tranceivers (HF) for a substantially reduced price than normal market value because he wanted both tranceivers in a package deal. I had both tranceivers checked out by a technician here before they shipped. When Mike got them he told me they didn't work. I called him and insisted that he return the radios for full refund or repair (by my technician friend). Mike did not want to return them for his money. He knew he had purchased them at a good price and stated he did not want his money back (I should have let it go right there). He also felt that the man I use to fix my stuff wasn't good enough and he didn't have faith that they would be fixed properly. Mike insisted that he wanted them fixed by a guy he knew of that was supposed to be an expert on them and asked if I would split the cost of repair. I informed him that my man could fix them and I didn't want to pay someone else to fix more than what was wrong and give us a "gold plated" bill for repair. Mike insisted on sending the radios to this man anyway and as we left it I said I would pay half of any bill up to $100, simply because I knew my man could repair any problems for about that same price. Half the repairs of $100 cost is $50 and that is all I agreed to pay. When Mike informed me it cost $300 and something dollars for repair I balked at anything over what I said I'd pay. I dragged my feet because I wasn't going to do what he wanted me to. I finally sent him $50 as I originally agreed. Now, get this: He emailed me and told me that the radios still don't work and that they are a bunch of junk. When I asked if they worked after his guy fixed them he informed me that they had worked but then they broke down again and he wasn't going to have them fixed again. I think I have a sour grapes case here but offered to rectify it earlier and have no intention of doing any more. In retrospect, I should have known better. It has always been my policy to return any money to an unsatisfied buyer when it was requested (rarely). I should not have agreed to have someone else fix the radios, if indeed they were in need of repair. I spoke with my technician friend about those particular radios and he informed me they work on 24 volts and if they were powered up by a neophyte at 12 volts that they will likely burn up. I suspect this is what happened in this case. I should never have agreed to have anone but my technician friend work on any radio I sell if something needs repair and the buyer wants to keep the radio

but have it repaired. I have heard horrendous stories about how radios got gold plated inside by technicians running up repair bills.

And get this: serial numbers missing or ground off??? What we have here is a DESPERATE sour grapes case. Funny that this is the first he has mentioned it. He mentions this on the NG but NEVER told me about this accusation. The numbers were on when they left here. I no longer wonder if Mike and/or his technician are playiing games just to try to slander me. Fortunately, I have dealt with many people and have saved quite a few emails from people that were kind enough to let me know how pleased they were with what the got what I shipped them. I hope no one else has to go through this sort of nonsense and will learn from my lesson. Thanks to all who are concerned with these types of transactions. In used equipment transactions it is always BUYER BEWARE and it is up to the seller to accurately describe the equipment as best he can and sell it in working condition (money back guaranteed) or sell it as-is. It is up to the buyer to know what the equipment is, how to use it and check it out (immediately upon arrival) and to ask as many questions as possible to settle in his mind that he knows exactly what he is buying. This fulfilled, the transaction will go smoothly and everyone is happy........

# 1043. WTB: Card Extenders and Manuals for Commercial HF RXen

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-29 16:57:39 UTC
From: mikea@mikea.ath.cx
Message-ID: <7wA58.16553$cA5.2342339738@newssvr16.news.prodigy.com>
Source record: 45171
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.swap

I just got three HF receivers "as-is", with service manuals,
which will make things _MUCH_ easier. They're:
o Debeg E2000,
o ITT-Mackay 3020A, and
o Racal 6217E.

I want to buy operator's manuals for all three, and would like
to buy card extenders for all three, as well. Buying them will
be _much_ nicer than making my own.

All are "as-is" and need work, and the only way to do useful
troubleshooting is with card extenders. I _might_ be talked
into swapping the ITT-Mackay and its manuals for operator
manuals and card extenders for the other two, plus a bit. It
depends on what the extra bit is. A "10" 75A4 or 51J3 would
certainly do. ;=)

I'll be happy to hear from anyone else who has one or more of
these receivers, or experience working on or with them.

Yes, boatanchor folks, these don't have glowbottles, but they're
of the same general era, and you folks know me, and I know you
might have some of these things ratholed.

# 1044. FS: JRC NRD-535

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-29 17:18:53 UTC
From: Michael <michaelt@flash.net>
Message-ID: <1QA58.16571$wY5.2343871613@newssvr16.news.prodigy.com>
Source record: 45172

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions. It is not a "D" model.

$600.00 plus shipping and insurance from zip 76001.

Thanks!

# 1045. Choke Specs

I am trying to find the specs on a choke made by Sola Electric of Chicago in the 1940's. I assume this is the same Sola that made the constant voltage xfmrs. The part number is 742-017. It is a three terminal device with one of the terminals tied to the case ground. Any help would be appreciated.

Source record: 45181

As a receiver for a ham that wants to use it as such, it is worth about $125 to $250 depending on its condition. I have had 4 of them over the last 30 years as a ham operator. The last one I sold at a swap meet about 2 years ago in good condition for $175 because that is how it compares to other available receivers in specifications and performance.

As an antique for an antique collector who wants it as such, it might be worth considerably more. That exorbitant price may make some greedy person happy but it will not make it work any better as a receiver.

I have still seen some of them in fair condition going for under $200 at swap meets but they are getting harder to find at reasonable prices.

Good luck in you hunting.

Nixie clocks have caught on in a big way again.
I built a few as gifts, then sold a bunch of them on epay as well.
Then, it seemed like every grunt with a weller iron was tossing their
home brew hazard on epay. Really scary.

So, I engineered a nixie tube wristwatch...really!

you can see it here: http://www.amug.org/~jthomas/clockpage.html

Like to see more?
An excellent collection of Nixie Clocks designed and built by
different folks can be viewed here:

# 1060. Bad Faith sale of broken PRC-70s?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-30 00:39:33 UTC
From: Mitch <videoambassador@yahoo.com>
Message-ID: <3C574104.C6FC7767@yahoo.com>
Source record: 45188

Starting a new thread

Mitch, the Other Ham adds the following observations to the "sale of the broken PRC-70s" saga (newest remarks highest here):

Telephone conversations are ephemeral, and their contents cannot be used very well to lend substance to our claims of damage or misrepresentation. This cuts both ways for both parties. Nevertheless, here's some facts NOT SPECULATION OR PERSONAL ATTACKS, along with some responses to his arguments, and some questions to think over before deciding to do business with Mr. Linger

1. Mr. Linger did indeed drop his price somewhat during the course of the telephone negotiations. He agreed to sell
at a price he deemed agreeable. So, what of it? He was not forced to do so, and in fact did so willingly. Couldn't have
happend otherwise. Once this agreement is reached, the new price cannot honorably be used in good faith as an
excuse to deliver radios which differed substantially, and in a negative way, from that described. And differ negatively
they did!

2. I was there when the box containing the radios was opened. When it was opened, there were quiet groans of
disappointment at the radio's outward condition. Each radio had seen heavy use, with plenty of wear, the usual
scratches and even day-glo orange letters stenciled onto one unit. Also

there were signs that the radios had been
repainted in some places. At this point, we're well out of the "9+"
out of 10 description category, but we were willing
to compromise if the radios were in good shape electrically. Which they were
not.

3. Looking closer, each radio had a problem with the large 6-pin gold-plated male battery pack connector on the
bottom surface. The connector is hard to come by, and sure enough, some very bad man had tested or applied power
the radios by SOLDERING wires to the damn power pins! WE had to tediously remove blobs of solder from the large
gold pins in order to allow the CORRECT connectors to mate and seat properly to each radio. Mike has been a PRC-70
owner for many years, and actually HAS the rare proper mating connector, along with a good collection of proper
batteries in good working order. Mike and I are also keenly aware of

the radio's self-destructive intolerance for low
battery voltages. In fact, early on during the deal, an e-mail was
sent to Mr. Linger inquiring about the condition of
any battery packs which might come with the radios, including the
operability of the low-voltage cut-out circuit
included in the stock battery packs! Didn't want a bad cut-out switch
in a battery pack to kill a radio! As it turns out,
no battery packs were available....

4. Each radio had serious electrical problems, from blown fuses to
bad modules and so on. We do not have the
hideously expensive factory extender cards or test jigs to properly
check and repair extensive PRC-70 problems. Since
the radios arrived in dead electrical condition, we considered this to
be evidence of bad technical mishandling and
therefore had no faith in the person(s) rendering any technical aid or
report to Mr. Linger. Mr. Linger may in fact be
caught in the middle of this between his tech support and us irritated
customers, in which case it is the tech who
should be held liable in making good for both us buyers and Mr.
Linger.

In any case, had the radios been sent back to Mr. Linger, they no
doubt would have been subject to further repair
and restoration in order for them to come close to the originally
advertised description. Or the description would have had
to change to reflect the radio's true poor condition, with the
necessary drastic reduction in price. After all, there are
fewer buyers for expensive "project" radios versus units that are
described as"in very clean condition with a 9+
original paint. Units have been on the air with good signal reports".

As it is, don't you think that if the original posting describing
these radios for sale had said something about the
true condition of the radios, along with an admonition that the sale
was "as is" that there'd no cause for making a
fuss? Otherwise why would Mr. Linger agree in writing to pay for half
the repair bill generated by a PRC-70 specialist?
When I say specialist, I mean a highly competent someone, Mr. Karlow,
who
has more '70s stacked up at his shop than
anyone else except for the military itself when they were in active
use. This is not someone who solders directly to the mating surfaces of
scarce
gold-pinned power connectors!

5. We certainly did not grind off the serial numbers. Why would we,
and risk the suspicion of the neighborhood
constable? We bought them after all, and did not steal them, as the
cancelled cheque will clearly show. We have lots
of friends in law enforcement, many of whom have an interest in radios

like us. Now we were faced with having to
explain the missing numbers, to our mutual discomfort, if indeed we
choose now to even show the radios to them and so put
them on the spot!
No sir, the numbers were ground off when they came out of the box.
Now,
it may be true that Mr. Linger may have not seen
this "when they left here", where ever "here" is, and whomever handled
the radios in between, but that's not how they
arrived when we opened the box.

6. One has to wonder what the actual motive is when radios are
described as being "in very clean condition with a 9+
original paint. Units have been on the air with good signal reports",
but are as a matter of fact in vastly different condition upon
receipt. We ourselves took the time, trouble and money shipping the
radios back and forth to Mr. Karlow, in order to get
them into workable condition. Mr. Linger agreed to pay for half of this
cost, and we would eat the shipping and insurance.

We have got, and may end up posting the emails we received to
substantiate all of the repair promise claims we've made. But as of now,
nearly a year has gone by
along with Mr. Linger's cluster of promises of adhering to
earlier agreements, in writing, of covering half of the repair cost.
And curiously, as a response, what we have received has amounted to
little but
brag and abuse.

Ultimately, all we ask is that Mr. Linger to live up to his stated
written positions. Either deliver the radios in the stated
condition as promised, or help cover the repair bills to get them closer
to their advertised condition, as promised.

Doubtless Mr. Linger has many happy customers, and that's fine.
Which makes our situation that much more frustrating for all concerned.
We haven't made any of
this up, and as customers we don't really want to have to do this as a
usegroup soap opera,
or otherwise make a career out of it. But after about a year, what
options do we have
left? If our effort of telling it like it is saves just one other buyer
from
this kind of aggravation, our mission will have been accomplished.
It's a shame though, that this mission had to be embarked upon in the
first place.

Cheers, and thanks for reading our "little-guy" side of it.

Mitch, the Other Ham.

# # # # # # # #

KM6AB replies:

Mr. Linger needs to get his facts straight, we are not making this up for fun.
Yes, I am a little greedy and would rather have the radios fixed than get the refund which was originally offered. We waited a long time to get them and were very frustrated. Our money was not broken nor defective and we wanted to salvage something out of this. So much for hindsight, at least we saved some other amateurs the pain.
Mr. Linger agreed to pay for half the repair AFTER we had a three hundred and something dollar estimate. I have ALL the email correspondence and the dates don't lie. Before we got the estimate Mr. Linger agreed to pay up to $100 out of his pocket which would cover half of a $200 repair bill. I have this in writing also. Why did he only send $50 after nearly a year? I have to split this with the other owner of the other defective radio from Mr. Linger. Remember, there are two of us that are trying to collect, I am not making this up myself.
The serial #s were absolutely ground off each radio tag when they came out of the box from Mr. Linger. The tags areriveted on and I would be happy to send a pic prove it. I remember not mentioning this to Mr. Linger because he sounded very hot headed and accusatory on the phone and we didn't want to add to his seemingly bad day. I just wanted to get the radios working at this point and not burden him with more bad news. Wouldn't you think Mr. Linger would notice the missing S/N's as he was "on the air with good signal reports"?
I have owned this model of radio for about 10yrs and am very intimate with its workings, do's and don'ts. I have the correct batteries to power them with. I relayed this to Mr. Linger before we purchased them and he still likes to call us "neophytes" and attack our technical background. Mr. Linger does not have a clue what I do for a living. I don't go around telling people that Mr. Linger is a dud in the printing business or what ever he does for a living. But I would like to know who used very bad judgment soldering wires to the precious gold battery contacts before the radios got here.....
On the phone Mr. Linger admitted that his tech might have used a power supply with inadequate current when checking the radios, which can easily damage the radio's power supply in this model if the voltage drops below 19v.
This is a very well known thing to avoid on a PRC-70 and Mr. Linger was not aware of this until I told him. I could tell he didn't believe me on the phone and that he thought I was making this up. There were many other problems that go way beyond what the low voltage problem can damage. These radios could not possibly have worked when shipped.

The radios were sent to Jim Karlow K8TUR for evaluation and repair. Jim is the only guy who specializes in repairing this model. All the mil surplus dealers on this earth send them to Mr. Karlow because he is simply the best and most honest in the business. Mr. Karlow does not "gold plate" the insides and run up the repair bill. Would you want to send the radios back to Mr. Linger and the same guy who may have damaged them in the first place?
After Mr. Linger agreed to pay for half the repair (why not all?) he STROKED us for nearly a year with " I am having a little trouble with taxes" and "what is your mailing address again?" (I have all the emails) all while he was selling many thousands of dollars of equipment on these news groups during the same time. Just do a news group Google search on his email address. Why not just tell me your going to stiff us rather than lie and hope we will go away?
My intent here is to share an unfortunate tale and hope others don't get pushed around via long distance emails. I am sure that if we initially visited Mr. Linger in person and saw the radios, we would have smiled and said thanks but we'll pass on these. Instead we relied on the ad below and took a chance on the seller and his version of working, very clean condition radios. Mr. Linger lied about the cosmetic condition of the radios also. I have the original ad, I have the radios, they don't come close.

FS: I have 2 (qty) RT-1133/PRC-70 manpack tranceivers for sale. Their frequency coverage is 2-80 mhz (continuous) in range and are AM, FM, SSB, and CW mode capable. I have a handset for each unit. They are in very clean condition with a 9+ original paint. Units have been on the air with good signal reports. I want $1200 each. If interested call Mike at (979) 693-1461 or e-mail to: gspubl@tca.net

The message is: Buyer beware! Even Mr. Linger says that.

We will continue to attach small warnings to things Mr. Linger is selling via the internet. The person who got the other defective radio has not started on his email campaign yet. After all this we don't think Mr. Linger is a bad man, were just trying to collect what is due and promised. If put in the same situation, what would you all do? We just want what was promised and will continue attaching to Mr. Lingers FS ads until we collect or are otherwise satisfied. I would like nothing more than to praise Mr. Linger in a public forum for coming through on a promise. Thank you for reading and we hope you see our side.

# # # #

Mr. Linger replies:

A friend has just informed me that I am being flamed out and I think I should respond. Obviously there are two sides to every story and what has been stated here prior to this response is not only erroneous but also not the full story. He has left out the course of SEVERALimportant telephone conversations I had with him shortly after hereceived the radios I sent him.

I sold Mike two military radio tranceivers (HF) for a substantially reduced price than normal market value because he wanted both tranceivers in a package deal. I had both tranceivers checked out by a technician here before they shipped. When Mike got them he told me they didn't work. I called him and insisted that he return the radios for full refund or repair (by my technician friend). Mike did not
want to return them for his money. He knew he had purchased them at a good price and stated he did not want his money back (I should have let it go right there). He also felt that the man I use to fix my stuff wasn't good enough and he didn't have faith that they would be fixed properly. Mike insisted that he wanted them fixed by a guy he knew of that was supposed to be an expert on them and asked if I would split the cost of repair. I informed him that my man could fix them
and I didn't want to pay someone else to fix more than what was wrong and give us a "gold plated" bill for repair. Mike insisted on sending the radios to this man anyway and as we left it I said I would pay
half of any bill up to $100, simply because I knew my man could repair any problems for about that same price. Half the repairs of $100

cost is $50 and that is all I agreed to pay. When Mike informed me it cost $300 and something dollars for repair I balked at anything over what
I said I'd pay. I dragged my feet because I wasn't going to do what he wanted me to. I finally sent him $50 as I originally agreed. Now, get this: He emailed me and told me that the radios still don't work and that they are a bunch of junk. When I asked if they worked after his guy fixed them he informed me that they had worked but then they
broke down again and he wasn't going to have them fixed again. I think I have a sour grapes case here but offered to rectify it earlier and have no intention of doing any more. In retrospect, I should
have known better. It has always been my policy to return any money to an unsatisfied buyer when it was requested (rarely). I should not have agreed to have someone else fix the radios, if indeed they were in need of repair. I spoke with my technician friend about those particular radios and he informed me they work on 24 volts and if they were powered up by a neophyte at 12 volts that they will likely

burn
up. I suspect this is what happened in this case. I should never
have agreed to have anone but my technician friend work on any radio
I sell if something needs repair and the buyer wants to keep the radio
but have it repaired. I have heard horrendous stories about how
radios got gold plated inside by technicians running up repair
bills.

And get this: serial numbers missing or ground off??? What we have
here is a DESPERATE sour grapes case. Funny that this is the first
he has mentioned it. He mentions this on the NG but NEVER told me
about this accusation. The numbers were on when they left here. I no
longer wonder if Mike and/or his technician are playiing games just
to try to slander me. Fortunately, I have dealt with many people and
have saved quite a few emails from people that were kind enough to
let me know how pleased they were with what the got what I shipped them.

I hope no one else has to go through this sort of nonsense and will
learn from my lesson. Thanks to all who are concerned with these
types of transactions. In used equipment transactions it is always
BUYER BEWARE and it is up to the seller to accurately describe the
equipment as best he can and sell it in working condition (money
back guaranteed) or sell it as-is. It is up to the buyer to know what
the equipment is, how to use it and check it out (immediately upon
arrival) and to ask as many questions as possible to settle in his
mind that he knows exactly what he is buying. This fulfilled, the
transaction will go smoothly and everyone is happy........

Not for e-bay.
Those with unmarked panels, cabinets, chassis, with Halllicrafters tubes may
go for twce that. (or more) Last Summer a beautiful 115 went for $375 with
buy-it-now.

The average prices have been coming down over the last year as there just
isn't as much ready cash floating around as there was *before* the dot com
bust.

But...having been up there, the really good examples of the SX-115 will
probably never come back to where you and I will call them reasonable.

I'm working with a group of hams who are working on REAL boatanchors - restoring the 30's vintage radios aboard the USS North Carolina. We had our first QSO today from the ship using its original equipment in 57 years. We have one of the CW transmitters working, but need 801, 802 and/or 803 military style tubes for the remaining ones.

If any of you are collectors or know of a source for these ancient beasts please let me know. I promise to give them a good home in a prominent piece of history.

For the whole story on our restoration you can follow the link: http://www.ac4rc.org/battleship.html

Thanks!

On the front cover of the owner's manual for a late 1970s Hallicrafters HCM-270 CB radio, it states "Hallicrafters Company, Grand Prairie, Texas". I was not aware that Hallicrafters ever had a location in Texas. I thought they were in New York. Anyone have info on this?

Anyone have info on 1970s Hallicrafters CB radios? Was this some kind of "comeback" attempt, or did someone assume the name, or what?

Nearly all Hallicrafters radios were made in Chicago. Maybe you're thinking of Hammarlund, which was in New York.

There's a short history of the Hallicrafters company at:

http://ww1.photomicrographics.com/webpages2/pmi/dd1/history.htm

As stated by Chuck Dachis in his book Northrop was producing para-military eqip. much of it in El Paso, TX. For all practical purposes the last Ham radio item produced by the Northrop/Hallicrafters was the FPM-300 in 1972, and a few accessories through 1974. There were also some CB units and AM/FM sets of Japanese origin relesed under Hallicrafters name. At this point Northrop/Hallicrafters turned over to its partner, Wilcox. Then on On Dec 4,1975 Wilcox sold the Co. to Braker Corp of Dallas TX and they moved the supplies and biz to Grand Praire, TX . They set up shop with some former Hallicrafters employees of the late 60s and released a few more CB and other Japanese and Tiawan produced radios threw them. Then Braker went belly up around 1980. Then other aquired the Hallicrafters name.

Dean, I don`t have the answer to your question about the Hallicrafters HCM-270 I did find a listing for the HCM-260 which is a Japanese import CB in 1977 ..I guess the Grand Prairie address is the importers address,, and as you know the Japanese manufacturers put whatever name you wanted on their products if you bought the right number of units.. also I believe Hallicrafters was still building some FM sets and portable units like military stuff at that time..If you get the info on good authority please post it here for all to see.. (we have talked before about Raytheon) Harold W4PQW

I have for sale a very nice condition JRC NRD-535 receiver with stock filters. The NRD-535 tunes 100 - 30,000 kHz in modes AM, SSB, CW, FAX, FM and RTTY.This receiver has 200 memory locations which store frequency, mode, AGC, ATT and IF filter selection for scanning. With appropriate software the RS-232 interface allows computer control of the radio and memory functions.

$600.00 plus shipping and insurance from zip 76001. Domestic shipping ONLY!

Thanks!

About the only thing I know is that Hallicrafters was once associated
with Radio Shack, but that was back when RS was based in Boston, not
Fort Worth.

I've not seen a decent SP-600 in good condition for less that about $350 for the past 5 years, at least here on the East Coast. You have an Erols address, so maybe you're out here, too! Last year at Timonium I got one (before the sun came up) for $400 (asking was $450). It was a civilian model with the original case... very hard to find. I sold my JX-21 military rack-mount unit to a co-worker for $300, as a favor. If you are located in the mid-Atlantic, try the Timonium Hamfests in April and/or the second Tim. in July. You may luck out. Regards de Jeep/K3HVG (Frederick)

# 1091. Question About Ebay Auction Price Run Ups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-01-30 22:46:22 UTC
From: The_AntiArt <The_AntiArt@Hoax.Land>
Message-ID: <09CD27E8DA8B7069.7B535C94CA366E5E.1BF996E6429CE90F@lp.airnews.net>
Source record: 45069

I have used Ebay in the past, and this question is
not intended to offend Ebay fans.

I have seen occasions where prices of certain items
seem to have risen to levels far beyond the market
average price.

I know that some people will say that this is just the
"free enterprise system" at work, but even at traditional
auctions where you can physically examine the items
and live bidding occurs, I rarely see the kind of price
run ups like on Ebay.

I was wondering if anyone has ever documented evidence
that Ebay may be possibly "shilling" prices on some items?

Most of the glory years of Hallicrafter's were spent in the Chicago area. As I remember in the 50's National was in Malden, MA, Collins in Cedar Rapids[where Rockwell Collins has a significant presence today] Hammarlund was in Mars Hill, NC [I thought they originally were in NY.] Johnson Viking was in Waseca, MN, Globe King in Council Bluffs,IA [and associated with World Radio Store(Leo Meyerson). There was a small pioneering SSB firm called Lakeshore which was making SSB gear before any on the biggies...it was in my hometown of Manitowoc, WI. Their chief engineer was one of my hamming mentors when I was a kid, just licensed in 1956 at age 13. He later went with Gonset.

You mean by setting up fake robo-bidders that go around automatically
bidding on SX-88s and 115s and unbuilt kits? A scheme like that
wouldn't work because they might win sometimes.

Folks
I am based in London, England and have just started restoring a
Hallicrafters S53A.
After diagnosis, the rectifier tube - a 5Y3GT - seems dud. Heater is OK,
voltage in is OK but there's no voltage out.
I have the set running well (for now) on an SS jury-rig using a pair of
IN4007's.
Where can I get a new tube? Can someone please point me in the right
direction with URL's or offer me one at a reasonable price?

Thanks in advance.

So what? Then they'd just not respond, get badmouthed, and re-register as
a different user. For some reason there are a lot of people out there who
violently dislike eBay for no real reason except its success I guess.

True, but if there is collusion between a bidder and the seller in order to run up prices, the colluding bidder wouldn't be expected to buy the item. The seller would just wait a couple of weeks, say the winning "bidder" was a deadbeat, and re-list the item. Then they could do it again, with the colluding bidder using another name.

I have no idea if this ever happens, but it could.

Thankyou very much. Actually that seems not too bad compared to the
rave reviews I've seen out there on the net. Maybe there's hope yet.<grin>

Yes, we are local. I'm a member of the Vienna Wireless Society which is
hosting its' Winterfest this march 3rd, 2002. Perhaps we'll run into each
other. As for Timonium, maybe it's for the best that I don't know fer sure
that there's a classic BA with my name on it waiting for me in March as I'm
still hot for another amp first. July gives some time to work to make more
money to throw at old radios to,.... I've already e-mailed Joel at RF Connection
and he's assured me he's gonna have a full 1000' spool of 9913 there
( see an earlier thread by me with Sam's reply I mistakenly flamed about).

73 de KG4JBM/ Andrew

Owner of '97 TJ Sahara, Moss Green with Spice Soft-top, 30"
Wheels, and H-D susp. Was about to go the full custom route when
I got into Ham Radio and all my money vanished ever since.

Wow! I'm surprised at all the basically supportive comments for eBay.
I'm a big supporter of Free Enterprise too, but then unlike some I didn't
have any money in Enron, Lucky me.

I find it hard to believe they would run up prices as it would leak sooner
or later and that would be the end of that plus some. Virtually everything
electronic there is sold " As Is" ,which may be cautionary but is hardly a
remedy for fraud, snake-oil, and deception. You can say nobody forces you
to bid, but if everything is "as-is" isn't that a clue there's a problem
somewhere? Capitalism is a great system, it shouldn't require "faith" or
cloaked identity, or remoteness, etc to make it work.

I've never spent more than 25.00 US there. I may spend more some day,
but only because the items wanted aren't available elsewhere in a more secure
way. Has there ever been any real close scrutiny of such e-markets ? What was
the rate of customer satisfaction ? How many felt de-frauded ? Any major cases
that earned serious jail-time?

I have done more then half a thousand deals on Ebay,
both buying and selling, over the last four years.

I can count the "bad deals" on the fingers of one hand.

Doing business on Ebay has restored my faith in my fellow human being.
Most of them truly want to "do the right thing."
When they don't "do the right thing,"
it's far more likely to be an honest mistake then a crooked deal.
There certainly are crooks and one must watch for them,
but they are rare.
It's just that, when crooks show up, they get all the attention.

I rather doubt that much of it goes on: there are a lot of collectors out there willing to pay the prices.
Ebay charges to list an item, then you wait a week to have it send, and then if it isn't sold (or sold to a fake bidder), you have to relist it.

I recommend Ebay sales to widows of collectors who have to dispose of valuable radios...the local hams or shopowners will bid really low as the widow is in distress and has no alternative, and doesn't know where to turn to dispose of something she knows nothing about or despises.

with Ebay you stand the best chance of getting market price

I actually worked in the Grand Prairie Plant then, dam what a bunch of screw ups, they seamed to have some connection with Peterson Scanners also, one of the first scanners on the market. They keep building some old gear for the military and the only engineer they had tried to develop a CB ,and keep having problems with the modulator circuit, He was a Ass hole from the north east and hated Texas. They tried to get into the fire alarm, antenna market, and what ever else came in.

My $0.02 worth on this topic:

I have purchased 4 of these over about a 10 year period. Cheapest was about $35, most expensive about $200. ALL needed work; cheapest needed more work. The nice thing about them is that they have great audio and are nice band cruisers. They are difficult to work on (at least for me).

Just my opinion.

The Hallicrafters Company was bought out by Braker Corporation of Dallas, Texas in 1975 and the whole company was moved to Grand Prairie, Texas. They made a few CB's and put the Hallicrafters name on various portable Japanese radios. The Braker Corp. went belly up in 1980, and the Great name and legacy of Hallicrafters along with it. I hope this sheds a little light for you.

> Dave

That happens sometimes. I've seen it and reported instances of it.
Seller and bidder can be the same person. If you suspect such activity
you can usually look back at previous auctions (a bit more difficult
these days since they don't archive as much as before) and look for a
trend. But bear in mind that a fella selling certain items, say
boatanchors, may have the same people bidding on many of his auctions
and that doesn't imply shilling.
There's alot of sharp folks looking at these offerings and the crooks
don't last long. ebay will yank their account in a heartbeat for
shilling. Sure they can start up a new account but thats why you
shouldn't send $1500 to a guy with (0) feedback and 'shades'.
All that being said, shilling ain't gonna make a $500 radio sell for
$1500.

Usually not! :-0

My experiences with eBay have been positive. A couple of times I've made some stupid bids, but that's my own problem, not eBay's. All the sellers have been very prompt and conscientious.

eBay is just a place where human nature in all of its positive and negative aspects is on display.

> Still think $1,000 is a more appropriate price.

In a free market, the "appropriate price" is set
with each individual transaction. It is by definition
that price to which one seller and one buyer freely agree
for a certain commodity offered at a certain time.

The $1675 price is no guarantee of a price for the next sale.
It says only that one person was willing to pay $1650
and another was willing to pay some amount more for the radio
at that specific time.
At some other time, the buyers may have more or less money to offer.
The price may well stop at $1000, or go to $2000.
Both buyer and seller agree to this price fluctuation risk
when they enter the transaction.

I occasionally sell a certain type military radio.
One week, a rare variety will sell for $25 while
a set common as the sands of the sea will sell for $125.
Then next week, it will reverse.
I've tried to figure out what causes this.
Checking which way the wind is blowing
seems to work as well as anything ;-).

Adrian: I also have an S53A, last time I tried it in year 2000 it needed attention!
You probably want to keep yours as original as possible? But, as you probably aware, there is a way of strapping the socket below chassis so that any of the common 5 volt rectifiers will work, provided they will physically fit. So that could be done until you get an actual replacement 5Y3GT? For example a 5Z4 will work.
One word of caution! If you use a 'metal' rectifier tube instead of a glass-tube type you may find that pin one (1) the metal shield, is used below chassis as a HT/B+ tie point. It was/is in mine and the only quick replacement I had was a metal JAN-5Z4 and ..... OUCH! Also banged my fingers on the metal case pulling them out!
Also as you know the B+ will come on full blast right away with solid state rectifiers before the receiver's tubes start conducting; that extra voltage MAY be a bit rough on old electrolytics? Also those surge current resistors! May be OK. There may be enough limiting resistance in the smoothing choke etc. in face of the lower voltage drop across the diodes.
Good luck with your project. Terry.

From: chickenhawk <chickenhawk@ameritech.net>
Message-ID: <ald68.2074$HL4.483125@newssrv26.news.prodigy.com>
Source record: 45114

I, too, had a problem with focus on the SB610 I built new many years ago. My pot didn't hiss and die like yours, but I couldn't get the best focus with the pot turned all the way to cw or ccw (I forget which). I decided to put a series resistor in line with the pot, something like 330K or 470K as I recall, to get the best focus to again be in the center of the pot's rotation.

I am not sure if this was a power supply anomoly, or the pot or CRT aging that did this. Just remember, the focus on an SB610 is kind of lousy anyway...the center of the trace or display will be sharp and the edges fuzzy once you get about 1" either side of center.

I don't know of any more rugged replacement than the standard 1MOhm pot, either.

Hope this helps.

Yes, but the Osterman book shows three different New York City mailing addresses from 1941 to 1966. The Mars Hill address is shown from 1968 to 1970. Anyway, the original poster wondered if Hallicrafters radios were made in New York. Well, Hammarlund starts with an "H" and started in New York, so maybe that's the connection.

So how did Hammarlund end up in Mars Hill?

Actual price is easy. Appropriate price is subjective. You can have an
opinion of the value but the market defines it.

I think people like that should find another hobby or come to grips with the realization that they're not going to get all the "collectable" radios out there; probably because they got into the hobby at too late a time or that particular radio maybe wasn't available in their area.

Am I guilty of dreaming about finding a (semi) working, fixable Philco 90 in a Dumpster or a Zenith Strat for $80 in a thrift-store? You BET!

But I have come to terms with the fact that I'm NOT going to find either of those like that nowadays, with Ebay and all those books. And I'm certainly not going to get pissed and smash up my computer monitor because someone surpassed my $20 bid on a 1920-something Atwater Kent. I would be a fool to do so.

I'm 26 and got into the hobby at the age of 15. Back then, the only easily-available sets were what I called "rejects" -- little plastic clock radios and cheap Gen. Electric and Panasonic table units from the 1960s and 1970s and a few portables (AA-5s and their solid-state versions).

The 1920 - to -1950 vintage sets were pretty much all spoken for and I couldn't afford the antique-store prices that these guys commanded.

I like them, they're (still) cheap and easy to fix (for someone who right now doesn't have much free time on his hands). I (and most of us here) don't collect as an investment, but for the fun of all these neat old things and getting them to play again.

Well, I did get two Zenith Transoceanics for free some years back (one was a reject from an antique store -- it didn't work, the lady said, do you want it? And the other one - a Royal 7000 was a gift from my uncle - is a treasure I cherish to this day), but that's an exception and I just happened to be very very VERY lucky.

Sure, even these cheep-n-cheerful little guys are now getting harder to find (what with people putting them on E-bay instead of just chucking them in the donation box of a Goodwill store), but hey....maybe that's more of an incentive to fix up the ones still waiting repair.

Be happy with what you already have. And if you want to make money off your collecting....who knows....even the little "rejects" might become more desireable 10-20 years from now.

Peace

Sven

There's a Airmail Letter Post rate that allows small packets that goes
for about 7.00 and will arrive in 4-5 days.

Sure. Take for example the buyer who makes the transaction and later finds he was 'shilled' by the seller. Then the question becomes how much does it cost to go after the guy legally...very likely he's in another state, etc.
I don't know the legality of 'attempting to shill' since there is no damage involved. A knuckle sandwich might be the best remedy :-)
This happens at live auctions as often as it does ebay. Maybe there are some laws specific to such venues but that sounds like a state/local issue.

Looking for a back-up SB-220.
Condx not critical as long as your asking price fairly reflects that.

Would like to know this about your amplifer:

(1) How long have you had it?
(2) What tubes are in it?
(3) How old are the tubes?
(4) What kind of output on 40m & 10m?
(5) What drive power, grid- and plate-current at these output measurements?
(6) With or without ORIGINAL manuals?
(7) What cosmetic shape?
(8) What does it NEED to be 100% functional at full output?

Tnx!

In my non-lawerly opinion it's illegal, but I doubt much effort is put into investigating these cases, considering the generally low dollar amounts and likely jurisdictional problems. Although I've heard the FBI may start taking some interest. Your best defense is never bidding more than what you think something is worth.

This often raises the B+ a bunch of volts, straining the transformer and
other parts. I'd quickly add a 20-watt resistor in series, around 200-500
ohms,
or whatever it takes to bring the B+ down.

Hi group -

need one or two 4CX350F/8322

or

4CX250F/8621

for my NAG144XL PA. New or used but good.

Due to taxes, import duties and all kinds of bureaucratic mayhem over here, I would prefer to get it from inside EU, but could consider US source if price is right.

This amp is a low-budget (no-budget) 144>50MHz conversion project, so please be human when pricing those tubes :-)

Suggestions, please? Please email me at sm7scj@qsl.net

Cheers /Rick SM7SCJ

Dave Moorman wrote:

> The market doesn't define my opinion.

Your opinion of price is only relevant if it coincides with
that of a seller. I can say that an SX-115 is worth 72 cents
in my opinion, but that opinion has no bearing on
anything if an SX-115 cannot be purchased or sold at that price.
If it does sell at 72 cents, then it that *is* the market
at that time, for that radio.
If it does not, then you are not "in the market"
and that opinion of value is irrelevant.

Dave S.

Oh, come on, guys. Get a life!

The value of any item is the price at which both seller and buyer are happy. Period. The rest of us don't have to like that price. Yes, I've been sniped by a last-second bidder any number of times. I have also sniped others frequently on items I REALLY wanted by placing a bid of the highest $$ I was willing to pay, and placing it within the last 10 seconds. Almost always, I get it for far less than my maximum bid. That's the way the game is played.

Some folks are just plain stupid and willing to pay two or three times the cost of a new item, when the item is still available new. I got caught in that trap on a book I was "certain" was out of print. I paid $21 plus postage, then found it's available readily for $10.00 plus postage. I won't get caught again.

I don't know of anyone who has been "schilled" and bet you can't find proof of one either. You don't like the game, you don't have to play.

The diffference is that Ebay is worldwide, while a traditional auction is limited by geography and interest. It's very easy for megabuck collectors from around the world to dial in to Ebay and search for specific items of interest that they want very badly. When more than one such person wants the same item, the sky's the limit. If the same items happen to surface at a poorly advertised traditional auction in a small town, they might go for peanuts . . . or even go unsold.

I'm not sure it's wise to look at the highest price ever paid on Ebay for an item and consider that the new "market price." For high-buck things, that might only mean there are two people on Planet Earth willing to pay that amount.

Phil

The fact the radios were not close to what were advertised and that
Mr. Linger did offer to take them back and many of the other things that

transpired are not the outstanding issue. Those items were mutually
agreed on and are in the past.
We only want Mr. Linger to pay the money promised in writing by Mr.
Linger for reimbursement of repairs for the defective radios. We are not

making the numbers up. I have the emails from Mr. Linger stating he will

pay for half the repair of the radios, after the estimate was received
and relayed to Mr. Linger. Even after I recently sent Mr. Linger a copy
of his own email stating this he disputes it.
Could it be that Mr. Linger never intended to pay, even at the time
he stated so in writing? Does Mike Linger think we had another radio
transaction gone bad from another Mike Linger of College Station Texas?
Is there two of you and we have made a mistake? Are the happy customers
you boast about actually from that other Mike Linger of College Station
Texas?
All we want from this Mike Linger of College Station Texas is to
receive the balance of what is owed and mutually agreed upon. The deal
will then and only then be complete at which time we will post happy
happy praises for you.
Until then, I would hope that anyone about to make an internet
purchase from Mike Linger of College Station Texas (the seemingly bad
one of the two?) be aware and bear this situation in mind. Meanwhile we
will attach these facts and warnings to all FS and FA items advertised
by Mike Linger of College Station Texas until the sun burns out or we
are reimbursed. This includes all alias and future email addresses of
Mr. Linger.
All we want is what was promised.

Message-ID: <3C5A1508.5CDF6C88@pacbell.net>
Source record: 45007

The fact the radios were not close to what were advertised and that
Mr. Linger did offer to take them back and many of the other things that

transpired are not the outstanding issue. Those items were mutually
agreed on and are in the past.
We only want Mr. Linger to pay the money promised in writing by Mr.
Linger for reimbursement of repairs for the defective radios. We are not

making the numbers up. I have the emails from Mr. Linger stating he will

pay for half the repair of the radios, after the estimate was received
and relayed to Mr. Linger. Even after I recently sent Mr. Linger a copy
of his own email stating this he disputes it.
Could it be that Mr. Linger never intended to pay, even at the time
he stated so in writing? Does Mike Linger think we had another radio
transaction gone bad from another Mike Linger of College Station Texas?
Is there two of you and we have made a mistake? Are the happy customers
you boast about actually from that other Mike Linger of College Station
Texas?
All we want from this Mike Linger of College Station Texas is to
receive the balance of what is owed and mutually agreed upon. The deal
will then and only then be complete at which time we will post happy
happy praises for you.
Until then, I would hope that anyone about to make an internet
purchase from Mike Linger of College Station Texas (the seemingly bad
one of the two?) be aware and bear this situation in mind. Meanwhile we
will attach these facts and warnings to all FS and FA items advertised
by Mike Linger of College Station Texas until the sun burns out or we
are reimbursed. This includes all alias and future email addresses of
Mr. Linger.
All we want is what was promised.

# 1180. SX-101 RF Amp Mod

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-01 04:19:51 UTC
From: Dave Moorman <dmoorman4@NOSPAMattbi.com>
Message-ID: <dmoorman4-CEC5CB.22195431012002@netnews.attbi.com>
Source record: 45008

I see some SX-101's advertised as having the 6EH7 RF amp modification,
but searching the Web uncovers very little information about it. None
as a matter of fact. there must be more to this than switching tubes.
Anyone done it?

Thanks,

Dave

I sure wish someone would tell this
to all the sellers at antique malls.
They've decided Ebay prices are what they should charge.
I saw three very nice 1930s Zenith cathedrals today.
They were priced $1300, $1600 and $2000
after having been marked down.
I don't think anyone in Podunk, Texas
is going to walk into that mall
and plunk down two grand anytime soon.
Same for all the old radios in the place-
prices straight off Ebay's highest bid list.

Pricing will vary according to
the character and scope of a market.
The online market is vast and many buyers have "deep pockets."
The walk-in buyer market is small and cannot turn as much capital.
It is futile to expect equal pricing in such disparate markets.
Dave S.

Glad you have a sense of humor, David.

Even if you define relevance very narrowly in market terms, wouldn't
opinions of those who don't buy be just as important as those of buyers?

# 1189. They've already been laid...but will they get paid? Broken PRC-70 blues..

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-01 07:18:27 UTC
From: Mitch <videoambassador@yahoo.com>
Message-ID: <3C5A4187.27DC6081@yahoo.com>
Source record: 45017

Starting another new thread...

Mitch, the owner of The Other Broken PRC-70 Ham replies:

Yeah, the transaction happened almost a year ago, and the promises Mr. Linger made happened shortly after that. So, what of it? We're not asking for reparations for slaverey, or for payment of principal plus interest due for building the pyramids here. Mitch and Mike don't have last names of Jackson or Sharpton. On the contrary, don't you dear readers think that graciously waiting for so long a time for Mr. Linger to own up to his written agreements is rather an act of kindness and patience rather than hostility? Sure, we all run a little low on cash once in a while. Of course a seller can accidently mis-place the return mailing address. A few times. How many times CAN the dog eat your homework? We're not done counting yet; still finding out...

Put yourself in our shoes, and see if, with the benefit of the hindsight

afforded by Mr. Linger's chronic promise-breaking habits, this is what you'd be willing to risk:

Imagine the sceneario where we had simply and promptly put the PRC-70s back in the box and sent them back to Texas. Mr. Linger would would then have been in the position to claim that we had damaged the radios, both mechanically and electrically, and we therefore would be liable for

the cost of restoring them to the "as advertised" condition. And he would have had our hard-earned money with which to pay for fixing damage

which we did not cause. Who is going to take the time and bear the expense of traveling the 3000 miles round trip to make this situation right? Alternatively, what Texas lawyer, hired at a distance would want

take a case this tiny?

Point is, Mr. Linger's business practice here seems to be one of taking on a defensive posture instead of learning from errors, making things right and getting on with the fun. The amount we're arguing over may not be that great, but it's the idea of making your customers pay for your own haste and ignorance (NOT stupidity; these radios are a mine field for the uninformed, as we learned many years ago). And then denying it or hiding behind expendable staffers! That is especially galling.

Would not a better way to resolve this be to reconcile one's self to doing what you said you promised you'd do, kick the tech department in the giblets or wherever, and resume selling gear, as has been happening

for the past year, for good money on the net? Meanwhile, get the poor tech the info necessary to properly test and assess the more expensive pieces, especially if they're to be sold as being clean-condition tested

gear.

And after all, Mr. Linger could have said "No" instead of yes in his writing about covering his half of the added repair cost at the beginning of the repair process. Or he could have sent a checque for the

original sale amount plus repair and shipping costs and just bought them

back in greatly improved, actual working condition. Instead, we find ourselves forced to publicize our plight. Ask yourselves if you'd like to risk being in our situation, writing these cautionary tales of woe, with satisfaction oh so near, yet seemingly so far off..

Thanks for reading, along with your many notes of encouragement. Who knows, might have to open a real P.O. box for fan mail.;^)

Cheers! Mitch

# # # #

Mr. Linger replies:

FortunatelyI found my picture files of the JPG pictures I sent Mike showing the physical condition of PRC-70's he ended up buying. If anyone would like to see them I'd be glad to send them and then you can judge for yourself if he has misrepresented the condition or if I am in error. Regardless of my description, the pictures speak for themselves and other than some scratches on the handles they look quite nice, not what Mike says they looked like. He made his purchase judgement on physical condition from these pictures.

As to the reason I sent $50 for my half of the repairr, I suggest that he take a basic course in mathmatics. I told him I would pay half of the repair bill up to $100. Half of a $100 repair bill is $50, not $100. I did NOT say I would contribute $100 to the repair bill. Get it straight, Mike.

I wish to appologize to all who have taken the pain to read this garbage put out by two parties in disagreement over a transaction that happenned over a year ago. This transaction will never be solved. I would like to say that I would go even further and cover half of the actual money he really did spend, or even cover all of it but I don't think it would help him get over his problem. It would set a precedent that others wouldn't want to follow. If you agree to return all the money as I did then that should be the model to follow. The last thing I would ever do is intentionally screw anyone. I have been doing the radio trading thing as a hobby to play with different radios for 10+ years and have sold and traded stuff for along time. Does it make any sense to anyone why I would all of a sudden take a bunch of money from a guy and then send him junk radios so I would have to have them repaired or return his money? Of course not. You be the judge.

Just a thought - the only time I have been able to afford radios on ebay is where they have been mis-described with no photo. In this case an email to the vendor to see if it is what I think it might be and bingo - you win sometimes. I find local house/business clearance auctions and collector contacts far far better value.

Hi Jim,

Not restoring... building! I'm building a tube-type T/R switch
for full break-in operation with my BA gear. It's from the '68
edition of ARRL's "Single Sideband for the Radio Amateur".

73,

# 1197. FS: Drake gear

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-01 14:04:40 UTC
From: Dave K4DLJ <k4dlj@bellsouth.net>
Message-ID: <3C5AA077.86647AFA@bellsouth.net>
Source record: 45025

Have for sale the following:
Drake - DC3 mobile power supply for TR3-TR4/C etc. in good physical condition. No cable. $40.00
Drake- TR-22 2 meter portable fm xcvr. with original carry case, power cord, microphone and good batteries. Unit is in excellent physical and operating condition. $40.00
Drake- TR-33 2 meter portable fm xcvr. with mobile mount, schematic and power cords. Unit is in good physical condition with a few scratches but works well and has new batteries. $40.00
Drake - R4A - works well with very little chassis discoloration. $145.00

All plus actual shipping costs. JPeg's available.
Best 73 and thanks for reading.

# 1198. FS: Heath Six and 2 meter station

Newsgroup: rec.radio.amateur.boatanchors

From: Dave K4DLJ <k4dlj@bellsouth.net>
Message-ID: <3C5AA4E0.E10B26BD@bellsouth.net>
Source record: 45027

Have for sale the following:
Heathkit model SB500 - 2 meter tranverter with orginal manual.
Un-modified but does have a hbrw. preamp mount which can be removed if
you want the collectors grade. Front panel is flawless. Works well.
Cabinet has very few few scratches but is very collectable. - $160.00
Heathkit model SB110A - 6 meter SSB/CW transciever with original manual.
Un-modified, very clean and works well. Front panel is flawless and
cabinet has only on small paint chip. Complete with matching speaker -
SB600 which is in very good condition and no scratches. Matching power
supply - HP23 - AC supply for 110A/500 is mounted in the SB600 cabinet.
Will not sell speaker/pwer supply seperately. $380.00
All cables included.
Will sell as complete station as listed above for $525.00
Plus actual shipping costs.
Jpegs available.
Thanks for reading and 73

# 1202. FS: Swan HF-700S Transceiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-01 16:31:14 UTC
From: Bruce Stock <ab7yd@earthlink.net>
Message-ID: <mpz68.13136$ks5.1267430@newsread1.prod.itd.earthlink.net>
Source record: 45030

This Swan HF-700S 5-band SSB/CW transceiver is in good to excellent physical and electrical condition. It has been used on the air recently and garnered good reports. Included are the PSU-3 power supply/speaker and the original manual. This rig is guaranteed not DOA.

Pictures are available at:

http://home.earthlink.net/~ab7yd/radios/HF700S.jpg

http://home.earthlink.net/~ab7yd/radios/PowerSupply.jpg

If you are a fan of Swan, you'll like this rig a lot.

Price is $279 plus shipping costs from Seattle.

73, Bruce AB7YD

Hi
Still, when you look at the history and you find that the
same person has bid on almost all of the high dollar sales
of one person and not bit on anything else from anyone,
the words shill do come to mind. It is even more convincing
when the Items cover a spectrum of different types. I've seen
this myself.

First thing you do is ohm out the guitar pickup. If it works,
then you plug phones into the phone jack on the S-20R. If they
work, too, then unplug everything, put it back in the closet, and
leave it the Hell alone!

If the pickup shows infinite resistance, then take the guitar to
a good guitar repair shop and have it replaced, being sure to
tell him what a fsckwit you were and how this happened. When the
guitar is again functional, put it back in its case in the closet
and leave it the Hell alone.

If the phones don't work, then find someone to fix the S-20R's
audio. When it's fixed, put it back in the closet and leave it
the Hell alone.

Do you sense an element of repetition, perhaps?

The radio would not act like an amplifier for a device plugged into the
earphone
jack.

Plugging a guitar pickup into the speaker jack would not harm the radio in
any
fashion.

Ask him to fess up to what he really did to the set....

Pete

If the phone jack automatically disconnects the speaker, chances are the problem is merely a poor connection on the speaker jack switch contacts.

Sorry, Dave, didn't mean to dangle the idea of a cookie in front of a
dieter.

It would be to the seller's advantage to have the non-bidders change
their mind and bid higher than the winning bidder, so a good seller
tries to motivate more non-bidders to bid. That's how the opinions of
non-bidders would be important.

Dave

>>you tell me what i did?

What you did was to use the guitar as a speaker. If you tuned the radio right
and listened closely, you could have heard Radio Moscow coming out of your
guitar.

Now, you might have burned out the guitar's pickup coils. Or maybe the contact
wasn't good and the circuit remained open.

A BIG no-no with tube gear is playing it loud into no load at all -- can short
out the output transformer, which then burns up the power transformer, leaving
you with an organ donor parts set. So if you turned the radio volume all the
way up, and the radio was picking up a station or even loud static, you *may*
have damaged the radio severely. Maybe blew out the guitar pickups too, you'd
have to check and see.

In fact, the best thing is to check the radio without any preconceived notions
of what's wrong with it. Now that I've given you some nasty notions -- sorry.

Hello from Italy,
I found an old Shure microphone, the model is CX8QJ but I don't find any
data about this model.
It is red and without PTT, anyone know what kind of model is it?
Thanks and 73

You do have a point. If the non-participants were to
make their price opinions known, I'm sure it would affect the
market. But how to do that in a practical manner? hmmmm...

I have a point, too... but if I comb my hair right it don't show.

Hi
I have picked up a orginial no mods Gl-1000 it has a plate voltage of
1100
volts on the plate. the swr between the rig and amp was checked 1:5:1
have a mn2000 between icom 751 and amp but since swr was ok just left in
thru mode.
when i flip swith to current it does not move.
when i flip to rel output and tune on it plus the adj in back for rel
output it shows around 4-500 on top scale but amp is producing no output
have drake w4 in line after amp shows 0 output. was checking on 3.919
since it is the only resonate wire antenna i have up.
any help on this would be greatly appreciated.

Aah, but Mr. Linger agreed to have the radios sent to a expert to be fixed. Mr. Linger agreed to pay for half the repair after receiving the estimate. It was gracious that Mr. Linger offered to take back the radios (he would then have our money and our goods) but he agreed to something else. This agreement to send the radios to an expert was after the gracious offer to take them back. This agreement is about a year old and we want Mr. Linger to pay what he agreed to complete the transaction. Its very simple and payment is all we want.

The schematic does mention the inductance of those chokes,
though it's the parts list that specifies the Ohmite.

The two in the power line, the Z-50's, are listed as 7uH.
Since that's just building up a whole power line filter,
you might just try one of those power line filters that have
two terminals on one end, and a jack for a three-prong cord
at the other. It takes care of the chokes, and the worry about
getting capacitors for connecting across the power line.

Or, find a scrap switching supply, like from a computer,
and grab the line filter components out of that. There's
bound to be some sort of coil, though the ones I've seen
seen usually have some sort of bifilar wound coil, and some
capacitors that go across the AC line.

The other choke, the Z-28, is listed as having 21uH. Find one that is in the general range and enough current rating, and you should be fine. Try one of those moulded chokes, though I don't know about their current rating.

I can picture a chart listing those Ohmite chokes, and their inductance, but I can't remember where I saw it. There wasn't anything special about them, as far as I know, other than in an era where you'd tend to see 2.5mH values when you saw chokes, the Ohmite series was a range of inductors, that just happened to associate a given inductor to the ham band, in MHz, where it might be most appropriate.

You could probably just wind some coils of basically the same inductance, and get away with it.

Or try one of those 2.5mH chokes, after all, they worked in a lot of other items of that era, as plate chokes.

> Visit my amateur radio web site at http://www.qsl.net/k5dh

Again, there's nothing magical about those coils.

The 3003, according to a chart I found, is a .5 inch diameter coil, 2
inches long, with 16 turns per inch.

The 3016 is a 1 inch diameter coil, 3 inches long, with 32 turns
per inch.

Oops, I see the parts list even specifies that information.

So for the 3003, find some sort of coil form half an inch in diameter
and 1.5 to 2 inches long. Get some wire. Since the parts list
says 23 turns, then fit that into a length bit longer than 1 inch.

For the 3016, find something an inch in diameter, maybe 1 inch long.
The parts list specifies 19 turns. So wind it so it fits into
the about the right length.

The phones jack is connected to the grid of the audio output tube. It's intended for hi-impedence headphones. Inserting a plug in the jack should disable the speaker, but if it was corroded and/or in just so, the speaker might still work. So maybe it could work as a sort of a guitar amp. If the 6F6 was driven into hard clipping, the voltage spikes might have damaged the capacitor across the audio transformer secondary or the audio transformer. Likely an easy fix. Needless to say, all the paper caps should be replaced.

Amateur Radio Newsline™ Report 1277 – February 1, 2002

Amateur Radio Newsline report number 1277 with a release date of Friday, February 1st, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The President of the United States speaks to hams in Florida and is ham radio seeing a second Solar Max? These stoies are first on amateur Radio Newsline report number 1277 coming your way right now.

(Billboard Cart Here)

**

BREAKING NEWS: PRESIDENT BUSH COMES TO HAM RADIO

The President of the United States has come to ham radio. Bill Burnett, KT4SB, has the details:

--

President George W. Bush has taken to the ham radio airwaves. This, to thank the Florida Amateur Radio community for being ready to serve the public when it is needed.

The President’s comments were made during a stopover the morning of January 31st at the Volusia County Fire Services and Training Center near Daytona. Around 9:15 AM Eastern Time, President Bush checked in to the Northern Florida Amateur Radio Emergency Service Net on 3.950 MHz using a portable station set up John Schmidt, AF4PU. Then the President made these remarks to the 40 or so stations listening to the net:

--

President George W. Bush:

"I want to thank all the volunteers who help make sure that Florida is prepared for any kind of emergency. I also want to assure you that your Federal government is doing everything we can to make sure that there is not an emergency--starting with unleashing the mighty U.S. military overseas to bring evil ones to justice. But should there be a need for a response, I want to thank you all for helping our communities be prepared. And finally, I want to tell you--we are lucky to be Americans and may God continue to bless this great land of ours. Thank you very much."

--

Needless to say the net members were delighted to have the President of the United States address them. More important, hams nationwide can now be sure that President Bush knows that Amateur Radio operators are ready to serve whenever he, and the nation, needs to call on them for help.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

The complete story is on the web at
http://firstcoastcommunity.jacksonville.com/northfloridaamateurradiosocietynofars (Tnx NU4F, CQ Magazine)

HAM RADIO SCIENCE: TWO SOLAR MAXIMUMS THIS SEASON

In case you are wondering why the current solar cycle is still providing such amazing VHF and UHF DX, one researcher may have the answer. He says that the current cycle appears to be having a second peak and that this is really not very unusual. Henry Feinberg, K2SSQ, looks at the scientist and his latest data.

--

The most recent and ongoing Solar Maximum -- or Solar Max -- theoretically crested in mid-2000. Sunspot counts were higher than they had been in 10 years, and solar activity was intense. One remarkable eruption on July 14, 2000 caused brilliant auroras as far south as Texas. But after that, sunspot counts slowly declined and the Sun was relatively quiet for month-long stretches. Most scientists said that the Solar Max was over. But was it?

Now, as 2002 unfolds, the National Aeronautics and Space Administrations solar foorecasters say that it looks as if the Solar Max is back with us again. The Sun is again peppered with spots, eruptions are frequent and hams notice that the VHF DX keeps rolling in.

Why is this happening? Well David Hathaway, a solar physicist at the NASA Marshall Space Flight Center in Huntsville Alabama has one theory. Hathaway says that the current solar cycle appears to be double-peaked, and the second peak has arrived.

--
Hathaway Audio Here
In-Q: We have seen other cycles...
Out-Q: ...define this maximum
--

Scientists track solar cycles by counting sunspots and Hathaway is an expert forecaster of sunspot numbers. He says that sunspot counts peaked in 2000 some months earlier than we expected. He says that the subsequent dip toward solar minimum seemed premature and before long, sunspot counts reversed course and began to climb toward a second maximum that now appears to be only a few percent smaller than the first.

--
Hathaway Audio Here
In-Q: Its a bigger than average...
Out-Q: ...smaler than 19, 21 and 22.
--

Hathaway notes that there is a widespread misconception that solar activity varies every eleven years like a pure sinusoidal wave. It isn't. He says that solar activity is chaotic and there can be more than one peak in any given period. Translated for ham radio: Enjoy the VHF DX while you can.

For the Amateur Radio Newsline, Henry Feinberg, K2SSQ.

--

Hathaway says that the Solar Max eleven years ago was much the same as this one. The first peak arrived in mid-1989 followed by a smaller maximum in early 1991. And if you are interested in hearing more about this interesting phenomena from David Hathaway its as easy as taking your web browser over to www.rainreport.com. Or you can call on the phone to area code 847-827-7246. (NASA, RAIN)

**

HAM RADIO IN SPACE: HF ANTENNA INSTALLED ON ISS

High Frequency ham radio operations from the International Space Station could be on the not to distant horizon. This, after a successful space walk on January 25th to install another antenna on the orbiting outpost. Amateur Radio Newsline's Roy Neal, K-6-D-U-E, has the details.

--

The spacewalkers have had another good day in space. On Friday the 25th of January, Cosmonaut Yuri Onufrienko, RK3DUO and Astronaut Dan Bursch, KD5PNU, successfully mounted a second ham radio antenna near a docking port amidships on the International Space Station. It is made of flexible tape and is similar to but longer than another antenna installed on January 14th. That one tunes both VHF and UHF frequencies. The new antenna will tune HF frequencies.

ARISS Board Chairman Fran Bauer, KA3HDO, says it definitely will work on ten meters and may even be made to work on 15 and 20 meters. BUT right now there is no gear on board to handle those frequencies. Experiments using the lower frequencies are on the list of futures for ARISS but no timetable has been assigned to design and build them.

Owen Garriott, W5LFL, the first man to operate ham equipment in space, once prophesied that a five watt transmitter in orbit might well be heard simultaneously world wide. The great number of hams with good stations on the lower frequencies also makes them enticing to ARISS. It's a safe bet that serious consideration now is being given to expedite such a project. Once a station is sent up, the antenna will be waiting.

The new antenna is the second of four to be installed on board the space station. No timetable has been announced for the final installation. All of

these amateur antennas were built by Italy, tested and qualified in the US, to fit ports built by Russia, as befits the international nature of the ISS.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

Installation of the 2.5-meter long flexible tape antenna involved not only the mechanical deployment but routing cables and establishing the R-F connection as well. (ARISS)

**

HAM RADIO IN SPACE: THAT ANNOYING SATELLITE IS OFF 2 METERS

An annoying mystery satellite transmitting AFSK, frequency modulated Morse on 144.100 MHz for several days has been identified. It turned out to be a signal from the MAROC-TUBSAT satellite. This is an Earth-sensing spacecraft owned by a Moroccan government agency called he Royal Center for Remote Sensing. It was placed into a polar orbit by a Russian launcher on December 10, 2001.

As soon as he learned of the interference to amateur operations, Professor Udo Renner of the Center had the 144.100 MHz transmitter turned off. He then notified AMSAT Germany that TUBSAT was no longer on two meters.

But TUBSAT also has a downlink at 436.075 MHz. This system is only busy over North Africa and Europe and only when the control stations in Rabat and Berlin are activated. It has not been heard elsewhere in the world. (AMSAT-NA)

**

SPECTRUM PRESERVATION: ARRL SAYS IT WILL FIGHT TO KEEP RFID OFF 70 CM

The ARRL says that it will go all the way to protect the 70 centimeter ham band from a threat brought by commercial interests. At issue is a plan from SAVI Technology and already tentatively agreed to by the FCC to deploy unlicensed transient R-F identification tag transmitters operating between 425 and 435 MHz. These tags run at much higher field strengths and duty cycles than Part 15 rules now permit.

According to a League bulletin issued on January 29th, ARRL officials have already met with members of the FCC staff as part of the League's effort to stave off a band threat. The bulletin says that General Counsel Chris Imlay, W3KD, and ARRL Technical Relations Manager Paul Rinaldo, W4RI, delivered an ex parte presentation to FCC Office of Engineering and Technology staffers January

14th outlining the opposition of the ham radio community. (ARRL)

**

FCC: CHAIRMAN POWELL HOME AFTER HOSPITAL TESTS

Federal Communications Commission Chairman Michael Powell was discharged from the hospital on Friday January 25th. This, after a two-night stay in the to undergo tests because of a lingering stomach bug.

Stomach discomfort caused him to cancel appearances at the Consumer Electronics Show in Las Vegas on January 8th and again at the annual conference of the National Association of Television Program Executives on Wednesday January 23rd. Doctors advised precautionary tests that required overnight stays at Walter Reed Army Medical Center in suburban Washington. (Published news reports)

**

ENFORCEMENT: THAT SONG WAS NOT AS BAD AS WE THOUGHT

The Federal Communications Commission has dropped an indecency fine against a Colorado radio station. KKMG FM of Colorado Springs had been fined seven-thousand dollars for airing the edited version of Eminem's "The Real Slim Shady." This, after a listener wrote the regulatory agency to complain.

At the time the fine was issued federal regulators said the edited version still included some expletives and references to violence and graphic sex. But the FCC now says it has reconsidered. It now says that the lyrics in the edited version didn't violate its rules by being "patently offensive." (FCC)

**

RESCUE RADIO: BRAZIL RADIO OPERATORS HELP IN POWER OUTAGE CRISIS

A major electricity blackout hit at least five Brazilian states on January 21st, and it was hobby radio enthusiasts that let people know about it.

The blackout, which began at 1:30 p.m., hit hardest in the industrial southeast and the major cities of Sao Paulo, Belo Horizonte, Rio De Janeiro, Goiania, Vitoria and the capital, Brasilia.

According to news reports, Brazil’s National Energy Agency blamed the outage on transmission line failures. The same news report credited Brazilian hobby radio operators as informing authorities that subways in Rio De Janero and Sao Paulo were halted and that traffic lights were out snarling commuters in several areas.

The outage was caused by a failure at the Itaipu hydroelectric station in southwestern Brazil. A power-line failure caused thirteen of the dam's eighteen turbines to stop, cutting off nearly 20 percent of the country's energy. Power was restored about three hours later. The news story did not identify the radio operators as being hams. (Various shortwave news reports)

**

RESCUE RADIO: NEW INTER-JURISDICTION RADIO SYSTEMS BEING INTRODUCED

Santa Clara County California, police, fire and emergency medical personnel have never been able to communicate with one another at the scene of a major disaster. This is because each agency uses a separate radio system. That is expected to change this year.

Santa Clara County will be leading the nation in using new digital radio technology to solve the inter-agency communications problem. The new system will allow up to eighteen participating jurisdictions in any county to talk to one another instantly.

By way of example, once the system is up and running, officers involved in one of California's famed high-speed car chase will be able to talk directly to police in the neighboring jurisdiction as the suspect approaches that town. They won't have to switch channels or go through dispatch centers. This means less time wasted and the probability that lives will be saved.

While Santa Clara county is at the head of the pack in adopting this new digital communications technology, the same news reports say that and Washington, D-C is not far behind. (Cal-State Info.)

**

PUBLIC RELATIONS: A CHEAP SATELLITE

A Cheap Satellite is the name of an Associated Press item that highlighted the work of the faculty and students at the United States Naval Academy in the development and launch of the P C Sat ham radio satellite. The story tells how the twenty-five pound bird was built using off the shelf products including a tape measure for its antenna and rechargeable double A cell batteries for power.

The story was written by Tom Stuckey and moved on the wire on Wednesday January 23rd. It noted that PCSat, was the 44th amateur satellite put in orbit. It is one of more than a dozen built by university students around the world. (VHF Reflector)

**

CONVENTIONS & HAMFESTS: ORLANDO HAMCATION WEAK SIGNAL FORUM

The Orlando HamCation will host its first ever Weak Signal VHF and UHF forum. Beginning at 2 p.m. on Saturday Ferbruary 9th, the one hour session will be moderated by N2CEI, of Down East Microwave. Also, Tom Haddon, K5VH, will be on hand to motivate more Florida hams to become active on the Microwave bands.

If you are in the Orlando Florida area on February 8th to the 10th drop in on the Orlando Hamcation. For more details and or advance reservations, go to oarc.org/hamcat.html on the World Wide Web (W2BZY)

**

CONVENTIONS & HAMFESTS: DATE CHANGE FOR RADIOFEST 2002

Brian Broggie, W6FVI, asks that we pass along a date change for RadioFest 2002 sponsored by the Naval Post Graduate School Amateur Radio Club in Monterey California. The new date is February 23rd. More information is in cyberspace at k6ly.org/radiofest. (W6FVI)

HAM RADIO SCHOLARSHIPS: THE DARA SCHOLARSHIPS

The Dayton Amateur Radio Association is one of three ham radio organizations seeking nominations for its scholarship program for the 2002-2003 academic year. According to DARA, applicants must be graduating high school seniors in 2002 and hold any class of an FCC issued mateur Radio license. The scholarship awards run up to $2000, as determined by the scholarship committee. Money must be used toward tuition at an institution of higher education.

To obtain an application, send a self-addressed, stamped envelope to the Dayton Amateur Radio Association Scholarship Program, 9873 Lower Valley Pike, Medway, Ohio 45341. You can also obtain an application by e-mail to n8emo1@msn.com. Completed applications must be postmarked no latter than June 1st to be eligible for this years scholarship program. (DARA)

**

HAM RADIO SCHOLARSHIPS: THE FOUNDATION FOR AMATEUR RADIO

Another organization offering scholarships to hams id the Foundation For Amateur Radio. The Washington, D.C. area group will administer sixty-two scholarships for the academic year running from 2002 through 2003. Licensed Radio Amateurs may compete for these awards if they plan to pursue a full-time course of studies beyond high school and are enrolled in or have been accepted for enrollment at an accredited university, college or technical school. The awards range from $500 to $2500 with preference given in some cases to residents of specified geographical areas or the pursuit of certain study programs. Additional information and an application form may be requested by letter or QSL card to the FAR Scholarships, Post Office Box 831, Riverdale, Maryland, 20738. (Foundation For Amateur Radio)

**

INTERNATIONAL - SOUTH AFRICA: SA RADIO AMATEURS OF THE YEAR NAMED

Turning to international news, South Africa is honoring two of its own as that nations Radio Amateurs of the Year. Q-News Graham Kemp, VK4BB, brings us the details:

--
The South African Amateur Radio Development Trust have announced the winners of the 2001 Siemens Radio Amateur of the Year Award. This award is made annually to a Radio Amateur who has made a major contribution to the Amateur Service either on a technical or development basis in ZS land.

The award has been bestowed jointly on Bradley Phillips, ZS5BP, and Garth Wilson, ZR6CY. ZS5BP for his work on the introduction of Iphone and the development of the Internet Radio Linked project. ZR6CY for his continuous efforts to develop communication skills amongst the youth. He has to date presented no less than 80 camps for Voortrekkers to learn the Morse code and basic communication skills.

For Q-News Australia, I'm Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

This award is considered as South Africa's equivalent to the Dayton awards presented here in the United States. (SARL News, Q-News)

**
INTERNATIONAL - UK: KENWOOD TROPHY AWARDED TO G3XWH

Meantime, over in the U-K, Richard Horton, G3XWH, who chaired the RSGB's Future Licensing and Examination Forum has been awarded the Kenwood Trophy. This, for his significant contribution to training and development in amateur radio.

Horton recently retired from the Radio Society of Great Britain's Board where he was responsible for amateur radio development. His committee was responsible for much of the work that went into the creation of the new U-K Foundation Class license. (GB2RS)

**
DX

In DX, DJ4KW and DK9GG are currently active from Belize as V31YN and V31GW, respectively, through early February. Activity is on CW, RTTY and PSK 31. (RSGB)

And IN3QBR will be active from Vientiane as XW3QBR until the 31st of July. He will be joined, from the 20th of April until the 10th of May by IN3ZNR operating as XW3ZNR. (OPDX)

And R1ANF began operations as CE9 slash R1ANF on the 29th of December from a Chilean base in the South Shetland Islands. He is active on 10 to 28MHz with 100 watts to an R6000 vertical. For all three QSL as directed on the air. (RSGB)

**
THAT FINAL ITEM: CELEBRATING THE LIFE OF ED CLEGG W2LOY

And finally this week, if you were on the VHF bands in the 50's, 60's and 70's then the name Clegg Labs touched your ham radio operations. And as we hear in

this report, the family of the man behind the gear is inviting you to help celebrate his life.

--

Even if you did not own any Clegg gear, the chances are that you talked to someone on the air who did. Whether it was the top of the line Interceptor receiver and Zeus transmitter or the entry level 99'er transceiver, it was easy to spot a Clegg signal by its almost overpowering modulation that seemed just right for the R-F carrier it was on.

Almost every product that carried the Clegg label was designed by the company's founder Edward T. Clegg, W2LOY. When he moved the company to Pennsylvania in the 1970's, Ed took the call W3LOY. Likewise, after retiring to Ohio he traded the 3 for an 8, but kept the famed L-O-Y suffix.

And regardless of the call area, Ed Clegg was first and foremost a communications designer well ahead of his time. Even more important, he was a positive influence on just about everyone with whom he came in contact.

Ed Clegg left us last September at age 80. Now, his wife Martie will be hosting a gathering in March near the Clegg home in Lancaster Ohio. The purpose is to celebrate the life of Edward T. Clegg. And they are asking you to help.

Martie, her daughter Linda and Linda's husband Rob MacGuffie, K2HZN, are asking anyone who knew Ed to share in the celebration. They know that most of you won't be able to be in Lancaster Ohio on March 30th. But some of you do have memories, stories, photos and other Ed Clegg memorabilia that would help to make this day even more unforgettable.

If you have something to share, please contact Linda and Rob before the end of February. Their address is 70 Province Road, Gilmanton New Hampshire with a zipcode of 03237. Rob's cyperspace address is K2HZN@yahooo.com.

For the Amateur Radio Newsline, I’m Cathy Anno, KB0FDU.

--

By the way, a number of us here at the Amateur Radio Newsline began our ham radio careers using gear designed by Ed Clegg. In fact, our producer Bill Pasternak, WA6ITF, got to know Ed while Bill was still a teenager operating A-M on the 6 meter band. (Clegg family)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). I had read the header, Bill. I'm not against eBay postings and look at them if they are interesting to me, otherwise ignore them. No filters needed.

I enjoyed taking a look at the old Drake gear.

If eBay postings show up _at_ _all_ on you newsreader is distasteful to you, then I can understand why you would complain about the header.

I have no problems with FA postings on this group and I also enjoyed
seeing the old Drake. My comment was referring to the sideways manner
of posting a third-party FA so as to avoid filtering. That is deceitful.

-Bill

Why would anyone do that Bill? What would anyone have to gain by telling a person who doesn't want to know about an auction, that there's an auction?

Bill, you will find that people over on this group are
a lot more grown up about Ebay. We came to a "gentleman's agreement"
that has worked well. You will find that most people
here do not appreciate people coming over here and starting
fights about FAs.

This Drake radio is extremely rare. I posted a link to it
because many people will want to look at it and talk about it.
It is not your business or your place to tell me or anyone
else on this newsgroup what they should or should not post
or read.

Please take your attitude back where you came from.
Dave S.

You can't talk logic and reason to these guys, old man.

Bill is part of a very small but rabid bunch of hoodlums
on another newsgroup. They have been trying for years
to dictate who can sell what there.
He's attempting to bring that fight over here.
Well, that ended here long ago and I don't think
there are many on this newsgroup who want that trash again.

That is your "militant, nutty" opinion.
Have you swallowed so much of the hate and gale from
the other group that you don't believe I would post
something just because it's interesting and I think
other people might want to talk about it?

As for "jumping on you-" I didn't start it, Bill.
I never do. So don't come in here impugning my integrity
and then whine when I kick your butt over it.

Just a few dumb questions.

Since the receiver's serial number is 257, I'm guessing it is not the first Drake receiver. Perhaps the 257th?

I'm assuming you meant to say this is the first receiver model Drake made?

Last question, what kind of heterodynes does this thing listen for?

Thanks,

Bob

The shortwave BC model was called the SX-190. The $75 price seems good
for such a rcvr.

If you really want to sell the thing, then talk about it here,
instead of only using this newsgroup for your forsale newsgroups.

I have no interest in visiting Ebay, and apart from all the
ads in this newsgroup that is for discussion, not buying and
selling, those stupid Ebay teasers bug me to no end because
you idiot sellers don't even bother saying anything in the
message, other than to post a link to the auction.

Most stuff on Ebay is "rare". So calling something that means
nothing. We don't even have a clue what Drake receiver it
is, you couldn't even bother to put that in your message.

You and a lot of the sellers seem to think that "rare" is
important only because you can get lots of money for it.
But "rare" to me means there were never very many of the model
made, and there has to be a story about that. If you found
a Tapetone receiver in someone's barn, would you merely come
here and post a link to the auction, or would you post some
information about it, or gasp, engage in discussion about
what must have been a really rare receiver? I saw an ad
for it in CQ or QST once, but I suspect few if any copies
of it were ever manufactured.

You want to commodify the old equipment, making them only
valuable because they can bring in money? The stuff has
value because people used it, or maybe it brings back memories
because it was their first receiver or transmitter back when
they were twelve. Some of it, everyone lusted after but
couldn't afford, but a lot of it was just average equipment.
People used it and abused it, and threw it out when they
didn't want it, or it got old. Thirty years ago, a lot of
the older stuff people call boatanchors now weren't wanted,
because it was old. You can come to this newsgroup and
hawk your wares, precisely because using the equipment
took it's toll. But you have no stories of this equipment,

you only have a "rare" item that you want to sell off, to the highest bidder. At the very least, you should be giving a commission to the people who modified their rigs in the old days, or trashed them when they were done with them, because they helped to make the old rigs "rare" so you can try to make money off it.

I remember when this newsgroup was created, I've said it before. Was it 95 or early 96? But to a large extent, the potential of the newsgroup has been wasted, because people, including yourself, are far more interest in making money off the old rigs than in talking about them.

What I remember, people like you brow-beated the newsgroup so the ones who cared about it being for discussion gave up on keeping the ads to a minimum.

Thanks Bill, I'm sure $100 wouldn't be an unfair price, but it has been
modified (not a bad one though) and the average person would feel it's worth
less because of that. I have both of the receivers, AX & SX. I just picked
up a perfect AX-190 at a fest and my old one is now surplus to my needs.

> Chuck WG2A

I'm not totally sure of the relation between the AX-190 and the original
Kenwood R-599. The Kenwood R-599 (for example) was an abysmal receiver
and it took after-market mods to make it truly functional. My
philosophy on mods is that as long as they do something worthwhile and
are documentable then there's no problem. The grief occurs when extra
jacks are drilled on a receiver to hook up 'PopElec Bat-monitors' and
the like and extra add-ons are made with no clue to anybody other than
to the Silent-key who invented them.
But for 75 bucks it seems like a winner if it doesn't have holes bored
into it. If I had space for ANOTHER surplus need, I'd jump on it.
-Bill

Same here. This newsgroup has been trashed by hucksters. It was once an interesting place to visit. Now mostly a wasteland of redundant ads.

R-A-R-E!! L@@K!! Give me a break. If I were looking for "extremely rare" items, I'd do my own shopping, not wait for some shill to cram an ad in my face.

Any creature on Planet Earth who doesn't already know how to search Ebay on his/her/its own, please raise his/her/its hand. No responses. Right.

Now, does anyone have anything interesting to discuss? Guess not. Bye.

Phil

# 1277. FS: Many Morse Keys

Is that what the fuss is about? That sure doesn't seem like a receiver.
A "heterodyne monitor" sure sounds like a transmitter accessory.
When I was licensed thirty years ago, you had to draw one of those,
along with a transmitter and a receiver, as part of the test here
in Canada.

Maybe I'm misinterpreting the function from that webpage,
but I thought a heterodyne monitor would have been used
to monitor the transmitter. You'd overload your receiver
too much to be able to get a good idea of what the transmitter
sounded like, so you'd have something like this. Relatively
insensitive, but you could listen to your signal.

For that matter, you could plug your headphones into your
grid-dip meter, leaving it on oscillate and get the same
effect, though perhaps not the same effectiveness.

Sometimes I see bits of news, and I'm surprised that nobody brings
it up here, though I suppose I'm just as capable as doing it.

Within the past few years, there was an article in QST about a "homebrew"
Collins receiver, something like the 75A-series. Somebody working
for the company was allowed taking pieces home, and he brought enough
that he was able to put together the whole receiver. I though that
was intriguing.

But I did read today, in that Newsline post, that Ed Clegg had
died, back in September. Maybe the magazines have already done
a bit about his death and I missed it, but I am a bit surprised
that we are only seeing news of his passing here now. When Doug DeMaw
and Frank Jones died, I'm sure I read about their deaths in one
of the ham newsgroups.

I don't think I've ever been close to a Clegg rig, but from the
ads they were something to wish for. Not just the fancy SSB stuff
in the mid-sixties, but his creations certainly helped to move
amateur FM away from those boatanchors people use to keep
in their trunks. I've seen criticisms in recent years about
that all channel 2m rig, was it the FM-27? but memory tells me
it was the first 2M FM rig that covered all the "channels".

Can some of the appeal of these old rigs be that they often
were created by named individuals, or at least by companies
where there was somebody very visible? Clegg, Gonset, Hallicrafters,
Collins, Central Electronics, and all kinds of other companies now
fairly long gone. You could name them, and usually a name or
a face connected with them would come to mind.

I'm not the seller, sir.
I think it's an interesting radio.
Someone else might, too.
We might even want to discuss it.
That's what we're supposed to do, right?
I feel lucky to even see a photo of it.

Before you go piddling on people, you might want to
actually *read* what they're talking about.
That way you might avoid looking like an idiot.

Just out of curiosity, what was wrong with the R-599 (other than the 4
pole crystal filters that went to 8 pole in the A and D models (what
happened to B and C?))? I've had a couple and while there not as good
as an R4 Drake on a purely casual user level they seemed pretty hot.
I'm not saying your not right, just curious what mods improved them.

Over in the other newsgroup Dave is very insistant about posting auctions
and even suggested himself that that header should contain FA so people who
know how to use the ebay search engine could filter out such posts. Now he
threatens users with abuse from his ISP for posting replies to a message
carefully worded to avoid spam filters.

I had a neigbor ham about 2 blocks away and anytime he got on the air on
any band the 599 was wiped out - completely.
There was a front end mod in one of the ham magazines...I've looked all
over for a copy and can't find it. I recall it was 73
Magazine...mid-70s. It wasn't a feature article, just a 'stray' sort of
thing. It involved replacing the RF Amp with a better transistor and I
think a resistor or two. It also gave instructions for rewiring the
Squelch control to an RF Gain control.
After the mod the receiver worked great and I was very pleased with it.
BTW, I upgraded to an R4B later :-) It was definitely a better
receiver.

Very interesting. It does resemble the monitor function of a GDO.
My guess would be for checking the tone of a AM/CW transmitter.

It is too bad that I had to wade through so much feculance on the
list in order to find meaningful comment on this piece.

I have always wondered what would be the outcome if all the
wild-eyed dictators bent on ruling the world were locked up in
the same room together. Perhaps we would have little left of the
experiment but a burned out building.

Source record: 44929

I have a copy of that article. I did the mod to my SX-190 and it was definitely worthwhile. Basically, the two front end transistors are replaced with mosfets and the result is more gain. Fairly easy to do, too. If any of you guys need a copy of the article just let me know.

Now on my SX-190, the Q-multiplier doesn't seem to multiply any Q, as it were. I don't have any service literature on this thing, and so if anyone has any, like an alignment procedure, I'd sure appreciate it.

Nice trivia. Thx. BTW, Bogies' real boat was the Santana - a sailboat.
There's a whole mess of BA action in the movie "Hatari" with John Wayne
than I posted a while back. But I never did find out the maker. If you happen
to see that on your TV Guide check it out and get back to me.

Last night was "Bond Nite" on ABC. They showed "From Russia, With Love".
In one scene he breaks into the Russian Consulate to steal a code machine.
Sitting on the table next to the top-secret Code machine is a whole row of what
looked like top-of-the-line Tektronix or H-P O'scopes - all running. I guess the
Russikies needed lots of O'scopes . ( Hi Hi.)

Source record: 44930

Not shilling, just asking -

At http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=1328404349,
there is an SX-62 with an antenna trimmer added to it.

The knob is where the logo is usually found to the right of the dial.
In talking with the seller, he pointed out that the panel under the knob
is impressed. Also take at a look at the photos which he refers you to
to see how the trimmer is installed. Could this be a factory
installation?

I'd sure love a copy of that article. If its of any use, I have an
almost readable schematic for the SX-190. Q11,12 is the Q-multiplier
circuit.

Source record: 44936

I know how you folks feel about those eBay messages; it's that redirecting to the eBay message that gets me. I have my filters set so that almost any reference to eBay, FA, for auction, etc doesn't get through. I couldn't catagorize Mr. Stinson, so I just set up my reader to block all of his messages. In his case, it is not the fact that he made reference to the auction, but it is the aggressive way that he tried to justify himself, sort of like the person gets three inches from your face when he yells at you. I would say, the best way to deal with him is to go to the menubar under "Message", and then invoke the "Block Sender" option. This way, you will never have to view Mr. Stinson's messages again!
On a final note, I don't have anything against eBay, except that I don't use it for buying anything anymore. Out of 6 receivers that I purchased from eBay over the last few years, 5 of them didn't work, and 3 of them were just plain junk. If they were sold "as is", that wouldn't be too bad, but when misnomers such as "nice","you won't find a better unit", and "good condition" are used, I would say that some fraud is being committed. A couple of the units were in such poor condition, that one might be inclined to think that they were made in the '20s, but I don't think that the transistor was invented until around 1947 or '48!

I don't think so; in my specimen, the area where ant capacitor is placed,
was free... well, now it is occupied by a band spread variable cap, as it
goes... but I know it has been added by first owner :-)
Anyway, tuning knob seems to be identical to the symmetrical dial set knob,
so it could also be a factory add-on, although capacitor support seems to be
made in a different metal.

Regards.

I think a bandspread would be more useful onboard addition, since it's
easy to use an outboard antenna tuner.

On your SX-62, is the panel depressed or impressed behind the logo on
the right side?

Dave

the second time was in in 47, when it was first 'invented' nobody
found tubes impractical as they only used one or two in a radio

I have the following items for sale:
A Hallicrafters SX-117 ham band receiver in excellent condition with its manual. The cost is $200.00 US plus shipping costs.
A MFJ Versa Tuner III model 982c. It handles 1.5 KW and has seldom been used. A manual is included. The price is $80.00 US plus shipping costs.
A Heathkit HO-10 monitor scope in good working order with its' manual. Its' price is $35.00 US plus shipping costs.
If any of these items interest you please email me at peter.christensen@shaw.ca
Thank you. Peter.

# 1334. Re: dentron GL-1000

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-04 04:02:30 UTC
From: ehsjr@bellatlantic.net
Message-ID: <3C5E07E7.B1AA207D@bellatlantic.net>
Source record: 44862

Look at the schematic. RF comes in through K1-B, FL1, C1 & C2
and arrives at the cathode of 4 D-50A tubes in grounded grid
configuration. That causes the tubes to draw current through
RFC6. If RFC6 is open, no current. If all 4 tubes are bad, no
current. If all 4 parasitics are open (RFC2 through 5) - no current.
If no RF arrives at the cathode - maybe no current. (I don't know
what the quiescent current is. It might be above 0).

Now look at the HV rectifiers feeding +1200 V to caps
c21, 22 & 23. Look at the bottom of C23 - you will see
R7 connected there to ground. R7 is a meter shunt. It
develops an extremely small voltage drop across it. You
can visually check it - but also connect an ohmeter from
ground to the C23 R7 junction and look for 0 ohms
WITH THE AMP UNPLUGGED. Use a shorting stick
to short out C21 C22 and C23 before testing.
If R7 is open - no current.

Now look at the output circuit: C11, L1, L2 and K1-C
If any of them is open, no current.

The switch (output/plate voltage/current) could be
bad - but that would not cause no output from
the amp.

Finally, if the tubes don't heat up, they won't conduct -
no current. So a bad filament supply (part of T1) could also
cause no current.

Now, if you find listed above to be open, you want to try
to figure out why it is open. If there is a short in there somewhere,
or you had an arc over or runaway oscillation, that could cause
a component to open. You want to fix the bad component AND
the thing that caused it to go bad. You will first need to find the
bad part before you can determine what caused it to go bad.

If memory serves me, the D-50A tubes are hard to get. So you
want to fix it right so that you don't kill the tubes you have - or
new ones, if you need them and can get them.

If you don't have a schematic, go to BAMA
and get an online copy. (Search on boat anchor manuals)

FS: Johnson Ranger transmitter. I tuned it up this weekend to make sure it works good. The front panel and cabinet is about a 9 in appearance. I have a pix that I can give to those seriously interested. The back panel is original except someone added a jack (very neatly done) for you to be able to remote key a changover relay. I have a manual copy that goes with it. $350.

Source record: 44874

I'm selling a Johnson Navigator transmitter, complete with copy of the original manual. It's in pretty good condition. Here are the faults: an extra 1/2" hole on the panel to the right of meter, non original meter, cabinet needs repainting, final output coil ceramic form is cracked and needs to be epoxied, non original AC cord, a little wear around the operate switch. Otherwise appears to be unmodified. Price $250.

I have no idea specifically might be wrong in the HRO-500, but I'm not
sure it's really a surprise that the PLL would be a common problem.
The receiver dates from the early sixties, when transistors were
still relatively new. PLL's weren't knew, but I can't place a receiver
that used one before the '500 as a local oscillator. And this isn't
today's synthesizer, either. Instead of a programmable divider that
you'd see today, you locked the local oscillator to a harmonic of
a 500KHz reference. The phase detector didn't have all that much lock-in
range, and so you had to tune the local oscillator to close to the right
spot (I forget the descriptions of how much of this tuning was from
a ramp generator, and how much from manual tuning). So you have an
early design, with still new devises, using a scheme that was thrown
out when devices allowed for it, and a receiver that was made almost
forty years ago, with the attendant capacitor problems (and since
I gather the receiver used germanium transistors, and they go bad
with time), attendant transistor problems.

Other than the PLL, the receiver is a straightforward superhet.
People with experience with other receivers would tend to be able
to find other problems in the HRO-500, but the PLL might give them
pause, or even make them give up on the receiver. It might not
even be that the PLL is a common problem (is anyone keeping statistics?)
but that you hear about it more because people are searching for an
answer, or selling one that has the problem.

Try a marine railway arrangement with a few lengths of railroad track and a cradle on wheels.

Ebay is quite simple - caveat emptor and just how badly do you want what is sold 'as is' anyway?
In some cases it might be a simple equation of market penetration increasing (or stimulating) demand.
For example - I have bought 5 Hallicrafters BA's off Ebay and was prepared to fix all 5! - but I am UK based and we don't see Halli gear that often.
To me, the risk of being screwed on a deal was outweighed by the desirability of the item - sometimes you just have to hold your balls and jump.

Adrian

# 1354. Control Products GMS-403

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-04 21:40:54 UTC
From: John Perkins <jperkins@NoSpam.accesswave.ca>
Message-ID: <GdD78.6286$X2.84387@nnrp1.uunet.ca>
Source record: 44882

I'm still anxiously looking for a manual for this NiCd charger.

The previous owner didn't have a lot of documentation with it ... a few brochure type handouts describing, rather vaguely, the box's capabilities.

The operator can select one of three charge/capacity settings from the front panel. Each of these is, in turn, established by a resistor combo mounted in an 8 pin DIP header inserted through a hatch in the bottom cover. I think I've figured out how the values for the voltage and current resistors are derived; but would very much like to confirm my reverse engineering.

Anyone out there have experience with one of these, or better still, have a manual that could be acquired or photocopied?

Thanks and 73

John

# 1361. biased topic: my old VOM - anything I can do ?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-04 22:59:47 UTC
From: Emanuele Girlando <emanuele_girlando@yahoo.com>
Message-ID: <DnE78.26622$om6.692335@news1.tin.it>
Source record: 44889

I am trying to revive my first 25 years old VOM (CHINAGLIA model Cortina Major/made in Italy almost unknown in USA - very nice and with great performance).
It seems to work properly but the needle doesn't stay at zero when I put the instrument in vertical position.
Rather it moves to the middle scale position under the effect of weight of the lower (heavier) part of the needle. I am sure, it didn't behaved like that before.
Does it mean it has lost magnetic field? or spring strength?
Anything I can do?
Tks in advance.
ciao

i assume from your description that it works fine in the horizontal
position..
if so...
is there a movement zero adjust screw near the pivot?
what effect does turning it have?
i assume it's not a taunt band suspension but a pivot and hairspring...
take a close look at the hairspring and make sure it's not tangleed or
perhaps there's an iron whisker between it and the permannet magnet..
let us know

good luck

If this is a D`arsonval movement (permanent magnet and moving coil suspended with coil springs) then you can look for a balance weight becoming dislodged,lost..you can sometimes make a weight and put the meter back in operation...IT IS A DELICATE OPERATION..GOOD LUCK ...Hal W4PQW

Mooron:
This guy is from the United Arabs Emirate. He is asking about
launching a "kill boat". It's 1.6 meters long and weighs 12 tons. Do
you know how they say "torpedo" in Arabic? Are you familiar with its
literal translation? I would advise him to get all his friends
together and strike the front of the "kill boat" with a sledge hammer
until they see the flowing river of wine and the 32 virgins. You may
have aided something you wish you hadn't.

Might be static electricity. A little dishwashing detergent on a damp
soft cloth across the face will get rid of that.

Otherwise the movement is damaged or the counterweight has shifted.

Good Luck,

Jim, ac6tk

Before purchasing something from Mike Linger you might look at some of the recent posts from unhappy customers. We are still waiting to receive

payment promised for repairing two defective radios from Mike Linger. It

has only been about a year. We have also received emails from a few others who have had similar negative experiences with Mr. Linger. We would like to hear from more people who have had similar problems.

Also, work in a semi-humid environment, or spray a little anti-static treatment on the plastic cover. Static charges on plastic meter covers can drive you nuts. Meter work takes steady hands, have a small glass of Merlot before you begin.

I've been taking a more careful look at that Drake museum site.

It seems to be an oscillator, feeding two stages of audio amplification,
with an antenna coupling to the oscillator coil. The "heterodyne"
would come from the beating of the oscillator with whatever was
hooked to the antenna jack.

The "monitor" in the name would indicate it's for monitoring something.
Yet, if that thing really runs in the VHF range, it's not going to
be all that stable, especially compared to a crystal controlled
transmitter. There's no regen control, so it can't be for monitoring
modulation, which would have been AM at that time and frequency,
which I thought it might be for at first. Likewise, because it
can't be all that stable, I'm not sure how useful it would be
as a "frequency meter", which was another thought I had. Maybe
it could be calibrated to the extent needed, so you'd tune the
unit to get a beat note with an external signal and read the
frequency off the dial, but the drift of the oscillator couldn't
make that all that accurate. (I"m assuming the oscillator is running
in the VHF range where the unit is supposed to be used, according
to that Drake site. A self-excited oscillator running in the 150MHz range
would not be all that stable. However, perhaps my assumption is
wrong, the oscillator runs at a frequency where it would be relatively
stable, and you beat a harmonic of the oscillator against the
external signal.)

I don't suppose someone who actually used one of these things
way back when would come across this thread and comment. Or
given that it's supposed to be "rare", maybe it was an idea
that turned out impractical and so there really aren't many
in production.

> Newsgroup...Interesting...
> Now if we could only do way with Dayton and all the other HAMFESTS around the country
where
> people are SELLING Ham equipment and MAKING money or at least trying to make there Hobby
pay for
> itself.............
>
> Ron
But that's the issue here. A few ads don't hurt a newsgroup. But
when enough ads get posted, then people just assume it is a forsale
newsgroup, and the flood starts. With time, people look in here,
see the ads, and assume discussion isn't welcome. And then you've
killed the reaosn for a discussion newsgroup. And while the charter
is wishy washy about letting ads in, the primary reason for this newsgoup
was for discussing this old stuff, not selling it.

And there is a big difference between a fleamarket, which is intended
for buying and selling, and a discussion newsgroup. And oddly enough,
a hamfest may be a better place to discuss old radios than this newsgroup,
which is sad. You go through the rows of equipment, and you see your
first rig, or one you lusted after thirty or forty years ago, and will
you say "how much"?, or will you say, "I used to have one of these" or
"I always wanted one of these". And if the guy selling it is actually
interested in the equipment more than it's monetary value, he'll have
something to say about the equipment, either because it was his first
rig, and he's finally selling it, or because he bought it because he
always wanted one.

The silly Ebay ads here don't say one bit about the rig. All we
see is (usually) that the rig is rare, and a URL to the specific
auction. The forsale ads are the same way, nobody is interested
in telling the story about the rig, they just want to sell it.
I probably wouldn't say anything about this, if it was in a forsale
newsgroup. But this is a newsgroup set up for discussion, not
selling things. And that's when the ads look especially mercenary.

Is the hobby buying and selling equipment, or restoring and using
an old rig? If people don't really have much to say about the
rigs that they are selling, then I suspect it's the former, and
that does nto really seem like an interesting hobby.

Look at this very thread. Stinson advertises an auction for
a "receiver", yet a secondary source says it's a "monitor".

I do think it's an intriguing piece of equipment, and I am still puzzled about where and how it was used. But it's not at all interesting that Stinson wants to sell it.

Just a wild guess, but it may be some kind of navigation aid for pilots, locking in on a beacon or "heterodyne" of some sort to help guide a plane.

What a foolish question! How about some more detail? How about considering that most manual ways to launch a "kill" boat would cost more than renting a crane or even a helicopter for a couple of hours. How the hell big is the boat for crying out loud, how far from the water, is it on a truck, bla bla bla...

# 1398. FS: JOHNSON RANGER II

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-06 01:16:16 UTC
From: Don Schichler <schich@frontiernet.net>
Message-ID: <u61102nqpheva0@corp.supernews.com>
Source record: 44826

I'm selling a Johnson Viking Ranger II in good condition. There are no gouges or dents, and it still has all the original knobs and screws. The cabinet and middle front section have been repainted (not original color) and there are a few minor touchups. It looks nice - I will be happy to email you a picture.

The internal VFO rotary switch has been replaced with one that doesn't have quite as many contacts, so it is no longer wired for 6 meters. Its works OK on 40 meters (haven't tested on 20/15/10), but is way out of band on 80/160, so apparently the VFO still needs a little work (operates fine with the xtal on 80m). Asking $240.00 plus shipping or pick up in Rochester, NY. Email me with any questions.

Don, K2FY

Mr. Linger,
Here again is a few of the emails you and I sent where you agree to pay for half the repair. Look very carefully at the dates on the repair bill which was forwarded to you and the date when you agreed in writing to reimburse us for half the repair. We just want you to pay us the money you agreed to about a year ago.

Here is the repair cost as sent to me and forwarded to Mr. Linger on April 1st:

Subject:
RE: PRC-70 fix
Date:
Sun, 01 Apr 2001 12:48:54 -0400
From:
"Karlow, Jim" <Jim.Karlow@Takata.com>
To:
Mike <km6ab@pacbell.net>

Mike -

Both of the PRC-70 radios are now fixed and ready for final test prior to shipment back to you.

The following was done to the "Mike" radio:

1. Replaced 4 amp fuse. in A2
2. Repaired A20 DC control module, 2N2222A Transistor.
3. Fixed pinched tuner control wire in main chassis. Prevented tuner and

Final operation.
4. Replaced A24 A2 Coupler Digital Board - Eliminates Intermittent operation.

Radio Checked Operational.

The following was done to the "Mitch Radio"

1. Repaired A4 module - +5 volt regulator Shielded Inductor Short to Ground, 180 ohm resistor, 2N2907 transistor, 2N3720 Transistor

2. Repaired A-5 Module - -5volt regulator shorted. 2N2905 transistor, 2N2907A transistor.24 VDC regulator shorted 2N3766 transistor, regulator

relay.

3. Replaced 15 amp and 4 amp fuses in A2

4. Repaired A20 DC Control, 2N2222A Transistor. Replaced broken resistor.

Radio checks operational.

Your cost is $ 328.26 for the repairs. Please send check. Meanwhile I will final check both units, pack and prepare to ship them back to you.

All the best,

Jim

Here is Mike Lingers agreement to pay for half which is dated April 2nd:

Subject:
RE: [Fwd: PRC-70 fix]
Date:
Mon, 02 Apr 2001 10:21:01 -0500
From:
"Linger, Mike" <mlinger@civilmail.tamu.edu>
To:
'Mike' <km6ab@pacbell.net>

Okay Mike;

I will pay half the repair. The shipping is on you. I should have insisted
on taking the radios back, just like anyone else would do in a deal where
the stuff didn't work but I allowed you to convince me otherwise.....Mike.

(the above is Mr. Lingers words untouched and posted exactly as I received it)

Here is the email I sent to Mr. Linger right before he agreed to pay for half the $328.26 repair bill:

> -----Original Message-----
> From: Mike [SMTP:km6ab@pacbell.net]
> Sent: Monday, April 02, 2001 10:15 AM
> To: Linger, Mike
> Subject: Re: [Fwd: PRC-70 fix]
>
> Hi Mike,
> We originally purchased them to use, not to sell or make a profit. We
> purchased them because they were advertised as working fine, which they
> were not even close. In our last conversation you mentioned you would
> split the difference of the repair up to $100 out of your pocket. The
> repair somewhat exceed $200 but all I am expecting is what you verbally
> offered. We made the purchase in good faith and I would hope you stand

> up to you word.
> Mike.

After reading these emails, does anyone have any doubt about Mr. Linger?

Mr. Linger, please pay us the amount you agreed on in writing so we don't have to crank up the posts to a full blown "BAD GUY ALERT !" on all radio and military related news groups and web sites. All we want is our money.

# 1401. Re: They've already been laid...but will they get paid? Broken PRC-70 blues..

Mr. Linger,
Here again is a few of the emails you and I sent where you agree to pay for half the repair. Look very carefully at the dates on the repair bill which was forwarded to you and the date when you agreed in writing to reimburse us for half the repair. We just want you to pay us the money you agreed to about a year ago.

Here is the repair cost as sent to me and forwarded to Mr. Linger on April 1st:

Subject:
RE: PRC-70 fix
Date:

From:
"Karlow, Jim" <Jim.Karlow@Takata.com>
To:
Mike <km6ab@pacbell.net>

Mike -

Both of the PRC-70 radios are now fixed and ready for final test prior to shipment back to you.

The following was done to the "Mike" radio:

1. Replaced 4 amp fuse. in A2
2. Repaired A20 DC control module, 2N2222A Transistor.
3. Fixed pinched tuner control wire in main chassis. Prevented tuner and

Final operation.
4. Replaced A24 A2 Coupler Digital Board - Eliminates Intermittent operation.

Radio Checked Operational.

The following was done to the "Mitch Radio"

1. Repaired A4 module - +5 volt regulator Shielded Inductor Short to Ground, 180 ohm resistor, 2N2907 transistor, 2N3720 Transistor

2. Repaired A-5 Module - -5volt regulator shorted. 2N2905 transistor, 2N2907A transistor.24 VDC regulator shorted 2N3766 transistor, regulator

relay.

3. Replaced 15 amp and 4 amp fuses in A2

4. Repaired A20 DC Control, 2N2222A Transistor. Replaced broken resistor.

Radio checks operational.

Your cost is $ 328.26 for the repairs. Please send check. Meanwhile I will final check both units, pack and prepare to ship them back to you.

All the best,

Jim

# 1407. Hallicrafters SR-42A 2m transceiver - connection info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-06 13:56:05 UTC
From: Roger Basford <Basford@btinternet.com>
Message-ID: <nX8rDnB1XTY8EwcM@btinternet.com>
Source record: 44835

Hi,

I have acquired a SR-42A without a manual and a power lead. If anyone can help I need the pin-out of the octal male plug on the rear for 117v AC and 12 Volts DC power. Also, the mic socket has been changed, and I would like to know the pin-out of the original standard 4-pin. I assume that a rig of this vintage used a crystal or other hi-impedance microphone?

TIA,

It's being worked on. Most major ISPs and many backbones here in .us
are fed up with the constant assault from .cn and .kr, and are
considering ways to filter things.

E-mail is most difficult to filter safely, because false positives
(isn't really spam, but gets tagged as such or deleted) can be so
devastating to income and reputation.

UseNet is next most difficult, since most news admins don't filter
by domain yet, or don't have good filters in place, and the list
of spammers is so large.

Yes, I do deal with this for a living.

I have for sale a nice condition Yaesu FT-101ZD. This particular transceiver is the version with AM mode included. This transceiver uses a pair of 6146W's as the power amps. The cooling fan option is also installed in this rig. Cosmetically it is in nice shape with one small hairline scratch next to the clarifier control. Electrically it is in fully functioning condition with full output on all bands (~100 watts). $400.00 plus shipping and insurance from zip code 76001.

Hi All, I am trying to find a source of 5 or 10 watt 18 k ohm resistors, ( to replace the infamous 18 k ohm resistors in the Johnson VFO's). So far the only place I could find them is Allied Electronics, but they seem a bit pricey and I need to order at least $50 worth. I only need about a half dozen or so. Does anyone know who sells this quantity that won't cost me $50? Thanks & 73 de Jeff WA1VQY@COX.NET

## 1423. Clegg FM-DX Displays

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-07 15:21:41 UTC
From: garyh <webpub@fastmail.ca>
Message-ID: <1103_1013095301@basic.bs.webusenet.com>
Source record: 44751

Does anyone knw what 7 Seg. LED will work in an old Clegg
FM-DX 2 meter radio. These displays were a high failure part
so I know someone has found them. Anyone able to help?

Thanks,

Gary

Source record: 44753

I just bought a Heath SB-401. It must have been previously used with
the matching receiver because it does not have crystal Y1 through Y8.

I need these crystals to use it in stand-alone mode with my R390A/URR.

Any help would be appreciated.

# 1433. Racal 1255 shipboard system: Info wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-07 17:55:04 UTC
From: kludge@panix.com
Message-ID: <a3uf1o$9ru$1@panix2.panix.com>
Source record: 44761

I seem to be working on a Racal 1255 transceiver system, and while it isn't old enough to really classify as a boatanchor, I think the watts/pound ratio is low enough and the inability of the manufacturer to support it should count for something.

I have no documentation on any of this stuff, and Racal has been less than helpful. This is what I have:

Type 1255 Transceiver System:
MA4178 power supply (4 of them)
MA4015 filter unit (2 of them)
MA4156 transceiver unit
MA4921 Power Interface (?)
TA4034 400W PA unit
Metal brackets holding these together are marked MA989/3
RA1792 receiver (w/ funny card for xmitter control)
MA1101 Preselector (?) for receiver.
MA4935 Control Head (just marked 1255 Control Unit)
MA4926 Interface unit (2 of them)
VRA549 AAMTU (we are supposed to have this but I can't find it)
MA4114 Low-Pass filter (harmonic filter for transmitter)
MA4928 Hybrid Unit (again I don't see one)

VCS units-- Enclosures Type 3F with WCU 3/S built by Aish Technologies in Poole for Racal (Thales). These things have KPT connectors for handsets and keys, and I have no clue what the pinout is.

The only thing I have full documentation on here is the RA1792, and I fear that the documentation I have does not include the control card which is used to remotely control the MA4156 from the RA1792. This system was only sold to the Royal Navy and the RN Museum has been helpful but does not have any technical documentation on this gear.

If anyone out there knows an old RN brass pounder who might have run off with manuals, I'd really appreciate any information out there.

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$375.00 plus shipping and insurance from zip code 76001.

# 1436. HP 200T Info

Info on Hewlett-Packard Audio Osciallator ("Test Oscillator") Model
200-T

I recently pickup up, in a trade, a HP 200T AF osc. A friend tells me
that this
might the the first model of test equipment made by HP and therefore
a real collectors item.

Any suggestions on where to find out more info?

This was a version designed and intended for telemetry purposes. I do
not know the special requirements or features that make it suitable for
this purpose but it is far from HPs first audio oscillator.

I've heard that some kind of special cables are required when cabling up Drake 4-Line twins. Would this be some kind of low capacitance coax, or what? Is this really necessary, or would I do alright with typical shielded audio cables, or even RG-58 coax? Opinions?

I'm going to be setting up a C-Line station soon.

It is, but there are thousands of them out there, so it's not really
worth anything as a collector's item. Your local HP office should have
the service manual on fiche.

The 200T is less stable than the 200CD, but it's still usable. Higher
distortion too.

The original 200 (no suffix) was HPs first audio oscillator, but the
general design lived on in the 200A, 200B, 200C, 200CD, 200R, 200T, etc.
units.

# 1452. Morrow 3 BR-5 3 band converter..converts AM car radio to HF

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-08 00:17:51 UTC
From: ve3ab@mondenet.ca
Message-ID: <3c631862.1765074@news.mondenet.com>
Source record: 44780

I have a converter..and im wondering what it might be worth to anyone etc. It is a Morrow (Salem Oregon) Converter that covers 80/75,20 and 26.5 to 30 mcs in three bands..it is about a 6.5 to 7 on a scale of 10. Someone bolted a small power converter to the side and the dial string could use re-stringing. I might be interested in trading for something ..if someone is interested in it...73 Earl VE3ab

have a swan 250 and speaker / power supply.
also have an extra power supply with the DC
invertor on it for mobile use. have manual too.
no microphone goes with it.(keeping it)

works great ! have made hundreds of qso with
this rig the only thing wrong with it is it is DUSTY
from sitting. tried it a few days ago, still works fb.

I am looking to trade up to a 706 or a DX70
preference will be given to trade up deals before
a cash sale.
thanks.............................Bruce

I have a Hallicrafters S-107 receiver for sale. It includes a photocopy of the service data manual. It's a Mark I in good condition. Cosmetically I'd say it's about an 8 but it seems to work well. It's all original, no extra holes in the panel or cabinet. Original paint with some scratches in the cabinet but no dents. Most of the lettering in the middle of the chrome strip on the front panel is worn off but all the other panel and tuning dial lettering is in good shape. Original knobs. It could stand a good cleaning and probably an alignment. Price is $65 plus shipping (about 20lb from 85234). Paypal, cashier's check, or money order. I can email pictures if desired. Contact via email if interested; markem@cervnet.com

Yes..one must first register with eQSL (even if you never use their
services) to read about this great eQSL / DXCC news breakthrough....

# 1485. Transformer info needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-08 21:37:10 UTC
From: Gary Schafer <gschafer@mediaone.net>
Message-ID: <3C644453.4FF64B69@mediaone.net>
Source record: 44714

I wonder if anyone can help identify a transformer for me.

It is a plate transformer with what looks like a hypersil (sp) core. It has a single primary with 3 taps. Not sure if it is rated for 120 or 240

volts. With 120 volts I get 1900, 1770 or 1685 volts out. No center tap on secondary.
The only numbers on it are: AA 3883 and S179027. Do those numbers mean

anything to anyone ?

It is probably mid 70s vintage.

Also does anyone know how I can tell if it is ok to run on 240 volts rather than 120 volts other than amount of smoke?

Thanks
Gary K4FMX

# 1486. FS: Yaesu FT-101ZD

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$375.00 plus shipping and insurance from zip code 76001.

Hi,

Have a customer looking for an Antenna Relay for a Tempo ONE (1) rig. Anyone have such a critter or know where to find one? OR, do you have a junker laying around with a good matching relay, to sell?

IF you have information, please e-mail me direct and I'll forward it to them.

Thanks.

For Sale ----- Drake R-4B Receiver. Not perfect but not a dog
either. No major cosmetic problems. Electronically the rcvr works.
I have heard signals on all bands using a piece of wire for an antenna
(indoors). A good antenna (and maybe a peaking up) should improve
things quite a bit. Comes with manual (just purchased
reproduction of "original manual), four SWL crystals, crystals
taht came with radio originally (80/40/20/15 meters and 28.5-29.0
mHz) plus crystal for 1.5-2.0 mHz (160 meters). Would not selll
this except I just bought a new Kenwood TS-570 ..... need to pay
down credit card !

PREFER you pick-up but willl ship via UPS.
Will have it boxed properly at Mail Boxes etc type place
and shipped at your expense.

Paid $250 -------- asking $ 200
plus packing/shipping

From: Presley Travis <presleytravis@nexet.net>
Message-ID: <3C6570A8.E062CE6C@nexet.net>
Source record: 44743

Anybody on the group know what is used in the turnscounter to keep
tension on the cam? Mine is missing whatever it is that makes it turn...

looks as if someone used an rubber band as a band-aid fix...long ago
dry-rotted. Perhaps an spring.
Thanks in advance,

KA4NNN

I don't think there is much relationship between the AX-190 and the R-599 except they were made by the same manufacturer! I do have both the Ax and SX 190's. Pretty decent receivers for what they are! I have also owned two R-599D models. A very fine receiver but in a way different class than the AX an SX models!

BTW, I need a concentric knob set for the AX series radios. Anybody have one to sell?

I want to thank you very much all who replayed ..
I have excluded static electricity.
Counter weights are in place covered with glue-like stuff (it seems to be a kind of wax..)
Pivot gear seems ok within kilters, in line and centered.
Spring seems ok as the instruments measures correctly.

I didn't feel to be able to work on it without producing additional hurting.
Yesterday, I have brought it to a laboratory for service.
Still, thank you!
Ciao.

The correlation is that I think they had the same weak front-end. The
same mod fixes that in both models. The R-599D was head and shoulders
above the plain 599.

I can't figure out the connection either, and when I just went back
and looked at the thread, I can't figure out where the 599 came into
the thread.

I did look a few days ago for the article in 73 on "improving" the
AX/SX-190, but I couldn't find it. I thought it was mid-1975,
but I couldn't find it. Of course, my magazines are not all together,
so I may have simply missed it. November 1977 also comes to mind,
but I couldn't find it either. I do recall some modification article
about the 599, though maybe I'm just imagining it; but it would have come
after 73 went to the larger format.

Again, I sure wish the magazines would put their cumulative indexes
on the web. It sure would make it easier to find old articles such
as this, and they could use it to sell off back issues, or to sell
photocopies.

Michael

I think it was my fault. I made a post 'equating' the two.

There's a copy of it on its way to me in the mail. At least I think its
the same 73 article. My recollection was that it wasn't an actual
article per se...just a short blurb. I've had some people scouring 73s
for me and it hasn't turned up.
Anyway, although I hate to modify rigs just for the heck of it, this was
a very worthwhile mod. They should have recalled all those receivers
back to the factory and done it for free :-)

-Bill

## 1529. Wanted Collins Tuner

# 1530. FS: Heathkit DX60 transmitter and 40m mobile antenna

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 04:10:51 UTC
From: heathtx1960@yahoo.com
Message-ID: <u6bsmb9qmbue93@corp.supernews.com>
Source record: 44658
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

When I was younger, I wanted to get into pirate radio. I actually bought a 1960 Heathkit DX60 transmitter with a crystal (think it's in the 7015khz area, haven't looked in a while) and a repro manual and the 40m mobile antenna to go with it. But time went on and I got disinterested in the thrill of breaking the law, and then Sep 11 happened, so I thought I probably should get rid of this stuff since I'll never use it. The tx was tested good when I bought it but only put out 20w. I replaced two tubes-a 6CL6 and the 12AX7, I think-so it should be fine unless a cap has gone bad. I took out the original mic plug and tried to shove in a 1/2 plug for a mic that I bought. Besides that, it's all there. The antenna is a Radio Shack 40m mobile antenna with mount, never had RF applied to it. The end of the cable is stripped but it doesn't have a PL259 (or any) end on it. The transmitter comes with the crystal and W7FG repro manual-all for $100. The antenna is $50. Email heathtx1960@yahoo.com which is a temp account I set up to divert the Chinese porno spam and whatnot. Email there and I'll contact you from my real account. Bryan in Sacramento, CA

# 1531. STEREO Stoddart NMA-5A's BIG BOATANCHORS!! Photos and Article.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 04:45:34 UTC
From: radiorob@rogers.com
Message-ID: <rlub6ucndlauop9d40sab1bnonl7s3hsle@4ax.com>
Source record: 44659

Hello Folks:

This Story starts a Long Time ago, when I first Started Collecting BoatAnchor Radios around 1977. A friend of mine had a obtained a Real Neat Boatanchor Radio from "Buckland's", the local Surplus Store here in London, Ontario CANADA. When he invited me over to see it, I decided I just had to have it!! I had never even heard of the Manufacturer, let alone ever seen one, but it was just too cool to pass up! After a lot of Haggling we decided on a Trade. I would give him 2 RCA AR88's in working condition, and he would give me the Mystery Boatanchor!! I really hated to part with the 2 AR88's....but I knew I could find another 88 with a little looking......The new Receiver was probably a Once in a Lifetime Find, at least that was what I thought!

I was now the proud owner of a STODDART NMA-5A, Made in Hollywood, California in 1949!! I really didn't know exactly what it was back then, but the Original Manual said it was a "Radio Interference and Field Intensity Meter".....But it operated as a Receiver. It was Big, Weighed a Ton, Had a Pile of Knobs and Controls, and was Basically like new. I was lucky to also obtain the Original Manual, which helped me to understand that this was a "Labratory Grade" Instrument made for Commercial and Military Use as a "Noise Source Detector". To quote the manual..." The NMA-5A Radio Interference-Field Intensity Meter is a High Sensitivity HF and VHF Radio Receiver used to locate and measure RF Interference (Noise) and includes accessories to make Field Strength measurements in the 15 to 400 megacycle portion of the radio spectrum".

The manual showed that there were a Lot of Accessories that went with the Receiver, but all I had was the HF Expandable Dipole, and the VHF Plug in Head. This Receiver covers 15 to 400 Mcs in 4 Frequency Ranges, 15-31 Mcs, 29-64 Mcs, and 60-125 Mcs with the LF Head, and 88-400 Mcs with the VHF Head. The Receiver is a SuperHetrodyne type. The Total weight of all the equipment including accessories is 159 Pounds!!

I have had the Receiver now for 25 Years, and have used it off and on for FM Listening on the Commercial FM Band, and for DX'ing the VHF Bands during High Sunspot Years, but mostly it has just adorned the shack as a Conversation Piece .....it always attracts a "What the Heck is That??" whenever another Boatanchor Enthusiast comes over!

I have tried to obtain more Info on the Receiver, but in the past 25 years, I have never found another person who has owned one of these...or even saw one for that matter. I have found a few other

Stoddart Owners, but not of this model. Stoddart made 7 or 8 other Models of Various descriptions, but most were smaller than the NMA-5A. There have been a few Tidbits of Info written on this Company over the Years, but for the Most Part, this is a seldom heard of Manufacturer!

Remember I obtained this receiver 25 years ago, and figured it was the Only one I would ever see??? Well.....Late last year, I got a Phonecall from another Boatanchor Friend of Mine, Dave "VE3ZZY", advising that another friend of ours Dave "VA3DN" had been asked to dispose of an Estate...and Guess what he found?? Yep...another Stoddart NMA-5A.....Just like mine, in like condition. Not only did he have the Radio, he also had all of the Accessories that I was missing!! The Loop Antenna, the UHF Dipole, The Measuring Stick for the Dipoles, and the Rotary Converter Box for Battery Operation! Now I figured what were the Chances of these 2 Receivers ending up in the same Place so far from Hollywood?? Turns out the Owner of this Radio also purchased his NMA-5A at Buckland's...back in 1977...so these were Twin Brothers!! As it turns out, the Serial Number of my Receiver is 166-37, and the other Receiver is 166-38, so these came off the Line one after another...and somehow ended up in our Local Surplus Store some 30 Years Later!!

So...to shorten the Story, I am now the Proud Owner of the 2nd Receiver, and 2 Lost Brothers have now found a New Home here at VA3SW Land! I'm afraid to say that there are probably no more of these around, as I don't think I have room for another should it surface sometime in the future! The Only Accessory I am missing is the Collapsable Wooden Tripod for the Antennas, and believe it or not, I have Located that too!! Right here in London in the Hands of another Local Ham who Purchased it back in the Late 70's from ....Yep you guessed it..."Buckland's Electronics Surplus!!". I haven't been able to convince him to part with the Tripod yet, but hopefully someday it too will be Re-United with the Twins!

If there are any other Stoddart Owners out there, especially NMA-5A Owners....I would be most happy to hear from you. Anyone with any information on these Receivers, or Knowledge of them, please contact me as well. I don't know what the Original Price of these Receivers was...But I'll bet it was BIG $$$ especially back in 1949 Dollars!

Below I have included a selection of Photos of the Receivers and the Accessories so you can enjoy them too!! Just click on the URL's below..and they will take you directly to my Webpage where the Photos are Stored!

Hope this short Article has Spurred some Interest in this seldom seen Boatanchor!

From: Don Schichler <schich@frontiernet.net>
Message-ID: <u6d1k5fc6f06d8@corp.supernews.com>
Source record: 44661

I have for sale a Hammarlund Super Pro SP-600 receiver in very good condition. I don't have a cabinet for it but it does have a top cover. The paint is original and in good shape except for some flaking around the headphone jack and a couple little nicks here and there. It has a yellow serial number stamped on the front, probably by the Air Force. I have the original Air Force tech manual for it. The last time I used it was about 2 months ago, and everything worked fine. I'm asking $350 and would prefer to have it picked up here in Rochester, NY, or maybe I could meet you half way. If necessary I could arrange to have it shipped at the buyer's expense. I have several pictures I can send by email if requested.

73,
Don K2FY

# 1534. Complete HF Station

Newsgroup: rec.radio.amateur.boatanchors

Source record: 44662
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

hello,

i have for sale a complete swan 500 station. the station includes:

1) Swan 500 transceiver 150+ watts out on 80m about 80 watts out on 10
2) model 410 external vfo
3) 117xc power supply
4) sure 444 desk mike with swan logo
5) swan model 3000 2000 watt meter
6) model 22b vfo adapter
7) model vx-2 vox unit
8) model fs-1 field strength meter.
w7fg copy of manual

only mods that has been done is a muffin fan wired to jones plug that sits on top of finals and the speaker is wired for use with a dsp unit. muffin fan comes on when rig is turned on. this equipment is very clean and in service at my station. this equpiment is not "mint" because it is not brand new. i can email pictures on request and you judge for yourself. on air test could also be arranged, conditions permitting.

i want a heathkit hw-9 qrp rig with the warc bands. would also like to have the matching tuner and wattmeter. if you have one i may be able to put a little cash with this to make the deal.

cash price is best offer over $325.00. it took me over 4 years to get all this equipment together. alot of equipment for the money.

73 mike

# 1536. Cessna 300 Nav/Com radio information/schematic wanted

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 15:36:15 UTC
From: robert.mclean1@sympatico.ca
Message-ID: <3a4bbf6a.0202100736.6a2158e6@posting.google.com>
Source record: 44664

Hello :
I hope this message is not too far off topic, since the radio in
question does not cover amateur bands per se, but perhaps someone
can point me in the right direction.

I have a type 300 Nav/Comm radio for Cessna aircraft that has been cut
up by a
previous "restorer". I do not know the full model number, since what
ever
label that may have been printed on is now gone.
I do know it is not 316 or 384, since they are both solid state
versions.
Mine is all tubes, including about 16 nuvistor type tubes which I
think
places it in the 1960-1965 time frame ??

Can anyone tell me where I might find information about this radio,
particularly a schematic ?
Also, is there a newsgroup for old aircraft radios ?

Thank you.
Robert McLean

# 1538. WTT: vintage diodes and transistors for vacuum tubes

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 15:47:50 UTC
From: "NO***SPAMcaustic NO_SPAMseattleu.edu"
Message-ID: <3c669164.156124240@news.qwest.net>
Source record: 44665
Cross-posted to: rec.audio.tech,rec.radio.amateur.boatanchors,alt.ham-radio.marketplace

I have a large stock of old NOS diodes and transistors from various manufacturers (WECO, GE, Hoffman, IR, GI, RCA, TI, Etco, Delco, etc.) dating from as early as 1950 (WECO 400A diodes), to no later than 1973 (a few TI power transistors). The majority of my stock is dated between 1958 and 1966, with quantites of WECO diodes specifically dating to as early as 1950.

However, I'm currently trying to get more into vacuum tube design, and I am interested in trading off my diode and transistor stock for vacuum tubes. The types that I am interested in trading for are:

NON russian/chinese 2A3, WE 300B, RCA/Taylor 866A, RCA 01A, Mullard/Telefunken Ecc83/12AX7, Mullard/Telefunken EL34 or EL84, RCA 5691 or 5692 red base, GEC, Genalex or Tung-sol KT88/6550 or KT66/5881, RCA Command 5751, or GE/RCA 6L6GC.

If you're interested in trading, please contact me and we'll see if we can work out a deal! Below is a list of all the diode and transistor types that I currently have, with quantities:

Source record: 44668

Hi all, have 6 pieces as a complete station in real good cond. for sale or would consider splitting. 1- FT-101E (plastic still on front), 1-FL-2100F ( plastic still on front), YC-601 digital display, 1- YO-100 scope, 1-landliner, 1-ext speaker ( a little ruff, thrown in as extra bonus), 1-Yaesu Watt/swr meter. Sold complete= $1100.00 buyer pays shipping. I will package well in separate boxes at no charge. Will sell separate but won't split transceiver and dig. readout. Please e-mail me with your replies. porky@cfl.rr.com . Thanks........"Porky"

# 1541. Wanted to buy or trade National HRO coilsets

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 17:40:56 UTC
From: jonweiner@aol.com
Message-ID: <20020210124056.02598.00000801@mb-fi.aol.com>
Source record: 44669

I am looking for the following very good to excellent condition older National HRO coilsets: JA, JC, and JD. Would also consider regular A, B, C & D coilsets. Must have black wrinkle finish and data plates must be excellent. Have to trade 2 of the rare "E" coilsets for the broadcast band and 160 meters. Cover 900-2100 KHZ. One is black wrinkle, other is gray (as used in the HRO-7). Both can be used in both earlier and later HROs.

# 1543. FS Racal RA-17C-12 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 17:51:21 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <tqy98.32277$3E5.2292178@newsread2.prod.itd.earthlink.net>
Source record: 44670

Racal RA-17C-12 Communications Receiver for sale. This is the North American Version with American Tubes, S-Meter, More Audio Output, Coaxial Connectors, etc. It is all original. It is in very nice shape with top cover, copy of manual, and Racal Brochure. Stability is super with the Wadley Loop. See on page 329 of Osterman. It is listed as "scarce". This is one of the best receivers I have ever used. This one works exceptionally well. I need some room, so it is up for sale.
Price is $700 pick up in Abilene, Texas or I can meet someone within 200 miles of Abilene. I really don't want to ship this thing. It is just too heavy.
Digital Pictures are available of this receiver upon request.
Thanks, Charlie Hugg, K5MBX
Abilene, Texas

# 1544. B&K model 700 Mutual conductance tube tester

# 1546. FS: Johnson Adventurer & Heath AR-3

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 18:48:27 UTC
From: k9sqg@aol.com
Message-ID: <20020210134827.12762.00000530@mb-bd.aol.com>
Source record: 44674

Selling a nice novice or nostalgia station.

Adventurer needs a new line cord. I can't test it since I don't have any crystals. Exterior is about an 8-8.5. Meter is flaking paint but it could be removed, the glass masked, and repainted to look like new. One of the tubes is an original Johnson and may in itself be a collectable. Have a copy of the manual.

AR-3 is also about an 8-8.5. It receives stations on all bands. Has some hum which is usually a dried out electrolytic that can be easily replaced. Beyond that, don't know what to say. No manual but they are readily available.

Selling the pair for $110. Cannot ship outside continental US. Reason for selling is that time and my leg joints do not permit me to go up and downstairs frequently to configure the station, get them into mint condition, and operate the station.

Thanks for reading the posting and have a good week.

Evan

# 1547. Hygain Tri-Bander (Junior) FS or Trade

Hi. I have a Hygain Tri-Bander (Junior), 12' boom, 10/15/20 meters. Was garage kept most of it's life. Aseembled once to test, JA land contacts made with excellent results. Looking for a working AM transmitter, Heathkit DX-100 (b) or? Pick-up in The Dalles, Oregon only. Too big to ship. Thanks..Jim

# 1550. Wanted R1475 receiver information

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-10 19:26:42 UTC
From: g8ebm@compuserve.com
Message-ID: <e7e176dd.0202101126.43bd4885@posting.google.com>
Source record: 44677
Cross-posted to:
uk.radio.amateur,rec.radio.shortwave,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.antiques.radio+phono

About 35 years ago I had an R1475 short wave receiver (2 to 20MHz). At that time a large batch were released by the Ministry of Defence onto the surplus market and I used it for about five years for general short wave listening and then disposed of it. Recently I have acquired another R1475 and I intend to fully restore it to "as new" condition. As part of this interest I would like to collate as much information about the receiver as possible. I intend to create a web site specifically for this receiver.

The R1475 (also known as receiving set 88 when used with its 360B power supply) was used by the British Royal Air Force some time after WWII. I understand that it was used as a ground station receiver, although the 360B PSU does allow 12v DC operation. I do not know if any other service used this receiver. . . Do you?

I would be particularly interested to exchange emails with people who used the equipment whilst it was in service, maintained them or were even involved in the design or manufacture. I would like to get some firm indications of the dates that the receivers were in service, where they were used and for what purpose. Any reminiscences on the performance and reliability of the receiver (good or bad) would be great. If you have any photographs of the radio in use that would be wonderful !

Also if you own one now then I would be interested in exchanging information.

If you have any information about the receiver then I would be interested in buying or copying it. Scanned images would be gratefully received. I might even be interested in buying some other R1475 units as a source of spares.

Please contact me directly g8ebm@compuserve.com or reply to the newsgroup.

Many thanks and lets see if we can document this receiver before everyone forgets it !!

Regards

Steve G8EBM

## 1551. FS Swan 350 price reduced

Newsgroup: rec.radio.amateur.boatanchors

FOR SALE:

Central Electronics Model 20-A Transmitter.
Phasing type SSB transmitter from the
earliest days of SSB. This rare example of a
complete and near-immaculate 20A is in
collector-quality condition and includes all of
the original knobs etc.
A great candidate for the addition to any serious
Boatanchor collection. Picture available.
Will sell for $140.00 plus shipping

Swan 250C 6 meter SSB transceiver, in near mint
condition, with original microphone, original
manual and excellent 117XC power supply.
Pictures available.
Will sell for $275.00 plus shipping.

COMMAND SETS
R-26/ARC-5 Receiver - Covers 3.0 to 6.0 Mc. Black
case, complete with all covers.
Four of the tubes are missing. Otherwise looks to
be in very good condition.
Unmodified. Will sell for $30.00

BC-459A Transmitter covers 7.0 - 9.1 Mc. Black
case. Dial is missing
Rotary coil etc. are in good shape. One small
cover is missing -
Bottom cover and case are both present and in
good condition.
Otherwise looks to be complete and in very good
condition.
Will sell for $30.00

BC-457A Transmitter by Western Electric. Covers
4.0 - 5.3 MC.
Silver case. Small cover missing from above RF
finals.
Otherwise looks to be in very good condition.
Unmodified. Will sell for $30.00

BC-465B Receiver Western Electric - covers 6.0 to
9.1 MC. Silver case - comes complete
with all covers. Missing 5 octal tubes. Otherwise

looks to be in very good condition.
Unmodified. Will sell for $25.00

ARC-5 Transmitter by Stromberg-Carlson - covers
3.0 to 4.0 MC.
Black case. Complete with all covers and all
tubes.
Otherwise looks to be in very good condition.
Unmodified. Will sell for $30.00

BC-733F Receiver with dynamotor DM-53A for 28 V
DC operation.
Black case, complete and in good shape. Has
service and inspection tag from 1959.
Comes with the connector and the original
shockmounts.
Looks to be in very good condition.
Unmodified. Will sell for $30.00

R-268/ARN-5B Receiver - Black case, similar to BC-
733F, but marked for 24V DC
and no dynamotor. It's all there including the
shock mounts and special
bayonet connectors. Looks to be in very good
condition.
Unmodified. Will sell for $30.00

Electrovoice HIGH IMPEDANCE mobile microphone
model EV-600H, new in box with warranty card and
instruction sheet.
Nice unused coil cord. Never used mobile (grin)
Picture available.
Will sell for $30.00 plus shipping

Radio Handbook by W6SAI, 19th Edition in
excellent shape. Hardbound volume.
The essential reference for amateur radio.
Will sell for $15.00 plus $2.00 postage.

Hallicrafters S-40A communications receiver
Serial number HA-90221
Nice receiver - All original, with a fine looking
front panel.
Original knobs, dial etc. Covers 540 kc. to 54
MHz in four bands,
with sensitivity control, AVC on-off, tone
control, noise limiter,
BFO and send-receive switch and rear terminals.
Also has front panel headphone jack.
Built in speaker. The set lights up and appears
to be working but has a loud hum. Likely just
needs a capacitor replaced.

Will sell for $75.00 plus shipping

Hallicrafters SX-25 Defiant
communications receiver
Serial number H-101192. Main tuning plus
bandspread for the amateur bands.
Covers 540 kc. to 32 Mc.
in five bands. Has AVC, BFO, Sharp & broad
filters, crystal selectivity
and phasing controls, RF and AF gain controls,
tone control, send-receive switch and
rear terminals. Also has front panel headphone
jack.
Will sell for $140.00 plus shipping

National NC-190 Receiver
This is nifty old receiver with that classic
space age blue finish.
Front panel looks very nice, but some of the
knobs look crusty and need cleaning.
Appears to be all original with no modifications.
Receiver is non working but it is all there, and
will clean up nicely. Picture available.
Will sell for $125.00 plus shipping

Shipping additional on all of the above rigs etc.

# 1556. Re: STEREO Stoddart NMA-5A's BIG BOATANCHORS!! Photos and Article.....

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <3C66E4C3.7A0C8F97@mississippi.net>
Source record: 44684

nice story. I don't know anything about the NMA-5s... I do have an NF-105 - which is a later "descendant" of the NMA-5. Actual this one is my second - as I had a *mint* unit that I bought surplus from the government in 1975. I let a "friend" talk me out of it in 1977, I've been kicking myself since. I picked up this NF-105 recently when a company that used to supply parts for the government as a back-up contractor for Collin's R-390 sold off some old test equipment. I have the low frequency antenna kit (LM-105) and several plug-ins.

Your story reminded me that I do still need 2 plug-ins for my unit... The TX (14-150Khz) and the T1 (20 - 200Mhz). Anyone have either they would care to part with?

Best regards...

Hello,

I just bought a Drake UV-3 (with all three modules) at a hamfest today. I noticed it has one problem.

Under the Phase Det/Ref plug in board in the front of the radio, there is a 1 watt resistor which is mounted on the mother board and is burned. The radio still operates, but the color codes are burned off the resistor. I suspect it must be a low value to still be working. I would like to replace this part since it will fail sometime.

Does anyone know the purpose of this resistor and its value?

Hi Steve.
I was on National Service Radio Ops course in 1955. After 26
weeks basic
course at RAF Compton Bassett we went on to further training. 18 to 25 words
per min cw.
They were used in training classes at RAF Wythall near Birmingham.
Was not to experienced then in receivers.
We got AR88s when I got to permanent camp in Germany.
Wonder if anyone else reading this was at 755 Signals
Unit,Hambuhen,Germany.55/56

I have for sale the following items.

Hallicrafters SX99, looks good, works good, dials yellowed, all knobs are original and has been recapped. A good performer, asking $115 plus shipping.

Hammarlund HQ-110A, looks great, receives but could use some help. Knobs look great, no clock or filler plate installed. Not a piece of junk, displays great. Asking $80 plus shipping.

Servo 5200-A2 vhf/uhf receiver. Circa 1955 50-200mhz, am-cw-fm with squelch, rackmount 8 3/4" panel, top and bottom covers, manual. Works well, looks decent, not beat up. Asking $80 plus shipping.

AN/URR-44 R-892/URR-44 Receiver, AM only, .54-18 mhz in 4 bands, internal speaker, possibly a morale receiver? Navy unit, has its own cabinet with shockmounts. Measures 12"h x 18"w x 18"d, looks and operates good, could use some cleaner in the pots as I recall. A unique radio, I'm asking $95 plus shipping.

Sorry, no pictures available so please don't ask. All receivers guaranteed not DOA but are sold as is. Shipping charges are from zip 65301, no boxing or handling fees, money order only. Email direct if interested, thanks for reading.

Does an HRO-500 count as a boatanchor? It's heavy enough - but can a solid state/synthesized RX be a boatanchor?

BTW, very nice pics of one at:

:-) This came up not too long ago and as I recall, the rx was poorly respected enough to qualify. Most SS radios of that era meet that standard.

I would count it as a BA. I may be wrong, but I doubt this radio is synthesized -- the MHz band is selected by phase-locking the first LO to a harmonic of a crystal, but the KHz tuning is done with a dial, which I'd bet is geared to a good old variable capacitor.

Having real analog tuning caps or slugs goes a long way in my book towards making a radio at least an honorary BA. But of course it should be big, rugged, and heavy, and the HRO 500 probably just makes it over the line there too.

How about a FRG-7 or Drake SSR-1? All analog tuning (Wadley Loop), but not quite heavy enough. Still, they're classic radios and I like to see them discussed here.

# 1581. Question... using Drake T-4XC with Heathkit p/s?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-11 13:25:42 UTC
From: k5dh@raytheon.com
Message-ID: <qDP98.214$Bd4.2655@dfw-service2.ext.raytheon.com>
Source record: 44609
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Okay, guys, I'll show my ignorance...

I've heard of folks using Heath HP-23 series power supplies with Drake 4-Line gear. I have a T-4XC that needs juice, and I have a homebuilt power supply that's a very close copy of a Heath HP-23 (the transformer is from a junked SB-401). The high B+ output from the p/s is about +825 vdc. The specs on the T-4XC call for a high B+ of +650 vdc. The low B+, bias, and filament supplies match up just fine. What about running the T-4XC with that much voltage? Can I just do it, or am I running the risk of damaging the Drake? Is there a decent way to mod the power supply to provide a lower voltage? I could build a resistor voltage divider network, but that seems kinda crude and wasteful of power. I'm not afraid to hack on the p/s, since it's homebuilt and not the "real thing", so there's no "collector value" involved. Anyone wanna offer free advice?

Another question... there's a mod on the BAMA to replace the 6JB6's with 6146B's. Have you done this mod, and would you recommend it? Sweep tubes are getting scarce and "spendy", thanks to our 11-meter friends, but 6146's are still cheap and plentiful.

73,
Dean, K5DH

Source record: 44610

There have been in the past a nuber of threads discussing subsitutes for the 6jb6a tubes. I have experience using the 6gj5a tubes which were much cheaper than the original tubes when I bought them----to make them work you have to clip off pin 8 on the tube itself----(Dont butcher the socket). Also need to reneutralize. They wont work in the TR4 series in trios, just in pairs in the T4 series.

Havent considered the 6146 mod, but there is a very good website on this at

http://www.qsl.net/k5dkz/

# 1585. Applying ext. ALC to IC-735, pse help?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-11 17:42:39 UTC
From: Richard J <no.flame@no.spam.se>
Message-ID: <a4901d$4t0$1@news.lth.se>
Source record: 44613

Hi group - I know the IC-735 may not exactly qualify as a BA - yet - but unless I fix this issue, this particular rig certainly will be a candidate.....

I need to know the ALC voltages necessary to bring down the output of the TRANSVERTER jack, in order to drive a transverter with a lot less power than the stated "30mV" - whatever that measure came from (user manual). I plan to do this thru the ACC 2 jack, pins 2(GND) and 5(-V).

2 questions arise:

a) does ALC limiting affect the transverter output at all, or does it just shut down the output stage of the rig more or less?

b) I *guess* from past experiences that we talk about applying a negative voltage in the order of 0V-- -4V or so. I need to get this verified, and also need some kind of table where ALC voltages and the corresponding power reductions are shown. I need to prepare this ALC supply as best I can without having the rig here, and it has to work at first try (long trip to rig, no tools/components etc on site)

maybe c) I also guess we are talking small voltage increments for drastic changes in output, 0.1V increments or less? Time to chase a 20-turn pot, but what value, and what power source (internal 13.8V may or may not be good candidate, you tell me?)

Anyone with precise knowledge (or any other useful info) abt this issue would be a welcome guest on my screen.

Cheers from Sweden /73 Rick, SM7SCJ, somewhat technically challenged

Of course the HRO-500 is synthesized; that PLL used for the first
local oscillator is replacing 60 or so crystals with a single 500Khz
crystal.

I suspect what category you put it in depends on how you view a
boatanchor. For some, it's just something older than a certain
age. If you think a boatanchor has to be say, 25 years old or more,
then with each passing year new rigs can fit in the category.
If you think it has to be made before a certain year, then it's more
definite (and since there were plenty of other rigs made even later
than 1964 which nobody would deny the name "boatanchor", then surely
1964 is boatanchor material). Some would say it has to have tubes,
and presumably heavy. Others would say only really heavy, and perhaps
even not all that useful (some WWII surplus clunkers come to mind).

I think an HRO-500 fits into this newsgroup a lot more than some
of the later rigs that people mention or try to sell.

It replaced the 1154/1155 and was superceded by the RA17. It was
manufactured by Marconi and served in RAF as a fixed and occasionally
mobile receiver. I have heard they were used in tanks, but I don't think
this is true, although they did have a shock-proof mounting.

I remember them well. The horizontal drum with the graph cursor and
the plug-in guard unit. The receiver was constructed with replacable
modules inside the case which plugged into octal valve sockets, if
memory serves.

I was trained on them at Cosford in 1957 and used them for fixed station
work up until they were replaced by the RA17 around 1961.

I remember buying one in the Thieves' Market in Singapore around 1962,
along with an HRO and an AR88. I had to build a power unit for it as
it didn't have the PSU 360, which was a dual mains and 12V vibrator
unit.

However, oddly, when I was doing comms for the Leuchars Mountain
Rescue Team in 1963, the vehicle was equipped with an 1154/1155.
(MQK22 working back to GFF/Edinburgh Rescue ... nostalgia ...
those were the days ... CW only of course).

Hello,
The ALC might not control a stage that far back. Did you consider using
a small attenuator. Once you choose the db of attenuation needed place
it in line with the xvtr transmit output. The receive runs on a separate
line if I remember correctly.

Don't get me to lying, but I don't see why it wouldn't run ok with the 825v. But I haven't looked up the specs to 6JB6's as far as the max plate voltage you can use. But if they couldn't handle 825v, I'd be surprised really. Yes, I've seen circuits on switching to 6146's, and have one somewhere, but have never tried it. I do know a guy here locally that converted an old TR-3 to 6146's and he said it did ok. I much prefer 6146's as the plate dissipation is 35w instead of 17 or so watts for the 6JB6. I used to run a HW-100 with about 1050v b+. Had no problems at all, and it would do a solid 125-130w all day long. I think the norm was about 825-850v as is your supply for heathkits. My TS-830 runs about 900v with no load if the meter is accurate. I have a set of drake twins, but I don't know if I ever bothered measuring the B+ on the power supply or not. I think it was about 700v in the real world with no load if I did... MK

I have an FRG-7, and it's way too light to qualify as a boatanchor. In addition, the electronics are all on a small circuit board which takes up about one-third of the interior area. I bet it would float for a long time before sinking and just doesn't make you think of a boatanchor.

The person selling the HRO-500 was also selling a 51J-4 and said that the radios weighed about the same.

Maybe there should be another term to describe early solid state radios - other than "lousy". Besides, with an added-on xtal filter, the FRG-7 is a pretty good radio.

Message-ID: <xJY98.9126$NP4.1105012@news20.bellglobal.com>
Source record: 44623

Don :
Short answer : I need a schematic diagram and a parts list. Later I may need more details from a service manual, but right now I do not think that any alignment adjustments have been fiddled with, and I am hoping that I will just have to wire this thing back up and replace any bad tubes. My objective is to get at least the Comms receiver part working.

Longer answer : This radio used to be in my fathers Cessna 150 airplane, he had it removed because it was not working so well any more. The guy who removed it for some reason had to cut off a whole bunch of wires going to the 26 pin connector at the back. The back plate or heatsink with 5 transistors and a transformer has also been totally removed, all wires cut. Theoretically I could match up most of the wires based on colour, but to be realistic about it I need a wiring diagram. I also need a wiring diagram or schematic to find out what the pin outs for that connector are, if I am to eventually hook up some power to this and do some trouble shooting, and eventually use it as a radio. One of the dial lamps is gone, and the other appears to be burnt out, so I need a part number for them. I have spec sheets for most of the tubes, and I will be able to test all of them (once I get a nuvistor socket) except for three : 8106, 8102, and 6C10, which I have not found data for. The schematic should at least tell me their pinouts and I can give them a heater check and see if I get anything at all in an emmision tester. Data sheets would be nice, but I think I can get by without. Also for tube 6C10 for which I have found pinouts but no specs. The partnumbers on the transistors on the heatsink are pretty well worn off, so
the schematic or parts list can tell me what they are.

If I can get hold of a schematic and get started on this thing I may have many more questions for you later.

Thanks
Robert McLean

the ALC type usually found with HF transceivers is feedback from power

amplifier to reduce gain if power amplifier is overloaded, so the transceiver operates with full gain (in such case - too much) and the feedback is actuated every time you speak too loud

Would suppose the ALC or ADC you request is another, which I would not recommend, but DJ9BV described some modifications to reduce power with transverter for his transceiver.

For my FT-7 I simply "bypassed" the 10W power amplifier, and the circuit was simplified to disable the 10W stage and take the signal from the pre-driver, which was 10mW in FT-7, believe it is 1W for FT-7B. For FT-902 and FT-101 signal is taken from PA grid circuit and PA valves are switched off (heater off)
See Kenwood TS-850 modifications for use with transverter DJ9BV DUBUS 92-2-pp30....

Much more efficient is to post such requests to rec.radio.amateur.homebrew

Hi Jim,
I have one, got it a few mo.s ago in a trade. Cleaned it up, checked it out, seemed fine allover. Yesterday I put it on 10m AM in the Classic Radio Exchange, made a few QSO's. The first mic I had (old one) got low audio reports. I put a good D-104 on it & later got good report from the same critical stn. VFO seemed stable on 10, AM output is low, as it's clamp tube mod, I think, but CW output is good.
BAMA, Ken Grimm's great site, has a manual, if you don't have on - free for the downloading:

# 1599. Weston Ruggidized Meter Assy 0-1 mA

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-12 03:57:56 UTC
From: derswede@aol.comspam.com
Message-ID: <20020211225756.23901.00001967@mb-fy.aol.com>
Source record: 44627

I have a new-in-box Weston Model 1521 Ruggedized Meter assy for sale. 0-1 mA movement, 8011126 serial no. on back, date coded 5311. Black face (reading by 2's to 10) and black ring, 3 screw mounting (orig screws included). Still in Weston box (probably not the original box, the s/n on the box is different). Fits a 2 1/4" opening. Had been saving it for that "special project," but the piles of stuff are getting too high and I need to eliminate some items.

"Make me an offer I can't refuse." If you want photos, email me.

Looking for an iambic keyer or a keyer module for a Yaesu FT736R.

Andrew (reply back to kg4gsc <<at>> qrz <<dot>> net

# 1600. Re: HRO-500 - boatanchor?

>Of course the HRO-500 is synthesized; that PLL used for the first
>local oscillator is replacing 60 or so crystals with a single 500Khz
>crystal.

Hmmm, how about the first VFO in a Racal 17, which also replaces 30 xtals? No synthesis there, just the operator who lines up the MHz markings on the dial and then peaks it for maximum signal.

Any radio that uses the human operator to do the job now done by a couple ICs gets extra BA votes. Of course the RA-17 qualifies as a BA by every known standard, but the same concepts are used in the 6217, a SS pizza-box rackmount that weighs not much more than a Frog.

Of course, Wadley loopers don't give the exercise benefits of switching all those xtals on an R390 or 51J :-)

>I suspect what category you put it in depends on how you view a
>boatanchor. For some, it's just something older than a certain
>age. If you think a boatanchor has to be say, 25 years old or more,

Another consideration is the maker. National didn't survive out ofthe BA era, thus National is a BA company, and its products are BAs by birthright. Same for Hammarlund.

>and presumably heavy. Others would say only really heavy, and perhaps
>even not all that useful (some WWII surplus clunkers come to mind).

"Not all that useful" is what ordinary people would call a "boatanchor." Our really favorite BAs are pretty darn useful, at least if you want to listen to SW or work hams.

>I think an HRO-500 fits into this newsgroup a lot more than some
>of the later rigs that people mention or try to sell.

I must agree with you there -- see below.

>The person selling the HRO-500 was also selling a 51J-4 and said that >the radios weighed about the same.

Wow, National must have put lots of metal into it. Maybe the large size IF cans?

BTW, I have a Philco answer to the Trans-Oceanic that looks, sounds, and feels like a tube set (especially when you pick it up!) but is all sandy state! Very well built, but I still don't know where all the weight came from.

>Maybe there should be another term to describe early solid state radios >- other than "lousy". Besides, with an added-on xtal filter, the FRG-7 >is a pretty good radio.

"Classic" SS? Personally I make a big cut between radios that use manual analog tuning, and those with pushbutton or switched digital.

Yes, what the FRG-7 and Drake SSR-1 really need is some IF processing -- selectivities, ANL, etc. The front ends are OK, the audio is terrific.

Just to let you know, I shipped a few beam antennas anywhere stateside in 8 inch cement form tubes. I cut heavy cardboard end caps and tape em with duct tape. Its easy, inexpensive, and ups acceptable. Hope this helps a few people. 73s Lew KlNDV

# 1608. M&H Transmitter info?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-12 14:29:41 UTC
From: Marty Reynolds <marty@ba-watch.org>
Message-ID: <oF9a8.94859$Jo3.6423573@bin8.nnrp.aus1.giganews.com>
Source record: 44636
Cross-posted to: rec.radio.amateur.boatanchors,rec.antiques.radio+phono

I've a desktop-rack transmitter that has "M&H Philadelphia" stamped on
one rack panel. Sorta standard for '36-37 in that it had 4 decks
& the following

- 4 6L6 modulators w. big-pin low level audio tubes (6C6, 76).

- dual power supply w. 866s in HV, 5Z3s in LV.

- TX with T-100 final & 2 802s.

- Antenna Tuna

There's a '36 Geo. Grammer QST 2-part art'l that's lots like this.

Anyone out there seen one much less have original lit?

M&H was a Sporting Goods place like Hammacher-Schlemmer or Brookstone that
catalogued specialty stuff for "the discriminating."

Saw a 1931 M&H catalog last night @ local AWA meet. No ham stuff
but there were Hammurlund BC receivers. It inspired this post.

Have inquired about thing 3 or more years ago. No response. But
perhaps time has come for identity!

Thanks for reading this!

Marty

For sale by Bill Skidmore, VE3AUIL GPR-90 receiver is in excellent condition, works well, no mods, scratches or paint chips. Hardly noticeable slight discoloration on tuning dials where, in commercial service, the receiver probably sat on one frequency for several years. One UNUSUAL FEATURE which may be a problem for some, but will make the receiver more desirable for others: The case of this receiver and the escutcheon around the tuning dials are FACTORY PAINTED a light green color instead of the normal TMC blue. This color was probably a special order to match an already-in-place decor. No speaker or SSB adapter. Located in London, Ontario. Asking US $800.

Bill's telephone number is (519) 471-8280 / cell (519) 870-6998. Pictures of this receiver are available. Just send me an e-mail! 73 to all.

Message-ID: <u6ije9if09qf3@corp.supernews.com>
Source record: 44545

Anyone out there have a late HP 410B with the EA-53 AC probe tube diode ? I need you to check your manual and tell me what filament voltage is specified for this tube.

The earlier 2-01C tube as listed in my manual states to adjust filament voltage for the probe tube to 5.0 V. While the HP manual states the probe can either be a 2-01C or EA-53 it doesn't specify different filament voltage settings for the two tubes. I've been told the EA-53 is a 6.3V filament tube.....

I'm researching some Forestry Service information, and would like to obtain a copy of an article in the January 1942 issue of Electronics magazine. Its title is "Mobile 30 - 40 Mc Receiver for the U.S. Forest Service," by Lawson and Belleville, on p. 23.

If someone has this old issue and could make me a copy of the article, I'd be very grateful. Will reimburse copying and postage costs.

Thank you,

Rick WA6NCX

> it in line with the xvtr transmit output. The receive runs on a separate
> line if I remember correctly.
> Jim (n2go)

This IC735 has it all in one phono jack. The transverter that is connected has one cable only for both TX/RX, and it splits the signal into TX / RX lines via relay. Can´t use attenuator for that reason.
Can´t and won´t touch the transverter. Won´t touch the rig inside (not mine), so ALC is the only solution :-)

In any case, tnx fer input, James, es CU on 6m /73 Rick

# 1626. FS: Collins 353A-15 mechanical filter for HRO-60/SP-400

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-12 23:31:45 UTC
From: Charlie <hamcall@prolynx.com>
Message-ID: <3c69a5e2$1@mindmeld.idcomm.com>
Source record: 44554

The 353A Mechanical Filter Plug-In Adapter is a unit about the size of an i-f transformer and contains a Collins Mechanical Filter, two i-f tubes and accompanying circuitry, and an octal plug for inserting the unit into the first i-f amplifier tube socket in the National HRO-60 Receiver or the second i-f amplifier tube socket in the Hammarlund SP-400 receiver. This adapter enables the Collins Mechanical Filter to be installed in either of these receivers with no modification of the receiver. At any time the adapter may be removed and the receiver returned to its original condition.

The filter offered here has a bandwidth of 1.5Kc centered around a 455Kc IF. It is a Collins factory built accessory that was factory modified in August 1960 and is so stamped. Apparently when these types of filters first appeared, they were offered in 800, 1200, 3100 and 6000 bandwidths. The factory must have made up special 1500 cycle units using the standard filter holder frame. Offered here is one of these modified 1.5Kc units. It can be used when copying CW as a wide filter to reduce the hash around the signal, as a RTTY filter or as a super narrow SSB filter.

This filter comes with a copy of the factory manual which includes schematic, installation discussion and operating theory.

Price $130.00 plus $7.50 shipping by Priority Mail

To contact me remove the word "hamcall" in the return address and insert my call.

# 1634. R392 - Servicing the Top Deck...

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-13 01:59:51 UTC
From: John Seboldt <john@seboldt.net>
Message-ID: <3c69c849$0$1599$272ea4a1@news.execpc.com>
Source record: 44562

Have an R392 in fair condition that's working pretty well... but some occasional intermittent cutout of the whole front end that is restorable with some judicious thumps around V204 on the top deck. I've cleaned tube socket contacts and tube pins, switched a few tubes around to be sure it wasn't a bad tube, etc. and it still pops out until I thump around again. Have also had some cutting out of certain bands that usually came back after moving the bandswitch around enough. So I obviously have a bit of work to do, contact cleaning, etc.

So the key question is... what's the smoothest procedure for getting at the circuitry under that top deck? I do have the manuals in pdf format from an online source, and they don't seem to get into the step-by-step disassembly. (Of course, I miss more things while skimming a manual on the computer than I do when physically turning pages of a paper copy...) It's easy enough to figure out how to get the bottom modules out, but the top looks a little trickier.

Advice, please?

John K0JD

I already looked at those fine pix, thanks. Now that I recall the photos (I only DLed the front panel), there were a lot of shield boxes and subchassis in there, plus a very solid front panel. And probably a BA-rated power xfrmer.

Source record: 44576

I'm selling a Johnson Navigator transmitter, complete with copy of the original manual. It's in pretty good condition. Here are the faults: an extra 1/2" hole on the panel to the left of meter, non original meter, cabinet needs repainting, final output coil ceramic form is cracked at base and needs to be epoxied, non original AC cord, a little wear around the operate switch. Otherwise appears to be unmodified. Price $225.

Yaesu FT-101E Transceiver ( plastic still on face ), YC-601 Digital readout, FL-2100F Amp ( plastic still on face ), YO-100 Scope, YS-2000 Watt/Swr Meter, Landliner Phonepatch. All in real good working and cosmetic condition. Price is $1100.00 OBO as a complete station ( I also have an external speaker, a little rough, that I will throw in extra ). Will possibly separate. Please e-mail me with any questions or reasonable offers at- porky@cfl.rr.com

Greetings,

I keep seeing e-bay references to the 2100-B being capable of 1200W SSB. Yet mine has never gotten over 600W. Supposedly it can run 1200W SSS and 600W AM. I never run mine in AM. Furthermore, the amp uses 2 572B's and other amps seems to support the roughly 300W per 572B range. Cetainly not 600W per. Am I doing something dumb here ?

My system is an older Yaesu FT-980, recently serviced by Vertex, doing a solid 100W easy and reliably. Old, but runs like a champ. This is fed into the Yaesu FL-2100B. Yaesu did make special connectors but I never see these. I just use a jumper wire on the back and flip the operate swirch on/off as needed. Mostly I operate on 80M, LSB. The tuner and ant. I use are right for the load. I have a MFJ-259B that shows 1.1 : 1 SWR pretty consisitenly. The tubes are Centron 572B's age uncertain but look good. Not sure how much of the info in this para you really need to help but trying to give what I've got. Am I missing something here? Help or comments would be very appreciated. Do have manual copy, have read it, and have played with Plate and Loading knobs for best result which is never more than 600W on a * loud * whistle into the mike. Ideas ??

Thx. es 73 de KG4JBM/ Andrew

There are, they're just not very common. Old tube radios used "A" cells for the filaments, "B" cells for the plates. They're still made, and you can still order them from Radio Shack and others, but hardly anyone keeps them in retail stock.

> My kids have asked, and I can't answer, Why are
>there no "B" batteries, or "A" batteries ??

Well technically, there still are, but you don't see them as often. In the days of battery operated tube radios, (beginning in the 20's) these designations were used. The "A" battery was for filaments, the "B" battery for plates, and sometimes there was a "C" battery for bias. This tradition carried through to the miniature tube portables of the 50's and 60's. (Though they rarely had a C battery.) Sometimes the A battery was a misnomer, as it was more often a CELL. (You need more than one "cell" to make a "battery.") The high voltage B batteries are still available, but they are very expensive. Most people use some kind of alternate, such as a bunch of 9 volt batteries wired together, or an inverter.

These A and B designations have nothing to do with the present day cell SIZE designations such as AA, C and D.

Present day transistor radios still use a battery, but since there is only one, and it doesn't fit the traditional description of either an A or a B battery, it is just called a battery.

Hope this wasn't too confusing.

> there no "B" batteries, or "A" batteries ??
>
> Just Curious,

I'm pretty sure what you are asking is why there are no A or B *cell* batteries--

A and B "batteries" were multi-cell sources for the early battery radios - where the A battery supplied the filament; and the B battery supplied the B+ - or plate voltage. The A batteries ran anywhere from 2 to 6 volts; (5V being the most common filament voltage; you used a rheostat to adjust as the battery ran down); 67 and 90 volts were most common B batteries. These used a bunch of cells - series to stack up to the B+ voltage; the A batteries were usually series (to give enough voltage) & parallel to give enough current. There were also C batteries - (not to be confused with C cells) - they usually supplied some bias (negative) voltage for output stages, etc.

Back to the "Cells" There are - or were, A and B cells, (like AA, C & D cells today) but they aren't commonly used anymore - but they did (some do) exist.

Here are Cell Types and their specs (Being "cells" they are all 1.5V carbon):

Type Size (Diam x Height) Wt. (lb.)
A 5/8 x 1 7/8 .046
AA 17/32 x 1 7/8 .033
B 3/4 x 2 1/8 .077
C 15/16 x 1 13/16 .1
D 1 1/4 x 2 1/4 .22
E 1 1/4 x 2 7/8 .29
F 1 1/4 x 3 7/16 .35 (commonly used in packs to make A batteries)
G 1 1/4 x 4 .4
6 2 1/2 x 6 2.2 is also still around, used both in industry and by hobbyist (glow plugs in model airplanes and cars gas engines). These are those tall cells with two binding posts on top - one in the center - and one at the edge.

There were also BR, CD, FL, FL-1 -> FL-9, J, K, M, N (still are), NS, & P cells.

best regards...

QMX crystals will make these things for you. You gotta need to know the
frequency and the loading and that's about it. They are very good about this
sort of thing and dirt cheap. Cheaper than junk box hamfest crystals.

I have for sale a brand new Drake L4B amplifier that has never been used. No power plug has ever been placed on the power cable. It was purchased, stored, and forgotten until the owner's estate was liquidated by his son. His son gave the amp to a friend of mine and I bought it form him. In this process, the box containing the tubes, plate caps, chimneys, and parasitic suppressors was lost. The amp was shipped from Drake in 3 boxes: one for the deck, one for the power supply, and one for the tubes and accessories. The box for the deck fall apart when opened, but the box for the power supply is in good shape and is included. Paper ID tags are still on the deck. I purchased all original, excellent condition, Drake chimneys, plate caps, parasitic suppressors, and an as new set of Eimac 3-500Z with full output. They were backups and only used to test their condition. So the amp is now complete. It also comes with the original manual. I have decided to sell the package. Price is $1,075 plus shipping from 79602. Digital pictures are available upon request from interested persons. Thanks, Charlie Hugg, K5MBX

Hiya, Jack!
In my early 30s I brought home a Model 33 Teletype and carreid it down into the basement by myself. Back then I was a total nerd, never got any exercise or sports.

In my 50s we were moving and I had to carry that Teletype out of there. I had been going to the YMCA gym 3 times a week and was in great shape. But I still could not pick that thing up by myself! Had to get my son on one end of it.

Amazing how much extra metal a BA can grow in just 20-odd years! Now I need carts to move my SP-600 and R390 around, and am getting more and more interested in classic transistor radios, hi! --Mike K. AA1UK

Maybe, but I have an old breadboard & panel superhet (8x 201As) whose bias cell holder takes on C cell, so I guess it's a "C" battery in both senses.

Only kicker is, this superhet seems to have been built recently (like last 30 years) from oldparts, so using "C" flashlight cells for bias may not have been common practice in the 1920s. But the Bakelite C holder is certainly a very old design.

So everything's OK ? Thx. to both respondents. The guy that sold it to me
did say 600W, so I don't feel ripped-off. But I do feel sorry for those newer
hams like myself who think they're buying a kW+ and find out different when
they hook it up to the wattmeter. Caveat Emptor, I suppose.
Thanks for the fast reply.

Hello to the whole group I Look for to buy to sell or to change
I look for a GS35b it is Russian

an Eimac 3cx1500A7/8877 with baseboard

two Eimac 3cpx800A7 with baseboards

an Eimac 8874

I look for any of course of those combinations in that priority
for it to contact me to see if we reach an agreement
by means of ea5ax@ono.com and I will call you this telling it to me

I have 2 valves of Eimac model 2c39A 77-30 33173
jan 7289 I have an and he/she gives 125w in 1200mhz and if
it is refrigerated by water it takes out a 250w in
1200mhz and 432
something but These I blindfold them or I change for some those of up

If you have valves 3.500Z of Eimac it would be also
interested

**********
Hola a todo el grupo Busco para comprar vender o cambiar

As I noted in my previous post - just don't confuse A, B & C *cells*
with A, B & C batteries.

A, B & C (AA, AAA, and the rest of the letter) *cells* are just that =
a single _cell_ of a specific size, and produce 1 1/2 volt. (assuming
carbon zinc chemistry - other (modern) chemistry will be different).

A, B & C *batteries* are made up of cells, the type and number of cells
depending on the task to be done.

The 9V Transistor battery is just that - a battery of cells - 6 cells -
1.5V ea in series.

As noted in my previous post - "A batteries" were often made up from
several "F" cells... As Mike noted - there were times when a "C" cell
also served as the C "battery" - though really in this case the term
"battery" was used in error.

Even your car battery is made up of cells. Being lead/acid chemistry -
it's voltage is more like 2volts per cell - and with 6 cells - 12volts.

If you want to get *really* confused - just start trying to deal with
all of the modern chemistries in use... Lead Acid has been around
forever, ZincCholride has replaced ZincCarbon; Alkalines I'm sure you've
used; then there's LiIon (Lithium Ion); NiCd (NickelCadnium), NiMH
(Nickel MetalHydride), and so on. There are even batteries that use
some pretty exotic chemistries - like air... even mercury (though now
illegal in most places).

best regards...

Chalk-up another acceptance for eQSL's......

---
Confirmation was received today from the president-elect of the
3905 Century Club that their awards program will accept hard copies
of eQSL's as confirmation. The hard copy can be printed by the
recipient on his home computer if desired, or you can use eQSL's service
to have them printed and mailed to you.

Either is OK for Century Club awards.

Hi folks. I've got a D104 that's not perfect looking by any stretch,
but it seems to work fine. It's missing the sliding PTT lock ring ,
has a couple of holes in the base, and the base has been repainted
badly. No connector on the wire. The head actually looks decent, no
visible damage.

You get the picture.

The good news is that it's yours for $15, you ship.

I have for sale a nice old Knight TR-106 with the matching V-107 VFO unit and cables. This is a 6m AM rig with built-in speaker. Silver and blue with a great styled case.

Front panel looks really good. Has all original knobs. It is NOT in mint condition, but shows less than normal wear. No bad dents or dings.

The power cable to the TR-106 is missing but you can easily make one. I have not tested it but it is all there. No modifications or damage has occurred.
Will sell for $135.00 plus shipping

I have three Hallicrafter's radios for sale or trade. The first is an S085. In good physical shape except the previous owner painted the cabinet top black! The radio works very well and is original. It comes with a manual copy. I think it should be worth $100.00.

The second is another Hallicrafter's receiver, an SX117. A very nice receiver, and works very well on the lower bands. The slug has come out of the HF Oscillator for the higher bands. I do have the original slug but because of health reasons I am unable to reinsert it and retune the radio. I have used it on the lower bands and think it is very sensitive! I think it should sell for about $280.00. It comes with the manual.

The last item is a Hallicrafter's SR150.; Again a very nice unit. The receiver is as hot as you could want. The transmitter is untested but it should play like the receiver! I want $350.00 for the transceiver including the matching power supply. The power supply has one of the plastic feet broken off but I have it for reference. It comes with the manual.

As usual, you pay the packing and shipping on what you buy and I'll pay the packing and shipping on the trades!

Now what I would like in trade. Kenwood TS700SP, and TS600. Other trades for items of interest will be evaluated!

Thanks and 73

I have a very fine Hammarlund HQ170A that I would like to sell or trade. It is a very fine receiver, it works on every band and mode. Externally it is very fine, the only problem I can find is the previous owner enlarged four small holes in the cabinet to mount a speaker!

I want $350.00 for the receiver. I am interested in a trade for an HQ-215 in similar working condition.

The radio comes with a copy of the original manual.

You pay the shipping your way and I'll pay the shipping my way!

BAMA does have the schematic and I don't have any problems downloading
from them. However,

There is a schematic and front page for a HO-10 at:

http://www.circuitarchive.co.uk/heath.htm

You can also get a copy of the manual for $20 from:

W7FG Vintage Manuals at http://www.w7fg.com

I have a HO-10 at home, with manual. If you still need more info or
a few pages copied, after Monday, let me know and I dig out my manual.

Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

Hello interested Hams...

I have had some interesting, courteous, and informative emails with the ARRL president Jim Haynie, W5JBP concerning the recent flap about eQSL acceptance for DXCC.

Jim was also nice enough to forward to me in-house ARRL email from Bill Moore to Jim which goes a long way to further explain the likelihood of eqSL cards being accepted for DXCC as eQSL web site now states. Jim has asked me not to include the actual verbatim email from Bill..but has encouraged me to post "just the facts as Bill has laid them out" (Jim's words to me) .... and so to the best of my abilities I'll do that now....if you want to skip ahead I can tell you it still looks like eQSL cards can be and will be accepted by the ARRL as long as some important steps are taken....

Here are cut and paste excerpts from Bill's email to Jim....
---
1. It seems people have not read the entire message, especially the part that says "acting as QSL manager". On his site I see where he has OK for sending e-QSLs, not paper QSLs.In order for us to accept anything from him we would need a letter from each station he "manages" authorizing this

2. Then, we'd need something better than his word that he is verifying logs each time a request comes in (something we do not think he will be willing to do with all the stations he has logs for).

3. The requesting station must send information listing the specific QSL information then the manager must check the log for it. I believe the term for not doing this is pre-emptive QSLing.

4. As I have mentioned to all who have written, that ARRL has not changed its policy in any way regarding electronic QSLs.

---
end of cut and paste.....

You've got an incredible memory to recall that I had a Leary! Bet his blackface looks a lot better, or at least less startling, than my pink one did.

73, Avery W3AVE

>>

memory is near photographic. Re: pink, mauve, red, blue and magenta Leary's.....LOL!!!!! One thing is certain, they were colorful. I've had three of 'em. This black faced one is quite tame by comparison, hammertone gray chassis, power supply and filter chokes black, the four if cans are red and the front panel is black wrinkle very nicely done I might add.

# 1714. FA Drake TR 33C

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-15 01:37:49 UTC
From: Lou <tech@dp.net>
Message-ID: <a4hp97$25ae$1@news.dp.net>
Source record: 44444

I have a Drake TR 33C - portable/mobile(?) 2 meter rig. The unit is in reasonably good "physical" (8 - 9.5 out of 10) shape. I'm not sure what all may have come with it new in it's hey day, but I have at least the radio, microphone and an AC cord. I "may" have a "owners" manual or a copy of it here somewhere also.

I am not sure what this thing is worth, nor do I know if it will work "properly". When I tried it, it seemed to me like it needed some crystals installed to get it on the air. It doesn't look "beat up" so I can't imagine more being wrong with it. But I did notice a few empty slots where xtals could/should have been. The only thing I did see that needed attention and I corrected, was the AC Cord input was cracked. I superglued it. It appears ok now. I've described it to the best of my knowledge as to looks and operations.

I do NOT wish to use E-Bay/Yahoo or any other for an auction site. However my past E-Bay rating (NO negatives or neutrals) shows my honesty. Inquire in the various radio newsgroups if you want, as I've sold to many over them as well.
I have many items to clear out. Time is of the essence to me. I'm a "cash and carry" person. I don't like extended waits.

There is NO reserve. Unit is AS IS. IF you have an interest, e-mail me with your bid and zip code. The highest one I receive by Midnight Wednesday 02/20 will win it. Shipping is extra. Payment via Postal MO ONLY. IF you are the lucky bidder I will e-mail you and let you know your total with shipping. I will then pack it awaiting the Postal MO. I can supply pictures of the radio should you desire to see them prior to bidding.

Should the winning bidder fail to follow through, the next highest bidder will be e-mailed.

Should the moderator(s) of this newsgroup or others (readers) have a problem with my doing this, I would welcome your "polite" suggestions. Flames won't be necessary. I'm only trying to make a buck and provide a service.

Thanks for reading.....

Imagine if you didn't have to work for a living, or live a real life while retired.
You could take digital photos of all the junk components in your basement,
and post them on an auction service.
I suppose that some people think that it might be fun if others respond with bids,
regardless of the cost and quality. I could have a field day with auctioning my collection
of
late 50's to early 60's Bell Labs/ WECo transistors :-)

# 1721. FS: 2 KVA HV Power Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-15 05:59:43 UTC
From: Bill Abate <wabate@dandy.net>
Message-ID: <bp8p6u0s8tnb8qabt1inbi024sn17dnli2@4ax.com>
Source record: 44449

For Sale:
2KVA power transformer with 6200 VCT secondary. The primary is tapped at 105, 110, 115 and 125 VAC so this would be ideal for those without 220 in the shack as it can compensate for voltage drop in your wiring. This is an oldie but goodie. I have used it for years without any problems. I'm selling it because I need higher voltage. The only drawback with this transformer is that it is very heavy (the price you pay for CCS duty). I would estimate it at about 80 pounds. I will not ship. If you can get to the western Philadelphia suburbs you can see it in operation and I will help you get it in your car. $75 and a great price for a continuous duty transformer. Should give you about 3000 volts under load.

Email me with questions.

73,

Bill, K3PGB

# 1731. Re: HELP:HAMMOND Xformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-15 14:02:30 UTC
From: Robert McLean <robert.mclean1@sympatico.ca>
Message-ID: <Mt8b8.30563$Hv5.3465327@news20.bellglobal.com>
Source record: 44459

Bruce :
per my Hammond catalog :

272 FX is a plate & filament power transformer, 300-0-300 V secondary, 146VA, with a 5.0 V 3A ct filament secti0n, and a 6.3 V 5A ct filament section.

724 X 60 : dont know about the X 60 (perhaps 60Hz as opposed to 50 Hz ??) but a 724 is a 750-0-750 Volt plate transformer, rated for 625Vdc at 200mA when rectified.

10-300X : dont know

2100 : dont know

167E : dont know about the E, but the 167 series are filament transformers of various voltages.

Hammond has a web site http://www.hammondmfg.com/ where you can find these and also request their catalog.

Robert.

# 1732. Complete HF Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-15 14:50:38 UTC
From: KU4YP <ku4yp@earthlink.net>
Message-ID: <2f9b8.10885$P21.1040350@newsread1.prod.itd.earthlink.net>
Source record: 44460
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

hello,

a couple of bites on the last time so i am listing this again.

complete swan 500 station includes:

1) swan 500 (not c or cx) transceiver. 80-10 meters. over 200 watts out on 80 about 80 watts on 10. average is about 120 to 140 watts. very clean. had rubs on the front corner of top cage. all letters and face plate in excellent condition. again, i will not call it "mint" because it is not brand new. all listed equipment is in very good condition.

2) swan 410 external vfo. looks/works great
3) swan model 22b vfo adapter
4) swan model vx-2 vox unit. for break in cw. needs a wiring change inside. simple from what i understand. i never worked cw with this rig so i don't know.
5) sure 444 desk mike with swan logo
6) swan 117xc power supply. two mods: one is a muffing fan wired to jones plug so it comes on with the rig. the fan has "feet" that sit on top of finals to keep everything cool. also, wired for use with dsp unit. this can be removed and no holes have been drilled or anything.
7) swan model wm-3000 2000 watt powered meter. very nice condition
8) model fs-2 field strength meter. even has the original antenna on top, which is rare these days.

this equipment is in service and operational. naturally, due to the age it is offered as is. an on the air trial can be aranged with an interested buyer, conditions permitting. i have pictures available for you to judge for yourself.

i have a deal for a heath hw-9 and need to sell this equipment. price has dropped from $325.00 to $300.00 and i can maybe even help a little on the shipping.

email me and we will work something out.

If you're talking about the commercial point-contact transistors,
then you are talking about seriously uncommon stuff.

If you're talking 1960-vintage 2N404 and the like, then only the
idiots will bid on them, which means you can expect to make a
bunch of money.

FOR SALE:

Blitz Bug lightning protector for PL-259 to
PL-259 coaxial lines. New in box. Will sell for $7.00

National NC-190 Receiver
This is nifty old receiver with that classic
space age blue finish.
Front panel looks very nice, but some of the
knobs look crusty and need cleaning.
Appears to be all original with no modifications.
Receiver lights up but is not working properly.
However, it is all there, and will clean up
nicely.
Will sell for $125.00 plus shipping

Realistic DX-160 Receiver with Realistic speaker
Excellent condition general coverage shortwave
receiver set.
Will sell for $75.00 plus shipping.

Heathkit Audio Generator model AG-9A
Unit is in excellent condition and comes with the
original manual.
Heath gray finish with immaculate front panel,
all original knobs etc.
Good working condition. Picture available via e-
mail on request.
Will sell for $35.00 plus shipping

813 Transmitting Tubes by JAN / KEN-RAD
Both appear to be new - one is in the original
box, one is not.
Will sell the pair for $40.00
or for $25.00 each plus shipping.

For sale:

I still have a variety of cool ARC-5 Command Set receivers and
transmitters etc. available at sensible prices.

BC-459A Transmitter covers 7.0 - 9.1 Mc. Black
case. Dial is missing
Rotary coil etc. are in good shape. One small
cover is missing -
Bottom cover and case are both present and in
good condition.
Otherwise looks to be complete and in very good
condition.
Will sell for $30.00

BC-457A Transmitter by Western Electric. Covers
4.0 - 5.3 MC.
Silver case. Small cover missing from above RF
finals.
Otherwise looks to be in very good condition.
Unmodified. Will sell for $30.00

BC-465B Receiver Western Electric - covers 6.0 to
9.1 MC. Silver case - comes complete
with all covers. Missing 5 octal tubes. Otherwise
looks to be in very good condition.
Unmodified. Will sell for $25.00

BC-733F Receiver with dynamotor DM-53A for 28 V
DC operation.
Black case, complete and in good shape. Has
service and inspection tag from 1959.
Comes with the connector and the original
shockmounts.
Looks to be in very good condition.
Unmodified. Will sell for $30.00

R-268/ARN-5B Receiver - Black case, similar to BC-
733F, but marked for 24V DC
and no dynamotor. It's all there including the
shock mounts and special
bayonet connectors. Looks to be in very good
condition.
Unmodified. Will sell for $30.00

Shipping additional

I have for sale a nice old Knight TR-106 with the matching V-107 VFO unit and cables. This is a 6m AM rig with built-in speaker. Silver and blue with a great styled case.

Front panel looks really good. Has all original knobs. It is NOT in mint condition, but shows less than normal wear. No bad dents or dings.

The power cable to the TR-106 is missing but you can easily make one. I have not tested it but it is all there. No modifications or damage has occurred.
Will sell for $135.00 plus shipping

At the bama site, if you're using I.E., when you get to the model you want, instead of left clicking on it, use your right click and choose "open in new window". Then you can "select all" followed by "copy to folder" and choose a folder/directory on your own computer -works great!

The Ameritron AL-572 uses *four* 572Bs for a rated 1300 watts ssb *output*. So
if you're getting about 600 out on two tubes, that sounds right. Otherwise,
you'd have to question how Yaesu could get 600 watts out, per tube.

# 1756. FS: SWAN Desk Microphone (Shure 444 Type)

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-16 05:11:38 UTC
From: Larry Johnson <larryj@teleport.com>
Message-ID: <3C6DE380.EEB7561B@teleport.com>
Source record: 44484
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

FS: Shure Desk Microphone model CM17L- It's a Shure "Controlled Magnetic Microphone" that looks like a regular Shure 444 mic, with the usual locking PTT bar, telescoping section for the mic, a SWAN logo base plate in place of the usual Shure plate and a cord with a 4-pin connector. It has a slide switch underneath in the base to select between NORMAL and VOX. $45 plus shipping.

Thanks to everyone who either replied to my request via the news group
or directly to my email address. Quite a lot of interesting fact and
comment. As I mentioned in my first post, I intend to create a web
site for the receiver and will include downloads section for the
manual and data sheets that have been passed to me.

I would be very interested in any pictures that people have of the R1475 actually in use in a service with the British RAF or the Canadian Air Force.

Any anecdotes also gratefully received.

Many thanks

Steve

# 1760. FS: 4-1000A Filament Transformer

In that case, you have some articles which some museums of
science and technology might have _very_ serious interest in.
Please take care of them, investigate what museums might want
them, and make arrangements for disposition in your will.

No, I'm not kidding. I don't really know what their value may be,
but they're the foundation of the current technology, and they
can't be very common nowadays. They will become progressively
less common as time passes, and their historical significance
will never decrease.

Time and again I've kicked myself for ditching something because
it had become outmoded, only to find later that it had become
significant and/or valuable.

That's why I saved all my slide rules. (And they never run out of
batteries.)

Source record: 44400
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.shortwave

Back by popular demand! This Wednesday February 20th the CCA will be sponsoring a low power AM night on 3880kcs.

We will be looking for 100 watts or less. Things like DX-60's, Knight T60's, Gonset G77, Harvey Wells T-50s' Multi-Elmac's etc.

REMEMBER you DO NOT have to be running Collins gear to check in. Everything is welcome!

Each ncs will start at 08:00pm in their time zone.

We will have 4 main ncs. One on the East coast, Midwest, Mountain area, and West coast. The main ncs will have others in their area helping with their hour. (Please note ONE HOUR). At the end of their hour the main ncs for that region will contact the next regions ncs and turn ncs over to them etc.
etc. etc.

Starting at 8:00pm EST (01:00 UTC) Bill K2LNU ncs will start the net
At 02:00 UTC East coast ncs will turn ncs to Midwest ncs
At 03:00 UTC Midwest ncs will turn ncs to Mountain ncs
At 04:00 UTC Mountain ncs will turn ncs to West coast ncs

comments please to wa9vrh@ocslink.com

Visit our website at www.collinsradio.org for more information on AM activities.

Have fun and enjoy the great sounding AM signals. 73's Larry WA9VRH

Gonset transmitter for sale. Looks like it could be 7-8 and works well. There is a piece of the bakelite broken off the left side of the meter, but it works as it should, with no problems. The power supply has been completely restored, including the filters, power divider, and 5U4 rectifiers being replaced. Tested on 75 and 40 meters. Shipping will be around $40.00 or so, in the US. Asking $250.00 plus shipping. See picture at my web site:

http://members.tripod.com/~sjsharks/index.html

Go to the last page.

Thanks for reading

I have for sale a nice condition Yaesu FT-101ZD. This particular
transceiver is the version with AM mode included.
The cooling fan option is also installed in this rig.
Cosmetically it is in nice shape with one small hairline scratch
next to the clarifier control. Electrically it is in fully
functioning condition with full output 80-10.
$350.00 plus shipping and insurance from zip code 76001

Thanks!

# 1782. FT: Vintage Lettine 240 tube transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-17 02:45:22 UTC
From: David Austerman <daveaust@juno.com>
Message-ID: <63f167f7f4aaaaea8f2cb2abf84d9364.70644@mygate.mailgate.org>
Source record: 44410

I have a nice older hard to find Lettine 240 AM/CW transmitter for
trade. Looking to swap for tube communication receiver-either general
coverage or ham bands- interested in all makes -- just want it to be
vintage/all-tube and in fairly decent condition(don't really have time
to do a full-blown restoration). Especially interested in rx's with
S-meter.
I briefly tuned up the xmitter into a dummy load a year ago and it
powered up and looked like it was operational. Has a pair of 40 meter
coils only(needs two plug-in coils per band.) No manual. 807 power
tube-nice old Amperex in there now. Pair P-P 6L6 audio tubes. Xtal
socket onfront panel. In nice shape- has a few tape marks on the front
of the face. Havent tried to remove residue.
A really sweet little transmitter, I just don't get on the air enough to
need it so thought I'd see what I could swap it for. Let me know what
you might have and condition, if I would owe you money difference, etc.
Below links are photos of the unit a pic of one of the two coils (note:
my pics are on stored free on auctionwatch.com, but xmitter is not up
for auction.)

Source record: 44429

I have a couple of them, and the matching AX190 ham band only receiver.
Very nice for AM as it has very good frequency readout.
Its' weaknesses are..
Poor opposite sideband rejection
Poor selectivity (useless for CW)
It has good sensitivity, and the overload characteristics and AGC are on par
with other low cost receivers.
I used mine on the air for years with a Ranger 1 as a novice.
There is also a service manual for them, and a matching speaker.

Source record: 44434

Yep Front end overload fer sure! Back-off the pre-selector or use a smaller antenna (1 or 2 feet long) for those megawatt SW BC stations. Or do the mod.

Seen prices about $125 to $150 for the RADIO SHACK version. $150 to $225 for the rarer "ALLIED" Radio Shack version depending on condition. Matching speaker is about $20 to $45.

As a receiver - I rate it average- not bad for a first timer. Don't like that fact it does not have AM broadcast. Audio is OK with a decent speaker. S meter is a joke and AGC action with very weak.

In short, this ain't no Collins but it's better than most of RS's short wave receiver offerings during that time period (Early 70's).

Unplug the antenna. If you hear a slight hum on the audio - it's time to replace that filter cap on the power supply board. I've seen that problem with all the SX-190's I got to play with over the years.

Don't let the above scare you - It a pretty receiver to look at. Ask the XYL to let you put it in the kitchen so you can hear the BBC with first cup of coffee in the morning. Tell her it's a real expensive stereo!

What's curious is the impression where the control is mounted. The one
I've seen a picture of shows a very clean and tidy job of making the
impression. I'm not familiar with working sheet metal and wouldn't know
how to do it; maybe it's easy, though.

# 1809. Re: Applying ext. ALC to IC-735, pse help?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-17 16:34:29 UTC
From: Gary Schafer <gschafer@mediaone.net>
Message-ID: <3C6FDAD6.DFD366B@mediaone.net>
Source record: 44437

How much power does the transverter require? 30 mV is not very much and sounds like a common value. The easiest way to check the ALC values needed is with a 9 volt battery and a 10 to 50 k pot to vary the voltage. Don't know exactly how the 735 does it but most transceivers control the IF stage with the ALC. The transverter output is usually the output of the driver stage that drives the final amp or one
stage before that. So the ALC should affect the transverter output.

There's at least two knob styles I'm aware of. The older ones have a plated brass ring insert and the others have a bright stainless steel cone insert. Also, the SX-62 knobs use two setscrews rather than the one used on the S-38/S-40 types. I think I have one of each around. Probably makes a difference with the bandswitch. E-mail me if you need a match.

I doubt it. The factory hole in the panel is there only to clear the stud on the back on the "h" logo, as far as I could see. Adding a bandspread might be quite easy with some varactor diodes, a few caps and resistors and a pot. Something I've thought about, but I'll probably leave mine alone.

# 1816. Name This Aluminum Cabinet for R-390A???

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-17 19:01:52 UTC
From: courir26@yahoo.com
Message-ID: <a0dd5fc9.0202171101.39395807@posting.google.com>
Source record: 44344

Group,

Please look at this pic

http://www.geocities.com/courir26/Ed390A.jpg

and the cabinet that came with this R-390A.

This is an aluminum cabinet that seems to be made for this radio. It has the little nipples in the back to mate with the frame holes on the R-390A. It has pads for a desktop, but no shock mounts like the CY-979A.

The only clue I've found is on certain hardware pieces the name "BUD" appears. There is no nameplate.

This cabinet came out of the EAC factory with this radio, so I think it is made for the 390A, but I don't know the nomenclature.

Does anyone know the nomenclature for this aluminum cabinet?

73 Tom

BUD was a respected maker of cabinets, chassis, and racks for years

Don't know if they are still around

They were in a position to tool up and make custom cabinets for major manufacturers

hope this helps

g

My Sx62 has a bandspread: i think it's an add-on by its first owner, a very fine job with a multisection variable cap, set in the free space beside tuning cap, a moving needle dial (parallel to main tuning dial) and a knob (coaxial to tuning knob) to operate it...
Well, life is MUCH easier with it, tuning SSB becomes smooth and easy :-)

Regards.

Hello,

I have several of this antique globe shape German triode in stock. It
is directly heated, an European 4-pin base and about 12W anode
dissipation. The valves are NOS, but the boxes are mostly in bad
shape. Pictures are available by e-mail.
Please contact me if you are interested.

Regards,

Arnold Goksyr

DEMOSTENES - N6899 Balestrand, Norway
Tlf. +47 5769 1340 Fax +47 5769 1267
http://www.demostenes.no

Thousands of different valves in stock as well as
sockets,transformers,books,caps,resistors and
other components. Web site is updated every week.
You can order on-line.

4 SALE lots of Kenwood STUFF...........

Kenwood R-599D Receiver works, and looks Great with manual $150.00

Kenwood T-599D Transmitter was tuning OK, and then stopped . Nice
conditionwith manual $100.00

Kenwood TWINS connecting cable for a R-599, & T-599 $30.00

Kenwood S-599 matching external speaker for the Kenwood R-599
Receiver, nice condition $50.00

Kenwood MC-50 desk microphone with manual $50.00

Kenwood YK-88CN 270HZ C.W. filter on 8830.7 KHZ.
This filter will fits these models:
Kenwood TS-130S,130SE,430S,440S,530S,530SP,830S,670S,660,and
the R-5000. $65.00 shipped in the U.S.

Kenwood YK-88C 500HZ CW filter on 8830.7 KHZ.
This filter will fits the following models:
TS-120S,130S,130SE,430S,440S,530S,530SP,670S,180S,830S,660,
& R-5000 $65.00 shipped in the US.

Kenwood TU-4C (new in the box) is the Tone Encoder for the Kenwood
TW-4000A 144/440 MHZ dual band mobile radio $50.00 shipped in the
U.S.

KENWOOD CK-18 WARC BAND COIL PARTS KIT FOR THE TS-180S (New In
The Box),(UNUSED) This will add 12, 17, 30 meters to your Kenwood
TS-180S, instruction manual included.....$65.00 shipped in the U.S.
ONLY

Kenwood IC-10 (set of two chips) these are required for computer
control when using a Kenwood TS-440S, and R-5000
$49.00 shipped in the U.S.

The RF input is an RCA plug. The relay keying and ALC are also RCA jacks.

The only connections required to run it are the RF in, Keying and RF out.

The keying line will be connected to a normally open set of contacts of a relay used to key the amp. This line will have a -100 volt potential on it so do not key it with a newer solid state circuit directly.

The ALC is a feedback signal to the exciter and usually is not needed if the exciter does not exceed the grid current maximum of 3 mA on the 572B tubes in the amp.

You should get a manual or copy of it and become familiar with the equipment before attempting to use it.

I can provide a copy if you need it.

73 and good luck...

A very clever reciever, especially the calibration.
Never had it, but saw the reciever in Dutch dumpshops in the seventies.

I have (somwhere) a description (In Dutch) and schematics.

I am looking forward to Your Website

Martijn R.

I'm impressed! SSB reception got me thinking about a varactor bandspread mod.
I don't listen to SSB much, and I generally prefer to leave radios unmodified,
so I didn't do it. But your modified radio sounds much better than the usual
amateur hack job. In fact, I reversed a couple of ugly hacks on my radio.
Still have a couple of holes to plug on the back of the chassis.

In a recent QST, an article described to make a slide rule dial appear on your PC/receiver. Of course, they had to have a picture of a slide rule there, so the younger folks would understand what they were talking about.

The website for the Siltronix only makes mention of the conversion and makes a vague reference to an out of print ARRL book from the 80's of a collection of Hint's & Kinks.

If anyone has the info on how to do this conversion it would be greatly appreciated, since 10 is hot now, I would like to put this old rig on the air. Before 10 goes dead for the next 11 years.

Thanks
Ray

Use a 6KD6 and change the plate cap, rebias, re-neutralize.
Check the pinout first I believe its the same.
You will have to go easy on it since the 6KD6 rating is less than an 8950.

>Also need a meter
Ray, I wouldn't invest to much $$ in that set, they are junk and drift worse
than HW-101's
I doubt you will be keeping it if you get it working

Hi All!

Have a nice Hallicrafters SR-150 with spkr/ps for sale. Output a little
low but otherwise very good. No mods. With manual copy.
$275 shipped CONUS

Heath SB-101 works fine and looks pretty good. front panel very good.
cabinet has the usual paint scrapes. NO ps/spkr. NO manual.
$150 shipped CONUS

will trade +/- $$ for....SB-301,401,610,620,630,640,650
pics available on request

Hi Johnyk78

I'm looking for something to power a beat
up BC 348 which has no dyno,
probably choke input is easiest,

somewhere around:

6.3 at 2.5 A
5 at 2 A (or another 6.3 winding)
560 CT at 35 ma.
fit space that is 3 3/4 wide

also looking for a 4 HY choke at 70 ma.

I'm looking for a Zenith TransOceanic Royal 1000 receiver, any version.
I want one in excellent or better condition: complete, no corrosion,
little or no blistering, good working order. I strongly prefer the
genuine leather version, but will consider vinyl. I'll pay top dollar
for the right radio. Please email if you have one to sell. Thanks.

From: iron3@charter.net
Message-ID: <u75tt63sl1n251@corp.supernews.com>
Source record: 44322

Hi. I just acquired a Knightkit T-150 transmitter. I see oscillation on other bands and interference with rados in the shack For example if the T-150 is tuned to 80 meters, 40 meters interference on other radios is heard.. Also the AM is way down (100 watts average for CW/5-15 watts for AM) I understand from other persons that this is common to this transmitter. I have replaced the tubes, power resistors and caps. Has'nt made anydifference except increase in power from the original state I got it. Still interference. Is there a fix for this? Any suggestions appreciated

IIRC this xmtr uses a basic 3.5 Mhz VFO that doubles up to 40 meters.
Is the harmonic of the VFO what you might be hearing? Sri, can't help
on the AM.

Well you might think this is very funny but RadioShack has 6146's
available for 39.99 a piece brandy new in the box. Special order RSU
10058717
The 807 I don't know the price right off hand but the RSU 10064947 is
what you need for the 807's I hope that helps.

Hi Bill.. I can also hear it on 20 meters though not as strong. Frankly, I have not considered putting it on the air because of it. The signal comes over all my station transceivers and receivers even in a dummy load. My concern is that on the air will do the same. Ground is short and transmitter to dummy load (coax) is about 3'. Has what sounds like a great tone on CW but I want it on one band at a time (hi-hi..). I tested my other rigs Kenwood 830s, 520S, Icom 740 and HT-37. None of the other rigs display this problem. Clean. As I said earliar, CW is about 100 watts on 80/40/20 and about 70 watts on 10. AM however range about 15-5 watts respectivly. At the design rated 150 watts and duel 6146's, the transmitter if functioning correctly would (should) be a good performer. However, I have received two e-mails of operators that had the same problem with the T-150 and am beginning to wonder if it is simply a flaw in the original design. I have not found anyone that knows of a fix for the oscillation. I have even went through the rig and checked to insure that leads to resistors, caps etc are no longer than need be, no exposed wiring and checked and resoldered connections. I am open to suggestions. Thanks for your response. Jim

Your missing the point. If the xmtr uses a 3.5 Mhz VFO and multiplier
(which I think it does) you'll hear the VFO harmonics at 7.0, 10.5, 14.0
etc. None of the ones you mention function that way...they are all
'heterodyne' transmitters. It doesn't necessarily mean it will go out
on the air IF (and thats a major IF) the rig is properly tuned.
This is the same case as with the old xtal novice xmtrs. It's sometimes
a bit too easy to tune up on the wrong harmonic if the antenna isn't
well resonant or the op is a bit unfamiliar mwith tuning the rig. I
received a couple OO reports in my Novice days because of that.

Clean. As I said earliar, CW is about 100 watts on 80/40/20 and
> about 70 watts on 10. AM however range about 15-5 watts respectivly. At the

Its controlled-carrier AM so you do have to give it some audio...you
won't get just a solid key down reading like a normal AM rig. That
being said, I imagine the problem could be anywhere along the audio
modulation circuit starting at the mike. If you haven't done so
already, it might be worth re-capping or at least doing some intensive
cap checking...its of that age.

> I have
> not found anyone that knows of a fix for the oscillation.

Trust me. It sounds normal.

-Bill WX4A

# 1909. Re: Need advice: Johnson Ranger

Newsgroup: rec.radio.amateur.boatanchors

Message-ID: <j7Rc8.5365$m15.3976@nwrddc04.gnilink.net>
Source record: 44337

Johnson Rangers don't need much in the way of audio mods - they tend to be great outta the box - but
after 50 years or so, it's impossible to predict VFO stability - normally it was adequate, but time
DOES take its toll - and it may still be good, or perhaps need anything from general cleaning and
contact cleaner - or various parts replacements...

Ya pays yer money, and takes yer chances! :-)

I spend alot of time with old radios...old caps are not your friends
:-) If you don't improve the AM drive you likely will at least improve
the audio quality!
-Bill

It's nice to see good 388's finally going for what they are worth ($600+ship in this case, with an audio mod and no top cover which many don't have & don't really need). And yes it is good on SSB with the popular 6BE6 mod (reversible for the fastidious).

## 1921. Help identify Johnson tube socket

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-21 00:35:25 UTC
From: n2kaq@arrl.net
Message-ID: <ddbbc7a3.0202201635.7f83fd98@posting.google.com>
Source record: 44249

I have a Johnson tube socket #124-116. What is this socket? I was
told it is for a 4cx250b with the screen bypass cap built in but I
really have no idea. Is there an eimac equivalent that I can get the
specs for it?
Thanks
Ed
n2kaq@arrl.net

# 1922. FS: KWS-1/75A4 GoldDust Twins

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-21 02:10:01 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <ZFYc8.39555$5Z3.529363143@newssvr14.news.prodigy.com>
Source record: 44250

After much consideration, I have decided to allow my beautiful Gold Dust Twins the opportunity to find a new home. Thy are fully operational as far as I know, over the time I have owned them I have only operated them on 75 and 20 meters for CCA nets.
The 75A4 serial is in the high 700's with SSB (stock) and (AM) 6Kc filters installed. both Collins.
The KWS-1 serial is in the 1300's so it is a late model with the reduction tuning knob.
Both I would say are in verygood to excellent condition.
This would be for pickup ONLY in the San Francisco Bay Area. WILL NOT SHIP even if you crate, I just don't have any free time to accomplish that task because of a very busy schedule right now.
I really love these radios, but time and money dictate otherwise right now. Let them give a great fan noise and gently warm your hamshack as they have mine.
$3000 for the pair only.
Just in case you might have an RCA-77DX in excellent condition to trade, I'd be open to a microphone /cash deal.
Jack W6ABC

## 1923. WTB B&W 852 tank circuit

Brings back memories. Always used to talk with a local on 15 meter AM who used the T-150, and we traded (competed) for signal reports from DX stations. Those were the days.

Looking for a nice TR7 with DR-7, CW filter, NB-7, FA-7, PS-7, RV-7, SP-75. Will consider individual pieces, but must have the NB-7 with a TR7 to start with. Please include TR7 serial number, description of appearance and your location in your reply. Thanks & 73.

# 1931. TRADE: Hammarlund HQ-129X Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-21 15:34:26 UTC
From: w8hro@arrl.net
Message-ID: <3c751164.5133181@news.bright.net>
Source record: 44260
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi Gang,

I have a very nice Hammarlund HQ-129X Communications Receiver that I would like to trade.

The HQ-129X was Hammarlund's first post-War receiver. This receiver was very popular with hams and SWLs of the day because it gave excellent performance and was affordable.

My radio is in very nice condition. The front panel looks great, and the cabinet is clean, with a few nicks in the paint. An area of the lid shows some paint fading. The chassis is very clean. Best of all, the set works very well. Some of the capacitors have been replaced, and the radio has a safe line cord.

I tend to favor National Company products. I would like to trade my HQ-129X for a National receiver of the 1930 to 1950 period, especially an HRO or ex-military recevier. I would also consider a Hallicrafters, RME, RCA, or similar receiver of the era.

I've posted three pictures of the HQ-129X. See them at:

http://www.bright.net/~tony/hammarlund.jpg
http://www.bright.net/~tony/hammarlund1.jpg
http://www.bright.net/~tony/hammarlund.2.jpg

Let me know if you're interested in a trade. Thanks!

Regards,

Tony W8HRO

From: mcalhoun@ksu.edu
Message-ID: <a539bm$i7c@unix1.cc.ksu.edu>
Source record: 44261

>Here's an even easier way to get a resonant dipole.
>Divide the frequency of operation in Megahertz by the number 468.
>....[snip]....

That doesn't compute (or else we all oughta be wondering
why 7 MHz is also known as "the 40-meter band"!):

7 / 468 ==> 0.015 feet, or about two TENTHS of an INCH.

Hmmmn. Thats even less than "two meters"!

468 / 7 works much better!

And when you're checking that "40-meter" comment, don't forget
that 468/7 calculates the (approximate) HALF-wave length!

As an alternative, qst is available by the decade on CD from arrl. Maybe you could just get the CDs and pull the pages off them?

Might be easier.

From: ON5ZO <on5zo@pandora.be>
Message-ID: <__pd8.169156$rt4.19101@afrodite.telenet-ops.be>
Source record: 44280

Dear OM

A friend of mine has a broken Kenwood TL-922 amp. The faulty part is the transformer of the power supply ("T2", according to service manual), we can tell and smell from the smoke coming out of it.
The Belgian Kenwood service center does not have this part available anymore, and according to them, both the stocks for this spare part in the USA as well as Japan are exhausted.
Now, my question is: does anyone know where to find this part, and if there is a manufacturer of equivalent transformers to replace it?

All help would be greatly appreciated!

Okay, all you vintage AM'ers, I need your advice...

I have a Johnson Ranger on its way to my shack. Although I've been a ham for 25 years, I've never operated any kind of vintage transmitter on AM (I've always been a CW operator). The little bit of AM operating that I've done has been with either modified CB radios or modern Japanese HF rigs. I'm going to call upon the experts to tell me what kinds of microphones would work well with the Ranger.

I love the looks of the classic Argonne AR-57. That elliptical shape just screams, "olde tyme radio!" From my pre-ham days on 11m CB, I recall that the dual element AR-57's sounded very nice on tube-type plate-modulated CB transmitters.

I have heard a lot of AM'ers using Astatic D-104 mics on their vintage rigs. That's another classic, but it doesn't have the visual impact of an AR-57.

I'm open to any and all suggestions.

# 1956. FS: Very Nice GPR-90 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-22 13:38:53 UTC
From: Bradley Stone <nb9mNOSPAM@reliable-net.net>
Message-ID: <u7dtfqifj6pb06@corp.supernews.com>
Source record: 44206

Guys:

I have an unusually nice GPR-90, with a near-perfect front panel, great operationally. Chassis is dusty but no serious corrosion. Controls are smooth as silk, and the audio is, well, perfect. There is only one problem: the original cabinet was damaged by UPS on its way to me from Texas. It can probably be fixed by a body shop, but is slightly deformed. The radio itself is GREAT. With original manual.

I paid about $700 for it several months back. I will take the first $500 FIRM because of the cabinet damage. I do have another solid, compatible, military-style cabinet (non-original) that needs paint for $40.00. Both plus shipping.

Please contact me directly by removing the "NOSPAM" from my return address.

Thanks!

-Brad, NB9M

Dean. I'm glad to hear that you've found a Ranger! It's the best of the breed. You'll find that the D104 will provide you with the best audio. I know there are many others and I'm sure you will have many other recommendations but for a lot of good reasons the D104 (no preamp) will do you the best. Try 'em all is my advice but keep a D104 handy!

# 1968. Old Abbott TR-4's - Looking for Information

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-22 20:22:01 UTC
From: troglodite@aol.com
Message-ID: <20020222152201.21381.00000099@mb-ch.aol.com>
Source record: 44195

Greetings,

I am looking for any kind of information on the old Abbott TR-4's, (or other similar rigs) that were used for the War Emergency Radio Service between 1938 and 1945. I am planning on demonstrating 1938 emergency radio technology as part of the 50th anniversary celebration of RACES in September. I've moved the old TR-4's to 2 meters from their original 112mhz frequencies for this purpose.

What I am looking for are any old pictures, advertising, or any other references to these transceivers. There is a picture in (I think) the 1936 Handbook of two guys sitting at a table with some TR-4's and some other equipment I don't recognize. This was supposed to be a typical WERS station.There are probably other pictures as well, I just haven't run across them. Anything that would enhance the display would be welcomed.

If there are enough people around the Chicago area that still have 2m AM capabilities, we may issue a special QSL for making a contact with one of these antiques. Otherwise, we'll just demonstrate a pair.

Thanks in advance for any assistance or information.

Doug Moore KB9TMY
(Lake County RACES)

Source record: 44196

But the trick is to find one of those mic connectors used by the Ranger. I'm still looking for one. It's got two contacts inside a screw-on ground shell -- one contact for mic audio, the other for PTT. Amphenol, I think.

You could replace this connector with a 1/4" "stereo" phone jack, but I've been told the funny connector is original, so you should try not to modify this classic rig.

My Ranger has the PTT hardware added. 73, Mike K. AA1UK

Message-ID: <3C76B31F.7E78C669@ix.netcom.com>
Source record: 44197

This is an excellent radio, but will need some fiddling
to make it work right. It will be mechanically unstable
when it's set up for a long time. It's easy to fix-
let me know if yours is unstable.

It will run on 115 VAC, but I don't remember
which pins. If you take it out of the cover,
you will see two pins with choke coils on them,
(if I remember correctly) These are the AC pins.
The connectors should not be hard to find.
The audio output plugs are readily available
from Fair Radio. They are the same plugs used
on the RT-70, -68, PRC-10 and similiar 1950s era radios.

Best,
Dave S.

1936 was well before WERS ( war emergency radio service). The TR4 used a super regen receiver and a modulated Osc. The transmitter was AM but with considerable FM

also. I saw a TR4 in use in about 1939 or 40 and that got me interested in VHF which
continues to this day.

If nobody comes thru for you with scans, I've got an old tattered Galaxy 5-MkII complete manual (40-odd pages) that I can photocopy plus a schematic (only) of the amp.
Track me down via direct e-mail....exray@coqui.net

# 1982. FS:Kenwood TS-520S/DG-5 Display

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-23 07:42:59 UTC
From: Jack <friday2k@pacbell.net>
Message-ID: <7KHd8.41955$EF2.1146940477@newssvr14.news.prodigy.com>
Source record: 44211

For Sale: Kenwood TS-520S in like new physical appearance 9.5. It looks really beautiful. Transmit power out and quality is to spec and audio sounds very good. Only problem is a drift on receive. The best I can describe is that occassionally the reciever will not stabilize on a particular frequency if you are spinning fast across the band. When you tune slowly it is not apparent. Receive gain however is fine. Lots of audio and very good receive signal strength. Seems like it would be an easy fix for someone with some test equipment and the time. Both of which I have not.
$250
Also have the DG-5 Digital Display
works great all elements on display light and are bright. cosmetically a 10.
$125
SOLD AS A PAIR FOR $350. Will sell DG-5 separately if TS-520S sells alone first.
73,
Jack

Message-ID: <MPG.16e11b358a9d730b989689@news>
Source record: 44213

Hello:

I haven't been able to find a Hallicrafters reflector with a valid email address. I subscribed years ago, and would like to subscribe again. Additionaly, does anyone know what happened to the huge Hallicrafters owners association website that was up a few years back? I can't find a trace of it. Maybe this is a sign that I am supposed to embrace the new millennium...

NAH!!!!

Thanks,

Source record: 44225

This is a very neat looking radio and a bit on the Rare side. I am looking for the best offer over $200.00 It is a STONER PR-10 transceiver that works on 10 meters. I was amazed how sensitive this radio was. The stations just boomed in. It has been checked out on both receive and transmit and is fully operational. AM-USB-LSB multi speed scan, RIT control and a neat looking digital display. I don't have any DC power cord or operating instructions for this radio. The wood case is in good condition. Each side has a small screw hole from a mobile mount. The up-down microphone works great! I would rate this radio an 8 on a scale of 1-10. Please look at the pictures below. Questions can be sent to roblonn@cox.net.

<><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><><>

F O R S A L E

EATON MODEL NM 17-27A /SL

UNUSED CONDITION

The EATON Model NM 17-27A /SL is a precision EMI-RFI receiver
covering the frequency range of 10 kHz / 32 Mhz in 8 bands.
Voltage measurment range is specified at .01 microvolt / 1 Volt.
These were the last revision of the NM 17/27 series and were
mfg. in 1988.

Internal solid state impulse generator for calibration source.
Has four bandwidths (100 Hz, 1 kHz, 10 kHz and 50 kHz). Internal
scan mode provides a scan of entire band in approx. 60 seconds.
X-Y outputs for plotter. Provision is made for limiting the segment
of the band to be scanned.

These units were received UNUSED in the original packing from the Govt.
Original Government cost was over $27,500.00 each. Two units are
available. This was the last model produced by EATON and, in our
opinion, these are perhaps the finest EMI-RFI receiver ever designed.
The incredible sensitivity of these units also make them an
excellent general coverage SW receiver. Just connect a Fz counter
to the local oscilator output jack on the rear panel (so exact
fz. can be determined) and you have one of the best sw receivers
ever built. Outputs are also provided to connect an oscilloscope
for spectrum analysis capabilities. Performs EMI-RFI emission
measurements from 10 kHz to 32 MHz in accordance with MIL-STD-461A
and other applicable military specifications and commercial standards.

Offered FOB our Michigan facility at $3,500.00 Each.
This is a chance to pickup an exceptional piece of equipment at
a bargain price. Complete operating/service manuals are included.
Offered subject to prior sale.

We also have a UNUSED NM-17/27 available at $1,850.00 AS IS, FOB
our facility. Offered subject to prior sale. This is an earlier
version of the NM-17/27 without the local osc. output jack.

We will consider TRADES and or reasonable offers on either
of these units.

We also have a long (12 page) list of medical, scientific,
research and electronic equipment that is available.
Request List 22112 if interested.

ever built. Outputs are also provided to connect an oscilloscope
for spectrum analysis capabilities. Performs EMI-RFI emission
measurements from 10 kHz to 32 MHz in accordance with MIL-STD-461A
and other applicable military specifications and commercial standards.

Offered FOB our Michigan facility at $3,500.00 Each.
This is a chance to pickup an exceptional piece of equipment at
a bargain price. Complete operating/service manuals are included.
Offered subject to prior sale.

We also have a UNUSED NM-17/27 available at $1,850.00 AS IS, FOB
our facility. Offered subject to prior sale. This is an earlier
version of the NM-17/27 without the local osc. output jack.

We will consider TRADES and or reasonable offers on either
of these units.

We also have a long (12 page) list of medical, scientific,
research and electronic equipment that is available.
Request List 22112 if interested.

# 2000. ARRL again affirms eQSL Cards -OK- for DXCC

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-23 21:46:18 UTC
From: Charles Johnston <ctj92@cableone.net>
Message-ID: <3c780dab$1@news.bnb-lp.com>
Source record: 44229
Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

The ARRL has recently reaffirmed just one week after the original historic announcement (08-Feb-2002) that eQSL Cards - ARE - accepted for DXCC....this remark from the eQSL Webmaster found at this

URL: http://www.eqsl.cc/qslcard/comments.cfm
"ARRL reaffirmed today that it will accept eQSLs that are mailed. AG or not" (Webmaster)
15-Feb-2002

Rene,
You are the guy that won that 516H-1 on Ebay!
I have a question: Is the 516H-1 the solid state version of the rotary power supply for the 618S-1 ?

In any case, I know a guy who has the full tecnhical manual for the 618S-1/MC, because he bought it from me last year. He lives in Belgium, Matt Driessen ON8PO

His phone number is +32 897 14734

Source record: 44234

Collins 75A-4 in excellent condition, no mods. Serial 78x, with Original Manual.
Stock filter. Works beautifully.
$800

Prefer pickup as not much free time to pack and ship and don't want to risk damage on this very nice radio.

Located in San Francisco Bay Area. Will meet or deliver within reasonable distance from SF.

It's obviously SPAM since it's followed up to all sorts of groups that don't
care!

Somewhere (I think it was on the eQSL site) I saw where you had to have the
card mailed from eQSL (at a buck a card). Seemed to me exactly like the
sort of thing the League would dream up. Still, a buck is better than 3
IRCs.

In any case, you're right. If it were the case, there would be something on
the ARRL site. The last mention I could see was a year ago where the league
was working with a software vendor to provide a secure eQSLing service.

..

What's the difference? Ain't nothin' "historical" about this announcement.
What the ARRL (may have) said is that they will accept the (e)QSLs that are
***mailed***. I fail to see the difference between a mailed QSL that had been
verified and printed by a QSL manager and a mailed eQSL that had been
verified and printed by the eQSL service.

Knight TR-106 with the matching V-107 VFO unit
and cables. This is a 6m AM rig with built-in speaker. Silver and blue
with a
great styled case.
Front panel looks really good. Has all original knobs. It is NOT in
mint
condition, but shows less than normal wear. No bad dents or dings.

The power cable to the TR-106 is missing but you can easily make one.
I
have not tested it but it is all there. No modifications or damage has
occurred.
Will sell for $135.00 plus shipping

FOR SALE:

Collins 75A-1 Receiver with filer. No case. Needs work but very much
restorable. No case. All original knobs.
Picture available on request.
Will sell for $275.00 plus shipping

Hallicrafters S-38D receiver, silver case and front panel.
Has all original knobs. Bandspread dial is slipping. Needs new
output transformer, but is otherwis ein good shape. Case has some
wear and scratches, but no bad dents etc. A very restorable
receiver. Will sell for $45.00 plus shipping

Hallicrafters S-40A communications receiver
Serial number HA-90221
Nice receiver - All original, with a fine looking
front panel. Original knobs, dial etc. Covers 540 kc. to 54
MHz in four bands, with sensitivity control, AVC on-off, tone
control, noise limiter, BFO and send-receive switch and rear
terminals.
Also has front panel headphone jack. Built in speaker. The set lights
up and appears to be working but has a loud hum. Likely just
needs a capacitor replaced. Will sell for $75.00 plus shipping

Realistic DX-160 Receiver with Realistic speaker
Excellent condition general coverage shortwave
receiver set. Will sell for $75.00 plus shipping.
Pictures available on request

Knight TR-106 transceiver with the matching V-107 VFO unit
and cables. This is a 6m AM rig with built-in speaker. Silver and blue
with a great looking case.
Front panel looks really good. Has all original knobs. It is NOT in
mint
condition, but shows less than normal wear. No bad dents or dings.
The power cable to the TR-106 is missing but you can easily make one.
I have not tested it but it is all there. No mods or damage.
Will sell for $135.00 plus shipping

BC-733F Receiver with dynamotor DM-53A for 28 V
DC operation.
Black case, complete and in good shape. Has
service and inspection tag from 1959.
Comes with the connector and the original
shockmounts.
Looks to be in very good condition. Unmodified. Will sell for $30.00

Picture available on request

R-268/ARN-5B Receiver - Black case, similar to BC-733F, but marked for 24V DC
and no dynamotor. It's all there including the shock mounts and special
bayonet connectors. Looks to be in very good condition. Unmodified. Will sell for $30.00
Picture available on request

I've wondered about this too. The HW-100, -101 and -16 also have phenolic boards.

Making glass copies shouldn't be that hard because the boards are all single sided. Plus the holes and traces are huge by current standards.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

Collins 208U-3 2-30 Mhz RF Amplifier 3 KW in
good condition as removed from military service.

This is a military/commercial quality amplifier that uses a single
4CX3000A to produce 3 KW PEP or average power with only
0.2 watts of input drive.

These are automatically tuned with a servo system that takes about 10
seconds to tune-up.

Primary power input is 200-250VAC, 3Ph, 47-60Hz.

Net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would
make a great addition to your station.

I am offering these units less the 4CX3000A Final tube. They otherwise
are apparently complete however. May require some minor repair or
adjustment and are being IS BEING SOLD AS IS!
Photos have available upon request.

A full description is on my web site.
http://www.columbiaelectronics.com/collins_208u_3___hf_rf_amplifier.htm

The closeout price is $1500 unpacked FOB Somis, CA. I prefer that it be
picked up however I can arrange for it to be professionally crated at
my cost.

There are two units available at this price. The pair can be purchased
for the special package price of $2,500.00 unpacked FOB Somis, CA

I also have one additional incomplete unit good only for a parts bank
that I will include for $500

A copy of the service and parts list is included at no cost.

I also have one 4CX3000A Tube that was rebuilt by ECNCO and never used
since. It is $650 and is guaranteed to be perfect. Sold only with a
208U-3

If any one is interested in this item please contact me directly and not

Sunair GSL-1900A 1KW PEP or Average power RF Amplifier covers 1.6 to
30MHz.
Uses a single 4CX1500B and require a nominal 40 watts of drive.
Automatically tuned in a few seconds.

The GSL-1900A consist of the LPA1900A RF Amplifier and PS-1900A Power
Supply..

As removed from military service in good condition with a copy of the
manual at $1200.00 FOB Somis, CA.
The interconnect cable is not included.

There are complete specifications of this on our web site.

Right... Don't join. When they come to take away your frequencies, your operating privileges and eventually your entire hobby, just lock yourself with a couple of buddies in a shack in Montana and make an armed stand-off against the feds.

A typical CB mentality if I've ever seen one.

> Right... Don't join. When they come to take away your frequencies

This month's Scientific American had an article on using power lines for LAN connections. When I saw that they had broken the 4-20MHz spectrum up into 84 wideband channels it really raised my eyebrows. Sounded like a great opportunity to QRM almost all the HF bands. And are we really going to get on our neighbors case because their computer is keeping us off 40 though 15?

But then I read a little further. They blocked out the ham bands from their frequency plan. Seems they knew the League would be all over them like a cheap suit. Looks like they learned a lesson from the RFID crowd. Not clear who is going to win that one yet, but the League has kept them from wrecking 440 for several years now.

Source record: 44176

This Heath SB-401 5-band SSB/CW transmitter is in good to excellent physical and electrical condition. It is one half of the famous "Heath Twins" (SB-301/401) and is a real joy to use. It has been used on the air recently and garnered good signal reports (and great audio reports!). It can be had with or without the Crystal Pack, which allows it to be used standalone with any receiver.

Pictures are available at:

http://home.earthlink.net/~ab7yd/radios/SB401fnt.JPG

http://home.earthlink.net/~ab7yd/radios/SB401inside.JPG

If you are a fan of Heathkits, you'll like this rig a lot.

Price is $85 (without the crystal pack) or $105 with the pack, plus shipping costs from Seattle.

73, Bruce AB7YD

Beautiful operational KWS-1 high serial number 13xx with reduction tuning
in CCA very good/excellent condition. All relays/hoses.
Also a 75A-4 receiver in excellent condition with 3.1 and 6Kc filters. 7xx
serial.
Both fully operational. Both with original manuals.
Want to sell as a set but will sell receiver separately if transmitter sells
first.
Together: $2750

KWS-1 $2000
75A-4 $800

Because of vintage and weight, for pickup only in San Francisco Bay Area.

==========
Bob:

Try Go-Jo, the waterless hand cleaner. Get the plain, original white stuff without the pumice and orange smell. Go-Jo cuts through the crud and doesn't remove paint or other finishes. Your hands will be clean when you are done too!

Best Regards,

Ed

In similar cases, I've been using lukewarm water and light soap, with good results. When this is not enough, I use a creamy, ammonia smelling, grease remover detergent, here (italy) sold as "Cif" (I seem to recall hearing it called "jif" or "jeef"...).

Regards.

Go very delicately on the painted dial scales, for they often will
flake off. For the rest, the whole rcvr may be hot-hosed outdoors
with a mild detergent and well-dried out before engergizing (with the
usual precautions).

Hi all,

I am looking for the RF deck section of a FRR-59A vacuum tube HF receiver. This is a large & complex radio that was made in two sections. I have the IF/audio section and need the RF deck to complete it. The other half must be somewhere in Australia!!

I would be grateful for any help or clues as to the whereabouts of the missing half!

Thanks,

Morris VK3DOC

Insert an audio impedance transformer in the line. It should
be fairly easy to find one that will transform those two very
standard impedances. Check Radio Shack.

Message-ID: <3C7AE0D0.6D048209@mediaone.net>
Source record: 44097

1: Looking for the meter face cover for an old simpson 260 multimeter. It is the frame that holds the glass and the glass. It screws on to the front of the meter.

2: looking for a couple of rectangle meters to fit in a 1 1/2" X 3" hole. Actually need 1 good meter ( can use 50 ma or less range) and one bad one. Just need the front part of the case. Using it for a face for a dial that will go behind it.

3: Looking for a tear drop style meter that is surface mounted. Only the terminals go through the panel. I think Henry radio used those on their amps.

Thanks
Gary K4FMX

I'm about to embark on re-capping the 2nd converter module of an
SX-101A. Has anyone else done this and have any suggestions? Is it best
to de-solder all the coax and take it out entirely?

Thanks,

Dave

# 2074. help with S-36

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-26 04:48:48 UTC
From: michael smith <fishperson@worldnet.att.net>
Message-ID: <QsEe8.9231$FE4.561072@bgtnsc04-news.ops.worldnet.att.net>
Source record: 44102

I have a S-36 that has had the T-10 section of bandwidth altered. This is the late S-36 that has the 36A style panel And chassis layout. My manuals are for the early model that looks like the S-27
I also have one for the 36A and a RBK schematic. The problem is with the location of R-9 (10 Ohms) the S-36 schematic has it in the wiper lead for the switch, the S-36A has it in the tap for the wide position and the RBK has it in the tap for the narrow position !
Thanks Mike Smith

## 2075. Fisher of a different stripe

These Fishers aren't Avery's babies

Found a TS-25 & a RS-25 RX/TX pair near Noble, GA Sat. These seem to be a xtal-controlled ship-shore pair made ~1940. All capacitori were Oakland, CA Girrard-Hopkins which were in 1st HP 200s.

TX uses 807 & 2 6L6 mod.s. TX & RX xtal controlled w. on 4 chan.s w. great big FT171 xtal,s

Tho look to be pre-WW2, each has MFP '51 stamp.

Go figure.

C'mon left coasters

Marty

Radio technology around WWII has some interesting contrasts - some incredible advances were made very fast - yet a _lot_ of tried and true (older) "technology" continued to be the "mainstay" of much of "production" equipment.

For instance - much of the BC-348's design is pre WWII - yet it remained in production until the mid 50's. You also need to consider that while most of the really "nifty" stuff of WWII is commonly known and basically obsolete now - much was secret until quite some time after WWII.

Also - with a lot of surplus on the market (i.e. pre / during WWII technology stuff) - sometimes that would help dictate what parts (technology) were used in many products after the war - for quite some time- as more profit could be made using those cheap(er) surplus parts than the latest "gee-whiz" parts.

In this case I suspect the 807 (and associated stuff) might be contributors here. A very competent output tube - (about 50W), known as the VT-100 in military nomenclature was very commonly used - as was (is) it's 12V sibling the 1625-- so were available dirt cheap after WWII (less than $1.50 by 1955)-- which made them very popular with HAMs- and likely commercial manufacturers as well.

best regards...

If I can remember well, the VFO is made with a fet oscillator and two bjt as, respectively, separator and amplifier; seems likely that VFO output is far too low, so may be one of the bjts is dead.

Regards.

That makes me think they might be the "other Fisher" - Gerhard Fisher of Fisher Research Labs fame. Is there any indication (other than the caps) of California manufacturer? Fisher labs was in Palo Alto just before WWII - they moved to Belmont in the 60's... They made many items for the government during both WWII and Korea.

Sherry

Amateur Radio Newsline Report 1280 – February 22, 2002

Amateur Radio Newsline report number 1280 with a release date of Friday, February 22nd, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ultra-wideband is here and the fight to keep high power unlicensed devices off of 70 centimeters escalates. These stories are first on Amateur Radio Newsline report number 1280 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ALLOCATIONS: FCC APPROVES ULTRAWIDEBAND

The nation's communications regulators have approved limited use of a new technology that is actually capable of seeing through walls, finding disaster victims and even preventing car crashes. Known as ultra-wideband, is a new method of wireless transmission is being promoted as a potential solution to the squeeze on the nation's airwaves created by the explosion of mobile phone, pager and other wireless device usage. We have more in this report:

--

Ultra-wideband devices will for now operate only in 960 MHz and in the 1.99 to 10.6 GHz bands. In theory, at least, you should never even know that they are there. This is because proponents of ultra-wideband claim that interference to other spectrum users is virtually non-existent -- based on the ultra short duration and pulsed nature of the transmissions. And the Federal Communications Commission agreed when it voted unanimously about a week ago to allow the technology to be used on a limited unlicensed basis.

The FCC proceeded cautiously out of uncertainty whether ultra-wideband could coexist with other strategic services. In other words, it wanted to be certain that it would not cause harmful interference to military communications, cellular telephones and the Global Positioning System. So it only provided ultra-wideband access to a small portion of R-F real estate. None-the-less, the real-life implications of the limits of the FCC decision are far reaching.

Up to now the military has been the only ultra-wideband user. This FCC action will allow for wireless communications and accurate readings of location and distance that have a wide range of civilian applications. For the general public this includes wireless, high-speed transmissions over short distances. Possibly as a way of sending video from a camcorder to a television set or data from a personal digital assistant to a laptop computer. The technology might also include sensor systems in cars to alert a driver to movement near the

vehicle. This could prevent collisions and promote smart air bag deployment.

Otherwise, the FCC has limited use of ultra-wideband technology to public safety. Only police and fire officials, scientific researchers, mining and construction companies will be permitted the use of so-called ground-penetrating radar devices. These would only be permitted to radiate straight down with little or no signal leakage in any other direction. The FCC notes that this system could help rescuers find victims in rubble following a disaster or locate ruptured underground pipelines without digging up entire neighborhoods.

The FCC severely limited distribution of ultra-wideband devices that can see through walls and detect motion within certain areas. Only law enforcement and firefighters will be permitted to have them. In other words, you won't soon be buying a home camcorder that can peer through your wall and into your next door neighbor's apartment. And you probably never will.

Right now the introduction of ultra-wideband will have very little impact on ham radio due to the limited spectrum being allocated to it. But it's use could be expanded in the future if it's proved not to interfere with existing military and public service communications.

For the Amateur Radio Newsline, I'm Robert Sudock, WB6FDF, in Los Angeles.

--

If ultra-wideband is successful it could eventually open up a whole new world of communications for ham radio. For starters, think in terms of so-called smart software defined radios. Radio’s that are so smart that you tell it who you want to talk to and it calls you when that person is ready to hold a QSO.

More on this emerging technology in future Amateur Radio Newsline reports. (FCC and other published reports)

**

SPECTRUM SHARING: SAVI TECHNOLOGY VS. HAM RADIO

The fight to keep radio ID tags off the 70 centimeter ham band is entering the home stretch. This is because the FCC has set March 1st as the deadline for reply comments on RM-10051.

RM-10051 is the Rule Making designation given to a request from SAVI Technologies, Inc. As previously reported, SAVI has petitioned the FCC for it to be allowed to develop and market a family of Part 15 devices designed to operate on the amateur 70 centimeter band. These Radio Frequency Identification Tag devices would operate at a power level far higher than similar devices now marketed and that’s where the real problem with the proposal lies.

Ham radio educator Gordon West WB6NOA, is an expert in weak signal operations. West says that it will mean problems for weak signal and satellite operators:

--
WB6NOA: “I think that the presence of any strong; either continuous or intermittent signal near the weak signal portions of the [70 centimeter] band is going to dramatically cause interference to those of us that monitor for either weak signal beacons -- such as those heard on the West coast that come in from Hawaii -- or for those who operate weak signal SSB and CW satellite.”
--

West says that even some of the micro power Part 15 devices already sharing the 70 CM band are causing major problems:
--

WB6NOA: “Presently on the weak signal 70 centimeter band we are having to put up with low power, intermittent [home] weather stations. You know, those weather stations that you see advertised as transmitting in their data on 432 and 433 MHz. Even these weather stations when they transmit will cause the AGC in my receiver to pump and it takes two to three seconds before the AGC returns [to normal] before I can begin listening again for weak incoming beacons.

Those [transmitters] are just a few hundred milliwatts at about 300 to 500 feet away. You can imagine when these more powerful transmitters come on the air in the 70 centimeter portion of our Amateur Radio band.”
--

But exotic modes won’t be the only ones affected. There is more than ample reason to believe that FM repeaters, remote base and A-T-V operations could suffer as well. And with the reply comment deadline only a few days away Dick Isley, W9GIG, the Secretary of the National Frequency Coordinators Council says that an e-mail and fax campaign to congress may be the only way to get RM-10051 killed.

In an e-mail to the Amateur Radio Newsline and other Amateur Radio publications, Isley says that it is imperative that hams send electronic messages their elected federal representatives in opposition to RM-10051. Isley believes that if 10,000 or more hams respond to this call, the SAVI Technology proposal could become a political hot potato. Hopefully one that is so hot that the Commission drops it completely. (ARNewsline(tm))

**

SPECTRUM SHARING: THE ARRL VS. THE FCC ON SAVI TECHNOLOGY

As hams get ready to write e-mails to congress, the ARRL is following a different diplomacy. It is challenging the FCC’s authority in this matter saying that the agency 'cannot legally proceed with the rules proposed for unlicensed Radio Frequency Identification tags at 433 MHz. Jim Haynie, W5JBP, is the President of the American Radio Relay League:

--
W5JBP: “You have to go back and look at the Communications Act of 1934, as amended. What Congress said was that in equipment that puts out a signal at a certain level must be licensed. The FCC has said that they are going to make this a Part 15 device does not require a license.

Our [ARRL] argument is that they cannot do this by law. Congress would have to pass a law to allow them to make this powerful radiator a part 15 device. In other words, change the whole parameter of what Part 15 [devices] are."
--

Haynie says that the League has said it will 'do whatever it takes to keep the FCC from putting these Radio Frequency Identification tags in the 70 centimeter band. You can hear more from President Haynie by tuning in right now to the RAIN Report. It in streaming audio at www.rainreport.com and on the phone at 847-827-7246. (ARNewsline(tm), RAIN, ARRL)

(5 sec pause here)

**

PUBLIC SERVICE: HAM RADIO AT THE WINTER OLYMPICS

Ham radio was a major player at the 2002 Winter Olympics. Not competing in the games, but working in support of overall security. Amateur Radio Newsline's Norm Seeley, KI7UP, has more.

--

According to an ARRL bulletin, Amateur Radio volunteers assisted with security and were ready to provide back-up communication for the Winter Olympic games. According to Utah ARRL Section Manager Mel Parkes, AC7CP, a special public safety organization called the Utah Olympic Public Safety Command was created by the various local and national public safety organizations that provide the security necessary for the international event.

According to Parkes, Section Emergency Coordinator John Mabey, W7CWK, and Brent Thomas, AC7H, from the State of Utah Comprehensive Management Office began working on this effort over a year ago. Mabey, along with Davis County Emergency Coordinator Hall Blankenship, and several other hams headed up the effort to provide emergency backup communication for the Olympic Security Command. At its height the winter games the ham radio group numbered close to 200. These radio amateurs provided back-up communications with the ability to reach numerous Olympic venues 24 hours a day.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Parks had some nice words for the corps of Olympics communications volunteers. He said that the hard work and dedication by all these dedicated Amateur Radio Operators certainly contributed to a very successful and safe Winter Olympic Games. (ARRL)

**

ENFORCEMENT: DON’T PLAY MUSIC ON THE AIR

The FCC has told three hams that they have been caught allegedly playing music on the air. In letters to the trio, FCC Rules Enforcer Riley Hollingsworth says that such transmissions are contrary to the Commission's rules regarding the Amateur Radio Service:

--

Hollingsworth: “We warned Ronald Marshott, N2NGY of Berkely Heights New Jersey, Frank Grzych W1FU of Johnston Rhode Island, Martin J. Bellingeri, W2OT, of Saddle Brook New Jersey and Zack Elliott K2BLU Haworth New Jersey about playing music on the 75 meter band.”

--

According to Hollingsworth the transmissions took place on 3.832 MHz on the evening of November 27, 2001. (FCC, RAIN)

**

ENFORCEMENT: FCC VS. K1MAN – CONTINUED

The saga of the FCC versus K1MAN continues. This as the FCC issues yet another letter to the Belgrade Lakes Maine ham. Among other things, this time the FCC is warning not to put phone recorded calls on the air. Riley Hollingsworth, is Special Counsel for Amateur Radio Enforcement the regulatory agency:

--

Hollingsworth: “We sent a combination warning letter and explanatory letter to Glen Baxter, K1MAN, of Belgrade Lakes Maine concerning deliberate interference, lack of station control, sending felony complaint affidavits to those whom he perceives were interfering with him; tape recording telephone conversations without permission and broadcasting them.”

--

In its letter the agency warned that it is also important for K1MAN to understand that if these matters are not resolved, his ham licenses will not be routinely renewed the next time he applies. Instead Baxter’s licenses will be designated for hearing before an Administrative Law Judge. In such a proceeding, the FCC says that Baxter would have the burden of proof to show that his licenses should be renewed. (FCC, RAIN)

**

ENFORCEMENT: ILLEGAL CORDLESS PHONE SELLER FINED

Remember those high power cordless phones that we reported on a few months ago. The ones found operating in the 2 meter and 220 MHz Amateur bands? Well an alleged source of some of these illegal devices has been told it will have to pay a hefty fine for selling them here in the United States.

On October 23, 2001, the Commission issued a Notice of Apparent Liability for Forfeiture in the amount of $7,000 to Electronics Unlimited of Miami Florida. This, for allegedly marketing of a non-compliant high-power cordless telephone called the Alcon AT 526.

The company was afforded ample time to reply to the allegations. The FCC says that Electronics Unlimited never did file a response. Based on the information before it on February 15th the FCC affirmed the forfeiture order and gave Electronics Unlimited 30 days to pay. If the Electronics Unlimited fails to pay the forfeiture within the specified period of time the FCC says that the case may be referred to the Department of Justice for collection. (FCC)

**

FM AND REPEATERS: UNYREPCO NEW MID VALLEY NY REPEATER COORDINATOR

Repeater owners and operators of other F M and packet relay devices in Orange, Putnam, and Sullivan counties in York State have adopted the Upper New York Repeater Council, Inc. to provide frequency coordination services. This was an area originally represented by the long defunct North East Repeater Association that went belly-up in the early 1970's. It then used the services of the Tri State Amateur Repeater Council until that organization disbanded a few years ago. Since then the region has been on its own.

This process of the Upper New York Repeater Council adopting the region was completed following a review of the existing systems by the established and recognized adjacent region frequency coordination councils. The change became effective February 13th.
More information is on the available on the web www.unyrepco.org (UNYREPCO)

BREAK 2

Here when you need us 52 weeks a year. We are the Amateur Radio Newsline, with links to the world from our only official website at www.arnewsline.org.

(5 sec pause here)

**

EMERGING TECHNOLOGY: SURFING AT 39000 FEET

The Federal Communications Commission has granted Boeing a license to provide high-speed Internet service to airline passengers. Boeing said the FCC approval clears the way for its planned in-flight Internet service called Connexion. Connexion -- Spelled C-O-N-N-E-X-I-O-N -- will enable airlines and other commercial jet operators to offer real-time, high-speed Internet and intranet access, television and e-mail. This, while flying over United States territory and waters. (Boeing)

**

HAM RADIO IN SPACE: A TEACHERS GUIDE TO ARISS CONTACTS

Tony Hutchinson, VK5ZAI, says that he has updated his web site with a "Teachers Guide" for schools that have been selected to speak with the crew on the I-S-S. On his pages, Hutchinson provides what amounts to a final check list of things that must be done in the weeks prior to the contact taking place. Also posted is a list of the actual questions that students have asked in the past.

Tony Hutchinson is the Amateur Radio on the International Space Station Coordinator for all of Australia. To find his very interesting resource, take your web browser http://www.electric-web.org/teachers_guide.htm. (AMSAT-NA)

**

INTERNATIONAL - SOUTH AFRICA: SARL READIES FOR WRC 2003

The Independent Communications Authority of South Africa has invited the South Africa Radio League to participate in the preparatory work for the World Radio Conference in 2003. SARL President Hans Potgieter ZS6ALJ will be joining I-C-A-S-A sub-committee 4 which is tasked to develop South Africa's position on Maritime mobile, Amateur and Amateur Satellite, and broadcasting services in the Medium Frequency and High Frequency bands. A number of specific amateur related items are on the W-R-C agenda, including the realignment of amateur and broadcasting allocations around 7 MHz, and possible revisions to articles S-1, S-19 and S-25 of the international radio rules. (SARL, Q-News)

**

CONTESTS: VHF SPRING SPRINTS

Attention VHF and UHF contesters. K4AR has announced over the VHF Reflector that the VHF Spring Sprints will be held again in 2002. The Sprints are sponsored by the East Tennessee DX Association. The dates, official rules and lots of other information can be found at www.etdxa.org/vhf.htm (VHF Reflector)

**

DX

In DX, 9V1YC reports that the 2002 South Sandwich and South Georgia DXpedition is now officially over with all operators are back home safe and sound. 9V1YC says that the DX-pedition achieved all of its goals and made an astounding 70,428 QSO's using SSB, CW and RTTY. On-air time was 80 hours at VP8THU, and 7 days, 10 hours at VP8GEO. (RSGB)

And husband and wife K1CN and N1EBL are in the Bahamas and signing C6AMM and C6AWW from now until the 2nd of March. Operation is from Harbour Island, which counts as Islands on the Air number NA-001. (RSGB)

**

THAT FINAL ITEM: HAM RADIO SEARCH AND RESCUE

And finally this week, ham radio played a big role during a simulated emergency that takes place in a somewhat unusual setting and at an unusual time. From Birmingham, Alabama, Newsline's David Black, KB4KCH, reports:

--
Most emergency drills take place during the day, maybe in a parking lot or open field. But volunteers in Alabama put on their jackets and hiking gear and grabbed their flashlights for an exercise near Birmingham February 8th. The setting: Oak Mountain State Park, Alabama's largest park with 60-thousand acres and dozens of miles of trails. Members of the Vulcan Trail Association practice what they might have to do for real. James Pilman, KA4ZQA, is event coordinator:
--
PILMAN
BITE IN This is a search
OUT a couple more
--
Pilman assembles teams of experienced hikers teaming with amateur radio operators.
--
SOT1 IN Earl
OUT you're goin' out.
--
This search takes place at night. With temperatures in the 40s, three teams head out into the wilderness, maintaining a 2 meter contact with a Net Control at the park headquarters. Team members get a briefing on their missing person.
--
SOT2 IN There's a gentleman, he's about 28 years old
OUT at the marina
--
The sky is full of stars as teams walk up and down trails, looking for evidence of their target.
--
SOT4 IN We're starting out on the trail
OUT W4CUE
--
After about an hour and a half, one team finds its man and radios back in. The net closes, but only after each team arrives safely back at headquarters. Kenner Morrow is a naturalist with the Park:
--
BITE/KEENER IN The value is being able to coordinate
OUT there are any emergencies.
--
Ken Moore AB4WL, provided communications for one team. He calls it a rewarding experience.
--
BITE/MOORE IN Just bein' able to help
OUT participate and volunteer.
--
For Chuck Arthur, KF4SSX, tonight's exercise was his first search and rescue practice:
--
BITE/ARTHUR IN To me as an amateur
OUT into ham radio
--

In the past, these hikers and hams have helped search for missing adults and children during real emergencies, sometimes dealing with extreme cold and the hazards of rugged terrain at night. Tonight's drill went just about flawlessly. The people who took part in this event know they might get called again for real -- this night in the cold wilderness has helped them to be a little better prepared.

From Oak Mountain State Park, Alabama, I’m David Black , KB4KCH, for The Amateur Radio Newsline.

--

David says that the trail group usually holds two lost hiker searches every year. (KB4KCH, ARNewsline(tm))

I have a Simpson (Series 1?) meter cover, OK, but needs good cleaning-free
but you pay shipping, like $3.50 priority mail. If you want the whole
meter, same deal, but the meter is shot, don't know anything more than that.
$6.50 for the whole unit.

Email me if interested.

## 2093. Help needed troubleshooting KWM-2

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-27 12:37:32 UTC
From: Michael White <m.white66@verizon.net>
Message-ID: <gq4f8.4570$E11.67@nwrddc02.gnilink.net>
Source record: 44121

My early model KWM-2 (11xx serial number) has developed a fault I can't find. The receiver works fine. On power-up, the transmitter works fine at first, but after a few minutes warmup, the grid drive, ALC and output all go to low or zero, both on SSB and CW. During the first 5 minutes or so, snapping the PTT a few times brings it back, but after that it doesn't. I've tested all the tubes (on a TV-7 military tester), carefully cleaned all three relays, used DeOxit on all the tube sockets and switches and freeze-misted all the composition resistors underneath; no joy. I'd greatly appreciate any pointers to finding the problem. Thanks.

Mike, N4PDY

From: Roger Leone <arleone@inreach.com>
Message-ID: <pd7f8.11831$EA6.193355874@news.inreach.com>
Source record: 44126

Mike:

Some suggestions:

If you are losing grid drive, the finals are probably OK. I would focus on the preceeding stages.

1. Replace V5 & V6 (12AT7), V7 (6DC6) and V8 (6CL6). You could do them one at a time. This is based on the fact that tubes in a tester don't always behave the way they do under RF load. One of them could have a problem when hot in the radio but not in the tester.

2. Check the plate voltages on these 4 tubes with the radio cold and compare to voltages after warmup.

3. Check the screen voltages (V7 and V8) with the radio cold and compare to voltages after warmup.

4. If those ideas don't pay off, try looking around V17 (6BN8) the ALC rectifier.

5. An RF probe will allow you to see how far the transmit signal is getting through these stages, if DC voltages don't show anything.

I hope you get some other suggestions.

Good luck and 73,

Roger K6XQ

Have the following two rigs for sale. Prices are PLUS shipping from 96003.

Swan Astro 102 BX...not Cubis,but Swan....in very good cond. Works good and has full output on all bands. Comes with the matching PSU-6 speaker P/S,Swan desk mic (Shure 444D),and original manual and misc.paper work. Price is $300.00. See pics at the link below.

Ten Tec 540 aka Triton IV and matching 262M P/S VOX unit. This is one of the cleanest Tritons I have seen. All the lettering is intact,works 100%,etc. Does not have the NB or narrow CW filter. Comes with the original manual. Price is $275.00. VERY nice rig.

Pics can been seen at http://community.webtv.net/KF6IKC/doc

The suggestion to check the plate/screen voltages is a good idea.
Repairing a FT101E with same tbl report. Main power xfmr winding gone
sour.
Have a good look at these. Check all diode HV multipliers if thats the case.

Source record: 44134
Cross-posted to:
rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

Kind of confused by this one (the following). I have received many QSL's
from DX that I did not originate (I did not send them a card first) so what
makes receiving a card from a eQSL log any different than a paper one ??

Come on people eQSL are the way it has to be done going forward into the 21st
Century.

Ron

"eQSL does not do this. eQSL receives a log and immediately makes
cards available to all stations in that log without checking the
information the other station has in his log or on his QSL. This
is not acting as a QSL Manager; this is just plain presumptive
QSLing. It is not adequate that the receiving station look at
the QSL and confirm it. How many do you think will refuse a QSL
from a really rare one who put the wrong call in his log so the
eQSL went to the wrong person, or if the signal reports don't
match, etc? There is no independent check here, thus eQSL is not
performing the duties of a QSL manager, thus the eQSLs are not
accepted by ARRL.

Hi,

Due to moving, I have following equipment for sale in the Toronto
area. Preferably you will pickup equipment yourself. You pay shipping
costs if you live outside the Toronto area.

Here is my list. All equipment is in excellent working condition:

1. Heathkit SB401/303 combo (10-80m TX/RX) + manuals with Shure 400
microphone
2. Heathkit HM-102/1KW, 1.8-30 Mhz Watt/SWR meter
3. Heathkit HM-2102/1KW, VHF Watt/SWR meter
4. Heathkit HD-19 Phone Patch
5. Anadex Frequency Counter CF-700A, 5Hz-1GHz
6. David Clark H7010 noise cancelling headset/microphone
http://www.davidclark.com/h7010.htm
7. David Clark H-133C/A1C noise cancelling headset/microphone
8. H.P. 400D Voltmeter
9. Bearcat 300 scanner
10. Daven DP-182 Audio Decade Attenuator box

# 2109. HW-16 XCVR & HW-10B VFO Manuals

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-28 03:58:37 UTC
From: Don <DON-COM@attbi.com>
Message-ID: <NVhf8.17409$Dv1.61830@rwcrnsc53>
Source record: 44139

Received some old but operational gear for my 10 year old Harmonic who wants to get into Amateur Radio, with the exception of the Manuals, they did not come with the rigs.

Need to locate photo copies of the HW-16 and HW-10B Heathkit Manuals.

Willing to pay for postage and copy costs if you can help me out.

TNX and regards,

Don W6PJJ
Sacramento, CA

# 2110. Re: FS Hard to find Bristol Wrench sets

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-28 04:00:52 UTC

Are the bristol wrenches you have the same as I've purchased on ebay; Made by bristol locknut Co.? I broke one by twisting it too hard, and was wondering if there is a sturdier set?

## 2111. Considering a refurb for my S-40A

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-28 04:19:58 UTC
From: John LeMay <jlemay@njmc.com>
Message-ID: <MPG.16e779feda8cf48a9896f5@news.cis.dfn.de>
Source record: 44141

Hi folks,

I'm considering sending my S-40A out for a well needed refurb. Besides cosmetics, it's not giving me audio on a couple of speakers I've tried, the caps look like they could use to be replaced, etc.

Anyway, I'm not up to the job myself. I was wondering if anyone could recommend anyone that does refurbs, preferably someone that has done a few Halli's in the past.

thanks!

400 Complete SAMS Photofact Sets beginning with #100 through #700 "Oldies"

Each of these are a "Complete numbered Set" Including 12 or more different folders, pictures & schematics of new (OLD) production TVs, Radios, Phonographs,
Audio Amps, PA's. Desk, Consoles & Table top Models included. AC/DC combo's, AM, AM/FM and Short-wave. These Sets include very few CB's and Auto Radios as they were printed as other Sets. Some popular Amateur Radio Transmitters/Receivers
like Hallicrafters, Hammarlund, and Heathkit are listed.

Each set includes over 100 pages. #100 is dated July, 1950 and
#700 is dated Dec, 1963.

I will not break apart a Set to sell a folder. Please be specific about your inquiries as I have no intention at this time to post separately the indexes of the 525 Sets. (Search site www.samswebsite.com/photofact/pf_search.asp )

These Sets start on eBay for an average of $6.00 each plus shipping.

$1.50 ea. Plus USPS shipping of $1.85 Media rate or $3.50 Priority.

5 for $7.00, Shipping of $3.75 Media rate or $7.70 Priority.

10 for $12.00 Shipping of $5.00 Media rate or $15.00 Priority.

25 for $30.00 Shipping of $9.00 Media rate or $34.00 Priority.

50 for $50.00 Shipping of $16.00 Media rate or $66.00 Priority.

Please email for pictures, information and availability of certain Sets.

I have owned a Sony ICF6800W for a number of years.
It now has a problem where it is dead on SW the digital readout shows
88888 or similar - I now have a service manual and I have been advised

that apparently the VCO2 goes off lock - I have also been advised that
the VCO2 will not lock for long periods of time, so therefore there
must be a problem with one of the components - Has anyone managed
to ascertain which component is the faulty one with this fault - Any
help would be appreciated

FS: Kenwood MC-85 base station mike. This one is the one with the meter and controls in the base part of the mike. Checked for proper operation (hear it on the air), $100. plus UPS. By the way, be sure to read the "sour grapes" thread that will undoubtedly be attached to my posting here.

## 2126. Hallicrafters SX-28 question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-02-28 17:47:01 UTC
From: cdenker <cdenker@rochester.rr.com>
Message-ID: <Xns91C3823B1534Dcdenkerrochesterrrco@24.24.0.10>
Source record: 44054

Just picked up a nice Hallicrafters SX-28. The 1st RF Amp tube has a 6SK7 rather than the expected 6AB7. Was this a variant, or should I look for user mods?

I'm a novice, and plan to take my time with a restoration, starting with replacing the easily accessible wax caps. Any advice before I dig too deep? What would be the best order to attack things? How long before I have to go after the dreaded caps in the RF box? I plan to check all the resistors as well. The unit powers on (put it on a variac 1st), has a fair amount of hum, receives strong stations on AM BCB, but nothing on the other 5 bands. I'd be content to just look at the radio but hope to make it a fully functioning one.

Definately do a full restoration. Though a lot of work, that particular receiver is such a delight to use it would be a crime to just leave it on the shelf. The tube substitution is probably just that, someone put in what they had at the moment. You will find an excellent restoration article on this receiver at http://www.antiqueradio.org.halli12.htm.

Yes, replacing the caps and whatever resistors have drifted in the RF section is not easy, but eventually it has to be done. Just take your time and follow Phil's notes, which are an extension of an earlier article by A.B. Bonds. (Phil's photographs are excellent.)

I've spent a bit over three years of on and off time on my own SX-28, and though it is now playing very well, I still don't consider it finished. In my case, the cosmetic issues were more troublesome than the electrical ones.

You have the potential of a fine receiver there - take the time to do it right. It's a classic, and although there may be many that will outperform it, there are few that are as much "fun" to operate.

Before Drake finally got out of the business entirely of servicing the older HF radios, they sold off a lot of surplus parts stock. On there web site was an extensive list of items. I bought several myself including a couple of power transformers. I dug those out the other day and couldn't remember which rigs they were for (and they didn't *exactly* match one of my current Drake rigs).

Any chance that someone snarfed up that parts list and would share it with me so I can x-reference the Drake part no.? They no longer even post that list.

Yep, I've seen that page, it is excellent. While it doesn't make it look easy, it might be partially responsible for my current (over)confidence in being able to do it. I just hope I'm not going to find some vital component burned out and not be able to find a replacement.

>
> You have the potential of a fine receiver there - take the time to do

Agreed, mine cosmetically is very good, everything is intact except a speaker terminal; all the knobs are original and there are very few scratches on the paint. No cover, and no speaker, but that's ok. Even in it's dusty condition, the controls are marvelous. And for the listening I do, I don't need top-notch DXing capability, it's just nice to hear decent sounding broadcasts.

Can anyone tell me for certain if an R-390A will fit in a rack cabinet that is 16" in depth?

Thanks,

Denis Sharon W1AOK

Its 14 and 3/4 from the from panel to rear bolts.
Hope you plan to have a fan/ventilation setup.

It is sour grapes Mr. Linger. Sour for many of us who have purchased something from you via the internet that was broken and then were lied to when you agreed to pay for half the repair. Please pay us the money you owe so we don't have to sue you for it.

# 2146. Re: Hallicrafters SX-28 question

<< I just hope I'm not going to find some vital component burned out and not be able to find a replacement. >>

The most exotic part I found myself needing was an S-meter face to replace one that had cracked (a common SX-28 malady). Luckily I located a company on the net (Rock-Sea Enterprises) that makes repro dials for various vintage broadcast radios. Turns out they stock only one repro item for the SX-28 --- you guessed it -- it is the S-meter face.

Tubes, resistors, and caps can burn out, but replacements are easily found. If you find yourself in need of an SX-28 choke, IF transformer(s), P-P audio transformer, or main power transformer, let me know. I'm happy to help out someone who is really "stuck" for these parts, otherwise I'll be hanging onto 'em as my own spares : )

73 and good luck.....

# 2160. Heathkit SA 2040 -Someone who has worked on these

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-01 19:04:44 UTC
From: Scott <GAEL79@Peoplepc.com>
Message-ID: <u7vk6njntoud31@corp.supernews.com>
Source record: 44088

Hello all,
I just purchased a Heathkit SA 2040. I opened it up, to check its condition, which overall is excellent. I have a question about the connections of the internal balun, for anyone who has actually worked on, or seen the inside of their own tuner.

The Balun, T1, in my tuner, has 4 white wires. Two of the wires are marked with a white cloth tape, and two are not. Of the two that are not marked with tape, one goes to J4 and one to J5 ( the balanced wire hookups, on the back of the unit). Now to the problem. Of the two wires that are marked with tape, one is connected to ground, and one is tinned, but is not connected to anything, and it doesn't look like it ever was.

I don't have a manual yet, (so it may tell in the assemble procedures) but I did down load a copy of the schematic from the I-net. The schematic just shows three wires, One to J4, One to J5, and one to ground.

I would like help from anyone who has one of these units, and has hooked up the internal balun in the past.

Thank you,

Scott

Unless I'm missing something important in your post, you just put
all the 6.3 V heaters in parallel and sum the current draw. I'd
overrate the 6.3 V winding by at about 50%, to 150% of the about
6.7 A total draw of the above tubes. That means you need about
a 10-amp rating on the 6.3 V winding.

## 2170. FS: R4C noise blanker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 01:16:21 UTC
From: k9sqg@aol.com
Message-ID: <20020301201621.08402.00001182@mb-fk.aol.com>
Source record: 43998

Have a noise blanker from a Drake R4C receiver. Was unable to test it since I have no impulse noise here. R4C has been sold previously. Blanker is $100 plus UPS shipping, continental US only, please.

Thanks for reading the posting.

73s,

Evan

## 2171. FS: Hallicrafters S-41G

In response to several emails I've gotten, I'll post this follow-up:
This is for both the CE-31A and B model, and is the very detailed
owner's manual but does not have schematics. Lots of good pictorals and
troubleshooting flow charts, calibration and test material, everything one
would need except for schematics. I am looking for a service manual and will
make copies available here if I'm successful.

## 2174. Westinghouse Model 57

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 02:25:34 UTC
From: Walton <pwalton@interlynx.net>
Message-ID: <a5pd6v$j4k$1@news1.mountaincable.net>
Source record: 44002

I have just received a request from our local museum to do some research on
a Westinghouse Model 57 T.R.F. battery operated receiver. Wonder if anyone
might have some info on this model or could tell me where to start looking
it uses the UX series of tubes and was probably made in the early 20's....
Thanks Peter

# 2181. Serious Shack Sale: GPR-90, SX-28, PM-23, NC-46, Browning M3 Eagles!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 08:57:50 UTC
From: Bradley Stone <nb9mNOSPAM@reliable-net.net>
Message-ID: <u82g1dlcihq3c5@corp.supernews.com>
Source record: 44019

Folks:

This equipment is first rate stuff - serious bidders only please!!

1944 Hallicrafters SX-28

With original cabinet, nice deco trim unmolested. Beautiful panel. Shiny. Works, but could use re-tubed , aligned, switches cleaned,etc. Great audio with very little hum. Chassis is dusty but no corrosion. You will have to look far and wide to find a nicer one than this one, which came from Chuck Dachis' personal collection. With excellent manual reproduction. $450.00 A real looker.

1945 PM-23 Speaker

Clean, carefully and competently repainted/restored. Original speaker, nice sound. $100.00.

1956 GPR-90 Receiver

The best I've seen. Near perfect panel, great performer. A truly rare and desirable general coverage cruiser with push-pull 6V6 audio. Chassis is dusty, with some minor corrossion. One problem-the original case is slightly deformed (UPS idiots.) I have a (non-original) replacement for an extra $40. This GPR-90 is the older model, without the crystal calibrator. With original manual (poor-average condition). $450.00.

National NC-46 with Rare Matching Speaker

This one is nice, but need some cosmetic attention to be "collectible" condition. There is some rubbing of the silkscreening on the otherwise fine front panel. Needs some cleaning. Speaker is truly nice, with the original grille. Dials/controls all work smoothly. Some hum in audio, but receives fine. Reportedly re-tubed and re-aligned. An unusual, deco-styling. No manual. $150.00.

Browning Golden Eagles (Mark 3)

You will NOT find nicer Brownings than these cosmetically - they are nearly perfect. The chassis, front panel and covers shine like new. The receiver has been retubed and checked out (the dial calibration is slightly off - a simple set screw issue.) Transmitter passed a superficial check on AM/USB/LSB. No mic. With manuals. $375.00. Becoming real collectibles!

---------- Small Print ----------

Prefer pickup, and will meet half-way up to 150 miles. Shipping costs will not be insignificant for the SX-28 and th GPR-90. Shipping costs (including

any packing material I have to purchase) is not included! Prices are non-negotiable - I can get this easily on E-Bay, but don't want the "rif-raf." Will take pictures if needed - I have a digital camera at hand.

## 2184. Ten Tec Triton 540 w/+++xtras

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 14:31:55 UTC
From: ljl160@aol.com
Message-ID: <20020302093155.07510.00000954@mb-ce.aol.com>
Source record: 44011

Selling my nice Triton 540 with noise blanker, cw filter module. a D104 with G Stand, and manuals. Will also include the matching vox power supply and the hard to find 242 VFO. The 540 went back about 1 1/2 years ago to Ten Tec and got new finals and drivers, alignment and pto rebuild done at $229.00. Everything plays well and looks very good. $400.00 firm and I will not separate items. Thanks for reading and 73s Lew KlNDV

# 2185. NEED Drake RV-75 RIT cable schematic

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 14:47:19 UTC
From: k9sqg@aol.com
Message-ID: <20020302094719.03507.00001509@mb-fl.aol.com>
Source record: 44012

Seem to have misplaced my schematic for the RIT cable/adaptor for the RV-75 digital VFO. It consists of a RCA phono jack inside a 12 pin Jones plug, with an internal resistor I believe.

Thanks.

73s,

Evan

# 2188. New Domain - k7on.com

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 18:39:08 UTC
From: Brian Short <k7on@earthlink.net>
Message-ID: <MPG.16eb29648820ad1a9896e7@news.earthlink.net>
Source record: 44015
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.digital.misc,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

I have registered a new domain k7on.com and my web page
will be re-located on managed servers with high-bandwidth
connections.

Please replace any bookmarks or links with:
http://www.k7on.com/

For the time being, while DNS caches update, I will
keep the qsl.net/k7on web page online, but expect no
updates.

Thanks, Brian

I have a Macaw PRM-1 watt meter that has a flaky 5 position switch in it
tried to claen etc. but still acts up. its nothing fancy about the
switch double wafer 5 position.
Anyone have one laying around in thier junk pile?
thanks chris NI4L

From: Moore, Bill, NC1L
[mailto:bmoore@arrl.org]
Sent: Friday, February 08, 2002 12:31 PM
To: 'Richard B. Drake'
Cc: DXCC
Subject: RE: Professionally Printed and
mailed eQSL's
Hi Rich:

Something does not sound right here. You are
saying that Dave is physically mailing out QSL
cards by the US postal system? This is news to
me.

If you are my QSL manager and I send you my
logs by e-mail, I am sending them direct from
point A to point B. Just as if I was sending them
to you by regular mail. This is OK. I remember
somewhere several years ago that some people
used to get their logs over the air on RTTY and
another digital mode (AMTOR I think). Not a
problem.

However, if as the result of a log being sent to
E-QSL, someone goes in and receives a card
electronically and uses it for DXCC, that
e-QSL cannot be accepted for DXCC credit
under rule 2. I spent a bit of time with a simple
shareware program to prove the unreliability of
that method.

However, if Dave, acting as QSL manager
with station logs completes a card (even
one from his printer) and sends it by mail to
you, this is an acceptable exchange and we
have see this often for several years now.
(assuming he phyiscally checks the log). Many
people use self-made cards from their printer.
Each one is evaluated on a case by case basis,
and many times under Section IV rule 4(b) we
have conducted an audit to insure the vaildity of
a card like this.

In cases like this it would be REAL nice if they
used a stamp or placed their initials or signature
on it, but this is not required by the rules.
However, this issue has been discussed and has
been given some consideration.

To clarify, if Dave is sending out cards
through the US Postal System as the result
of the log(s) he receives, this is OK. (This
would basically be operating as QSL
manager).

Regards,

Bill Moore NC1L
DXCC Manager

# 2192. FS Heathkit DX35 and VF-1

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-02 21:20:18 UTC
From: Charles Hugg <chashugg@earthlink.net>
Message-ID: <mmbg8.29337$ZC3.2382725@newsread2.prod.itd.earthlink.net>
Source record: 44020

I have for sale a nice Heathkit DX35 with accessory Heathkit VF-1 VFO. Included are the connecting cable and plug to attach the VFO to the transmitter. These units look to be in nice shape. The wiring job on the transmitter is great and the components above and below the chassis looks very good. There is a slight bend in the chassis where it has been bumped, but this does not appear to interfere with the operation of the transmitter or show with the cabinet in place. I applied power to the DX35 and all tubes light up and no smoke, but other than that I have not checked it out. I have no manual for the DX35. There is a copy of a manual for the VF-1. Price is $165 plus shipping from 79602. Digital Pictures are available upon request. Thanks, Charlie Hugg, K5MBX

# 2193. WTB: DX-100 or APACHE

Knight TR-106 transceiver with the matching V-107 VFO unit
and cables.

This is a 6m AM rig with built-in speaker. Silver and blue
with a great styled case.

Front panel looks really good. Has all original knobs.
It is NOT in mint condition, but shows less than normal wear.
No bad dents or dings.

The power cable to the TR-106 is missing but you can easily make one.
I have not tested it but it is all there. No modifications or damage
has occurred.

Will sell for $135.00 plus shipping

I don't know whether it would help, but I recently approached Drake
via their web site for a manual for a 30 year old radio and they were
able to come up with an original manual at a cheaper price than
dealers were asking for photocopies - see their web site.

# 2204. TMC wattmeter measures real power!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-03 11:41:50 UTC
From: Antonio Vernucci <vernucci@libero.it>
Message-ID: <a5t251$h9s$1@serv1.iunet.it>
Source record: 44032

Most through-line RF wattmeters (e.g. Bird) measure power in indirect manner, i.e. by summing DC voltages proportional to the RF voltage and the RF current on the line. This is the reason why such wattmeters do not show real power in case of an AM transmitter 100% single-tone modulated (they should indicate 50% more power under modulation, but they actually don't). Recently, I bought a TMC antenna tuning system (model ATS 2A/50 - MCU 2A/50, part of TMC transmitter GPT-1K) incorporating a wattmeter with a big two-needle meter. With my surprise, I noted that when I modulate 100% my 60-W AM transmitter, the wattmeter reading grows from 60W to 90W, this fact indicating that the wattmeter design accounts for the power increasee due to modulation. I cannot open the sealed sampling line of the wattmeter, but it looks quite normal, i.e. a plain cylinder joining two HN-type connectors and having two feed-through capacitors, that are connected, via adjustment potentiometers, to the the FWD and REF lugs of the two-needle meter. The circuit is purely passive (I keep the equipment disconnected from the mains). Can anyone explain how TMC succeded to do this, or does anyone have the schematic diagram of that wattmeter (I would reimburse reproduction expenses and postage for shipment to an US address).

Thanks & 73

Have two Hammarlund speakers for sale. These are the gray color ones and match the HQ line.
One is the "large" size with the logo and enclosed back. Price is $85.00 PLUS shpping. It is very good cond.
The other is the smaller virsion with the open back and no logo. It is in good cond with some minor scuffs. Price is $45.00 plus shipping.
Here is the link for pictures of the two

MFJ Model 784B DSP Filter, as new, current version, box, manual $119 shipped

Vibroplex Standard Original Bug very nice condition, grey base, all chrome
is nice, serial number is 263352, made in NYC
$99 shipped (can send pic if interested)

Buxcom digital interface for Icom radios that use an 8 pin din for accessory
input. Model R-5, like new, complete with all paperwork, cables,and
software, factory assembled, not a kit. I used it on a 756 PROII and 746 it
worked great. $33 shipped

Two MFJ MIC/TNC switches:
Model MFJ-1272BX 8pin (pk232)
Model MFJ-1272MYV RJ-45 (kpc-3)
They can be rewired if need be for other tnc's.
they have also been used as a basis for soundcard digital interface projects
$20 each shipped , $35 for the pair shipped

MFJ -900 small 100 watt antenna tuner nice condition, few light scratches on
top, works good $30 shipped

VHF/UHF Manual by G.R. Jessop G6JP, hard cover 4th edition put out by the
the RSGB. Full of excellent data and projects $13 shipped

SM-2 Space Magnet vintage AM BCB Loop antenna made by Worcester
Electronics. mechanically exc, electrically is intermittent at times, might
just be a loose wire or input cable. If you are into BCB DX'ing you may have
heard of this one, it was one of the top antenna's in its day. Uses a 12"
long by 1/2" dia. ferrite rod. $50 shipped (can send pic if interested)

Radio Shack DSP filter, good condition with manual $35 shipped

please email for more info if needed
Thanks
Tim

I am not familiar at all with navy ship radios, but would they have been powered by a standard AC line
like the seller suggests? I would think that this had to be a land use radio.

Did some research not a Scott,
Probably a Browning. Also it could be something
Hallicrafter's came up with. But my thoughts are Browning.

# 2216. military aircraft receiver CRV 46151

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-03 19:35:41 UTC
From: Phil Nelson <philnelson@antiqueradio.org>
Message-ID: <hWug8.33393$0C1.2675359@newsread1.prod.itd.earthlink.net>
Source record: 44042

On a field trip to an old dude's abandoned radio workshop, I spotted a little military aircraft receiver, model CRV 46151. There were other military-looking components nearby, but I didn't catch their numbers. Mil stuff is not my cup of tea, but in case anyone is dying to get one of these, I can put you in touch with the owner. He offered to sell me the whole little workshop full of mostly-junky stuff for $50, so I imagine the price would be reasonable.

Phil

# 2217. Antenna L & C Loading Comonents

Newsgroup: rec.radio.amateur.boatanchors
Date: 2002-03-03 20:00:50 UTC
From: Reg Edwards <g4fgq.regp@btinternet.com>
Message-ID: <a5u0nn$9rcjm$5@ID-124126.news.dfncis.de>
Source record: 44043

```
NEWLY AVAILABLE Program "ADDALOAD.exe"
======================================
A random length antenna wire may be made resonant at a particular frequency
by inserting either a coil or capacitor at any position along its length.
For overall wire length, wire diameter and location of the loading
component, the program computes either C picofarads or L microhenrys
depending on sign of the required loading reactance.

Greatest wire length accepted is 1 wavelength at the resonant frequency.
Results apply either to a vertical antenna wire or to both halves of a
centre-fed dipole.

The program has an educational facilty to slide the loading component along
the wire while observing how it changes value and type.

Download from website below program ADDALOAD in a few seconds and run
immediately.

From: john smith <radiodaz@concentric.net>
Message-ID: <a5ubdm$432@dispatch.concentric.net>
Source record: 43959

I need some info about the CDE HAM III and HaM II rotators.
Are these interchangeable , looks like they are the same but the wiring on the back is a little different . Any info appreciated . I cannot move my beam on twenty meters and am using the Ham III. I have a spare Ham II control and am hoping the problem can be fixed by changing control boxes..
thanks tim
